I believe the mod was done by A.R.E. communications. I have one, and is
good from 500kHz upto 2 gigs. Obviously the HF aspect is not as good as
a dedicated HF rx. I version I own also has the TV receiver adaptor as
well.

I have two SP10 Motorola handheld units with batteries and wall chargers. These units are in great shape and have PL (currently set to 154.570 and 110.9 PL).

For those not familiar, these are 1 watt single channel units that are dip switch programmable to the many standard vhf intinerant / business frequencies, so is the pl board.

$135 for the pair.

Please email me directly

Thanks,

Charlie...

AdamGuha <adamguha@aol.com> wrote:
>Is this the right NG for this? I want to become a ham, I bought a
>Hallicrafters SX-71, what do i do next?

Hi Adam,
String a long wire antenna from the radio to outdoors, preferably to a high tree (away from power lines). Don't let the antenna wire touch any metal other than the antenna lead-in terminal at the back of the radio. Also, run a wire from the radio's chassis (or "ground" terminal) to a cold-water pipe (if nearby), or a copper rod driven into the ground. Now you're all set to listen!

The higher frequencies (say, above 15 MHz [15 Mc/s on your Halli dial]) will be the place to listen during daylight hours, and below that during nighttime hours.

I don't recall if the SX-71 is a ham band-only, or general coverage receiver; if it's general coverage, you can keep the BFO turned off while tuning the non-amateur frequencies - you'll hear international broadcasters in far off countries. While tuning through the ham bands, keep the BFO on; when you come to what sounds like a voice transmission, fiddle with both the tuning control and the BFO until the voice sounds natural. You'll quickly get good at this. You'll hear a *lot* of Morse code transmissions between hams at the lower end of each ham band. You'll have to be able to "decode" such transmissions to receive a license (luckily, only knowledge of 5 words per minute is necessary for the beginning-level license, the Novice).

On your next trip to Radio Shack (or to a ham store), ask the sales person to help you with purchasing a study guide for amateur licenses, and start studying! 30 minutes per day is fine. That store should also have code tapes to help you get started with learning Morse. I'd suggest you alternate between the code and the study guide - maybe 5-10 minutes with the code, and 10 minutes reading the guide, then back to the code, et cetera. When you're done for the day, go have a beer as a reward!

Also, ask the salesperson if a radio club exists in your area. The club members will be your greatest resource for answers and future equipment information. The younger guys might not know what a Hallicrafters SX-71 is, but the older fellows will smile when you tell them what you've got.

Feel free to write me if you have any questions at all.

73 ("best regards"),
Jeff KH2PZ

1382. Re: Stumpjumper/BARF facts

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-29 00:00:00 UTC
From: w4nti@cannet.com
Message-ID: <6i7f6b$n87$1@nnrp1.dejanews.com>
Source record: 173302

I find it interesting that only three (3) people bothered to reply to my posting about the Stumpjumpers/BARF group. Out of the three, two jumped me because of my Vietnam experience. The other, Mr Smith, is the only one that has any understanding at all of what I was saying.

My Vietnam escapades have NOTHING AT ALL to do with what I said. This just goes to show me that the American public, to this day, is still BRAINWASHED by the commie media of the sixties.

Shall we now get back to the subject please? First off I will be the first to admit that I have indeed been guilty of what I call "retaliatory jamming".
I have indeed jammed those that have jammed me. I apologize for that. It has not happened for a while now, and it will not again from W4NTI.

However, the jamming from the opposing camp still continues. And actually has gotten worse. I at least am man enough to admit my shortcomings, and doing so am able to modify my actions. Can we say the same about others?

I am seeking all those right minded individuals, that want this crap to end, to assist in eliminating a serious problem to Amateur Radio. That is unlicensed, illegal operators.

I ask for help from anyone in the McKeesport PA. area to track down and provide me with the address of a operator going by "Frank Todd".

I ask for help in locating the gentleman known as "Captain Truth". Believed to be in the Hickory NC area. This information will be forwarded to proper authorities. Your input will be kept in strict confidence.

If you folks will care to note, Frank is jamming us, Captain Truth is jamming Al Abernathy.

I do not condone, nor should anyone else, illegal operation.

Actually "73" was a term the old telegraph operators would use back in the old west days. It meant that they owned a Winchester 1873 rifle (their most prized possession) and that when they died they would give it to the other operator. Hense '73' meant I will will you my 73 rifle. '73s' meant you had more than one rifles that you would give to them (they were a really good friend.).

1385. USE OF HI? Lots on CW...

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-29 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6i7cqf$1o9$1@w3eax.umd.edu>
Source record: 173305

My policy is that on phone, if you're gonna laugh or snicker, just
laugh or snicker.

On CW, that's not really possible; if I think something's funny, or
want to break in with a laugh, I'll send (or receive) HI HI or HEE HEE
or rarely HAW.

One nice thing about CW is that ambient noise in ones local environment
is NOT transmitted. I can remember many instances in which I've been
at club meetings where people were literally yelling, while I was
sitting and yakking away at CW...I even remember being poked with a
stick and spoken to on numerous occasions to try to make me mess up...

From: Kevin Lanning <kevin.lanning@eastgroup.com>
Message-ID: <fX621.7$Qv5.24412@katana>
Source record: 173162

Why not consider the MFJ CW/SSB 6m rig for under $250. SSB is the mode of choice on the east coast. I have seen several good reviews on the MFJ. Just a thought.

Robert Casey wrote in message ...

Anyone tell me anything about an Icom IC-970? bands covered?, all-mode? when made? what one might be worth? accessories? any good?, whatever you know...

I saw a reference to the radio in Amateur Radio Trader, and it mentioned that it operated at 1.2Ghz. Kind of got my attention, and I would like to know more about it.

Please post to newsgroup.

Thanks in advance for any help!

Source record: 173317
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH UPDATED: 09:20 UTC, 30 APRIL

/\

For details and current auroral imagery from the POLAR spacecraft, visit:
http://solar.uleth.ca/solar
and
http://solar.uleth.ca/solar/www/aurora.html

ALERT:

We have observed the arrival of an interplanetary shock front passing the ACE and SOHO spacecraft at the L1 point. The shock front should impact the Earth at about 09:46 UTC on 30 April. This marks the leading edge of the first solar coronal mass ejection. It should result in some mild intensification of auroral activity over the high latitude regions (and confined to those regions for now). Within a few hours, the main phase of the disturbance should commence which is expected to result in more widespread intensification of auroral activity, and possibly some equatorward migration of the auroral ovals to slightly lower latitudes. At the present time, conditions are not yet particularly favorable at L1 for inducing large increases in auroral activity. So conditions here at the Earth will likely remain quiet until at least 10:00 UTC on 30 April.

It looks as though European and Australian/New Zealand regions will be best placed for observing the main phase of auroral activity associated with this disturbance. Extreme western sections of northwestern North America may also be able to spot the initial phases of intensification. However, morning twilight conditions may prove prohibitive.

We will continue to monitor conditions closely.

PLEASE REPORT ANY SIGHTINGS YOU MAKE TO:
http://solar.uleth.ca/solar/www/auroras.html

To obtain your own realtime analysis of current conditions on your own home computer, consult:
http://solar.uleth.ca/solar/www/swarm.html

1407. Mods for Ten-Tec Scout

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-30 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <354859C5.A49BCCAE@asu.uswest.net>
Source record: 173319
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.dx

I was thinking about constructing a multiband adaptor for the TT Scout. Something that would accomodate all my 7 band modules (80-40-30-20-17-15-10) in a box, with a band selector switch. Quick and easy band switching that way. Anyone think/try this yet? Also, what about homebrew/modded modules for 6M, or a second/remote VFO?
I would think at least the module box would be quite do-able. Comments, suggestions, warning all gratefully accepted.

> Thanks in advance for any help!
It comes as standard with 2M & 70cms.
Options include a built in AC mains supply,23/24 Cms & 13 Cms modules,
a general coverage rx from 50-905 MHz (AM,FM & wide-FM but no SSB)
& an ATV module (old-fashioned AM modulation video -in Europe most of
this
is FM Video so no use to me).
I have the AC power supply,23 cms & generla coverage options.
It's a physically large box but at leat it's all in one unit.
They stopped importing the IC970 into Europe a couple of years ago
-special
order only.It's probably still on general sale in USA & I'm glad I
bought one.
It gives me all modes on 3 amateur bands.
Try ICOM's website for more details.

It's not that no ham has guts....it's just that most hams are smart
enough to not want to waste their time going to the house of a
complete idiot.

Do you have dual personalities Burt? Which one do we talk about on
the net? Which one teaches impressionable young adults? How do you
keep them separated? Do you ever get them mixed up? Why do you act
like a child on the net? Are children the only people you can deal
with effectively? Do you teach because you are a control freak and
can control children much easier than you can adults? When do you
plan to grow up?

>
>
Hello,

It's a nice story, but it has no basis in fact. The actual source of "73" and "88" was the list of numerical abbreviations used by wire telegraphers. These abbreviations were used in a manner similar to Q signals today. Here's a partial list of number abbreviations:

1 - Wait
2 - Important business
3 - What is the time?
6 - I am ready
7 - Are you ready?
12 - Do you understand?
13 - I understand
14 - What is the weather?
17 - Lightning here
19 - Form 19 train order (used by RR)
21 - Stop to eat
23 - All copy
24 - Repeat this back
30 - No more, end
31 - Form 31 train order (used by RR)
44 - Answer promptly by wire
73 - Best regards
88 - Love and kisses
92 - Deliver promptly
134 - Who is at the key?

Note that American Morse was used by landline telegraphers. The signal "30" in American Morse is "..._. ____" (zero is an extra long dash). This was corrupted into a single character, "..._._" which is usually thought of today as SK or VA, with the space between letters removed.

From: "Christopher W. Buckley" <cwbuckle@mtu.edu>
Subject: WTB: Small Directional Antenna.. Suggesstions?
Newsgroups: rec.radio.amateur.antenna
Organization:
Summary:
Keywords:

I, being a new ham, an EE major, and out of $$, have decided that instead of buying a rotor, I'm
going to build a small one, which mounts on a tripod, and has azimuth and elevation rotors. I've
got all the junk I need for that, but now for the critical part- the antenna.

I'm looking to buy a small directional antenna. I was really considering the AO-27 antenna that
Arrow Antenna has, but they won't tell me any specifications on it, like bandwidth, gain, or
anything, so I am suspicious. Anyway, if someone has done a little testing with this thing and has
any comments that would be great. I'm hoping to use this for general portable work, though, not
just AO-27, so I'd hate to sink my $$ into an antenna which would be good for nothing else.

If you have any suggesstions for an antenna, or better yet, if you have one you'd like to sell me,
let me know! Currently my requirements are-

Light/Small:
I'm using a couple of stepper motors for the rotors, and I don't thing they'll handle much over 5 lbs. of antenna after I'm done with the mounting business.

Directional:
What would be the point of a rotor otherwise?

Dual Band:
I would like to be able to operate from 146-148 and 437-440 at least. Big plus would be 440-450 operation, though.

Duplexer:
I'm hoping to just plug this thing into my HT and go, without an external duplexer.
But this is only a matter of convenience. If you have an antenna/duplexer combo, I would be interested in the two together.

Other plus's woud include wider operating frequencies to cover the top part of 70cm and the lower
part of 2m, BNC connectors, and circular polarization.

Thanks,

Chris Buckley

Hi Burt,
Why would any ham want to knock on your door after you have done nothing but spout negative things against them? Are you asking them to confront you at your home? That could very easily lead to a violent confrontation. Why in the world would you want to bring that down on your wife and daughters?

Think man. You can do what you wish to yourself. But, if you are the family man you claim to be then you have a responsibility to keep your family out of harms way. Not invite it into you home.

For Sale, Henry 2K-2 Amplifier

I have a Henry 2K-2 floor console Amp for sale. It is in very good condition. It runs a pair of 3-400Z tubes that have full output 1400+ watts output. It works on 10 through 80 meters. Has tuned inputs. It uses forced air cooling with chimneys on each tube. It will run eater 3-400Z or 3-500Z tubes. Very clean inside and out. With book.

$700.00

Will not ship, but would meet within 200 miles of Eureka Ca.

1429. vintage vs. new HF rigs and feature overload

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-30 00:00:00 UTC
From: daj@ccrma.Stanford.EDU
Message-ID: <6iagoe$gh2$1@nntp.Stanford.EDU>
Source record: 173341

This is one of those painfully-open-ended questions. Please excuse me for asking it. But I thought I'd give it a try anyway...

Perhaps there's an FAQ or (even better) some hard-boiled hard-won advice.

The basic question is (are) "how the heck can I figure out which HF rig to buy??" and "I'd like to upgrade from my vintage HF rig... what improvements should I expect to see?"

I was active in the mid 60's as a teenager in New Jersey. I had (and still have there) a Heathkit SB301/401 and an SB200 linear amplifier with a 2 element triband beam and dipoles for 80 and 40. I enjoyed DXing, CW, SSB, contests, message handling and sometimes rag-chewing. So I'm not really an "HF beginner", as I've worked nearly 200 countries (if I remember right), WAC, WAS, etc. etc. But I'm certainly way out of date. After nearly 30 years of inactivity, I've recently picked up a VHF/UHF HT and have been using it in the car and on hikes. However, I still miss talking to poeple in far parts of the world, etc. I also enjoyed CW and have discovered that I can still copy it pretty well (20 wpm or so). I'd also like to explore the more modern modes, the new HF bands, etc. I now live in California, by the way.

So I'm wondering how to make sense of the plethera of features and HF rigs out there, and the wide variety of price. For example, if I were to pick up an ICOM, Yaesu or Kenwood rig in the 1K-2K$ price range, how would that compare in quality to my old Heath rig? I gather that it would have a substantially more stable VFO, that I wouldn't have to tune the transmitter by hand (right?), that it might have some receiver features for noise reduction and such, that it would have support for digital and other modes, that it would have memories and other convenience features, etc. Would the receiver in this price range be significantly more selective/sensitive than my old Heath? Also, do the various manufacturers have certain consistant advantages in certain areas? (E.g. something like "Kenwood receivers are particularly good", "Icom user interfaces and PC compatability are particularly good" or whatever.)

Assuming that money is not an issue (it is, but let's just pretend it isn't), how much better are the more expensive (say 3k-4k) transcievers? What do you really get for that? Is it just a question of advanced features that only the most fanatical DXer or contester needs? Or is it an order of magnitude difference with respect to sound quality, usability, etc?

What about these new HF/VHF or HF/VHF/UHF rigs? Is there a price you pay (in terms of HF performance) for having the VHF/UHF support there?

What about the smaller HF rigs like the Icom 706 MKII? Does it have all the essential features you need in an HF rig and just has a smaller user interface, or is there a big sacrifice in features and quality in order to make it small?

I'm particularly interested in hearing from people who have worked extensively with a variety of rigs by a variety of manufacturers and have a sense of what the strengths and weaknesses are.

Finally, I again apologize for the open-endedness of this question.

Coming to the Dayton Hamvention?

Be sure to stop by Kentronix -- spaces #2314, 2315, 2316. Look for the
KENTRONIX banner hanging over our spaces as you exit the rear of Hara Arena.

Dealers in used electronic test equipment since 1977. We buy and sell
electronic test equipment, coaxial and waveguide components,
laboratory standards, power supplies and manuals.

Now this has to be the lamest thing I have ever seen.

Do you have to stay up late thinking of this or does it just come natural?

If you think Burt's posts are that bad then don't read them.

Burnt, they ARE saying "HIHI" on voice. They DO sound like idiots. What is inappropriate about using "HAHA," whether on voice or cw?
Maybe we should all start "HOHOing" like Santa or "HEHEing" like the Japanese girls do?
And I would prefer not to visit your way cool website - I've got a life.

This type of attitude is just what we don't need. As stupid and
unfounded as BURT's statements are, it is the second amendment that
allows the freedom of speech to remain. Only when the goverment fears
the people can there be freedom. When the people are disarmed and
unprotected then the government will be able to control all the other
FREEDOMS that we now enjoy. Imagin FREEDOM of SPEECH as long as you say
what I want you to, a FREE PRESS if you print what I want you to,
RELIGIOUS FREEDOM to belive in what I want you to, and so on. Guess
what, you don't like it tough shit. This is the begining of the bill of
rights as supported by gun "control" people.

Well, there may be a lot of appliance operators who just lay out the big bucks, but lots of otherwise-deprived hams will go to a friend's house for a big weekend, or reactivate some old equipment nobody else wants. There are even still a few people left who follow the old ham tradition of doing it all yourself.

I do not have to. What you fail to realize I am in the normal world where
most people think like me. It is only in the ham world I am thought odd.
When my students do listen to ham radio they say, "you do not talk to those
losers, do you."

Do you teach because you are a control freak and
> can control children much easier than you can adults? When do you
> plan to grow up?

Actually only hams are easy to control.
Kids today are far more challenging that the typical LOSER ham.
Kids are ALIVE!

If you have the KPC3 in terminal mode (hooked to your computer via
a serial cable) Just type:

INT KISS
(after changing the INT mode, you have to do a soft reset
for the new mode to take effect) Just type RESET

Tot Ziens!

clipped:I have been to your web site, I even gave you the courtesy of logging into your
guest page. I noted in my log in that you seemed to be a little on the anti-gun weinie side.

After reading some of your posts, for what it's worth, I have concluded that you are the
most un-informed anti-gun weinie that I know. I won't waste my time trying to point out
to you some of the flaws in your reasoning about guns. You come across as either to
stupid and/or to closed minded to listen. I hope, for your student's sake, that you are not
as close minded when you are in front of your class.

By the way, I have been in Ham Radio since 1964 and had not, until I saw you crying
about the ARRL pulling your VE certification, joined the ARRL. Lately I joined and
enclosed a letter telling them that the reason I was joining is that if they are on the ball
enough to weed out an ass hole like you that they can't be all bad.

If one of your students screws up do you punish the whole class ..? That seems to be your
mentality when it comes to guns, some one commits a crime with a gun and you want
to punish everyone by taking their guns. I would like to hear you cry, like you did about
losing your VE certification, if because some fool got drunk and ran over and killed a
bunch of people the police came and took your vehicle.....think about that, if your capable.

1446. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ib7nu$9hk@news.Hawaii.Edu>
Source record: 173110
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

The best way to avoid this kind of problem is not to tell anyone about a better deal or anything else....If the equipment is not what you want, so be it.... what is the reason for telling anyone that the equipment they are selling is less of a deal than someone else.....Even if a seller fails to disclose the information you need to make your mind up, it still is your choice.

I have one of those old telegraph sounders and the corner box to direct the sound to the operator.

I just can't imagine listening to that for 10 or 12 hours a day. I hope they paid those guys good!

While the Armed Forces start with rifle training from the start,
I believe that hand to hand is basic. Start with a defensive art
such as Aikido, move into hard forms then to hand weapons such as
knives & swords. Finally train in guns.

The basis for all military (martial) arts is breathing. If you
are not relaxed, not at peace, you will never master any form.
Try hitting a target with an M16 at any range greater than 100 meters.
If you tense up, you will miss. I know, I have soldiers and officers
that can not qualify.

Being a warrior is part of all of us. Just as we are to be scholars
and diplomats. The first amendment covers the right to form your
beliefs, that is freedom of religion (scholar). And to communicate
your beliefs, freedom of speech (diplomat). The second amendment is
about protecting beliefs from unjust oppression, to be a warrior.
The hormones that drive our sexual urges, drives our violence. Both
need to be disciplined. Developing the warrior in us beings about that
discipline.

It really belongs on "Talk.Politics.Guns".

BTW, the gun folks are bit smarter than we hams. If the talk turns
from just recreational topics to political, it is suggested that the
thread is to taken from Rec.Guns to Talk.Politics.Guns. We need to
move our "political" discussions from the recreational groups (to include
shortwave and scanner). Maybe have a group called Talk.Politics.Radio.

I believe that Talk.Politics.Guns is the perfect place for such
discussions.

The gun folks usually move a topic from Rec.Guns to Talk.Politics.Guns
by use of the "Followup to" option. Maybe they have learned to be a
bit more civil.

The biggest improvement will be the WARC bands. Those old radios
won't cover 30/17/12, and those bands are finally, really happening.
If you operate CW at all, you can't be without 30M, imo.

With the dsp radios, you can tune out the QRM better, actually
I find it most useful in voice modes where there's someone like just
a little up or down the band and you edge 'em out while -- at the expense
of having a slightly more 'muffled' sound. Though this is somewhat
offset by the fact that there's just more junk that puts out noise,
nowadays -- so I get more birdies than I remember in the old days.
I can set my filters perfectly for SSTV -- and avoid the QRM. Strangely
I find that I keep my CW filters set wider than I thought I would.
Mostly I'm fishing through pileups, trying to hear the DX, which I can
never pick out.

All of the high end radios and the low end ones, I think, have FSK
inputs, which makes stuff like rtty and Pactor pretty much a plug in.
The hardest part is remembering which key to press. With a long
CQ, I can usually raise someone on Pactor, on a typical weeknight.
I also hear a few South Americans on Pactor though I haven't made
a goal out of working the DX on this mode. I don't know about everyone
else, but it seems like I'll hear nothing on the band, call a LOOONG
CQ, and then I'll hear other people calling CQ also.

The new radios have computer control, and I mean to send away for CT-log, but haven't done this yet. Supposedly some guys have a deluxe contest setup that keeps track of what frequency you're own and makes the log and everything. I've been calling people during contests but really can't get organized enough to send a log in, so I'm thinking this might be a way to do this easier. (These guys keep really good tabs on dupes, and seem to get annoyed if you work them more than once.)

The $3-$4K radios have dual receive, which I've never had. Supposedly you can get one frequency in each ear. I'm curious myself how useful this is. Seems to me like the hard core guys have FT1000's of some variety or another, and some kind of Alpha amplifier. And the next rung down have TS850's and Ameritron amplifiers. Mostly unscientific data compiled from RIG IS XXX brag tapes.

The feature of the Kenwood radios, I didn't expect to use are the big friendly buttons on front for the CW/voice keyer. (Get the DRU-3 if you go Kenwood.) But, it's pretty cool to swirl the dial around and pop the 'DE KE6I' button, conveniently next to tuning knob, when you think the DX might be listening.

I have all these frequency memories which I hardly ever use. I think I set one to the Friendly net on 3908 and another to 14.230, if I just want to let it sit and receive pictures. But, really it doesn't seem that big a deal to turn the big knob.

1467. Best Portable Radio for Emergency como in mountans ?

Newsgroup: rec.radio.amateur.misc

Well, to add more confusion - but present an actual scenario: I used
to have a Larsen 1/2-wave 2M thru-glass antenna and it did very well,
only problem was the size of the mounting pad interfered with my
windshield wiper. Was not happy with my Larsen 1/2-wave 440 MHz
antenna so to solve both issues I removed both antennas and replaced
with a Larsen 2/70 dual band mag-mount. I then had to add a diplexer
as my radio does not have one built in.
RESULTS: 440 MHz was extremely better (went from 1/2-w to 2 @ 5/8-w
colinear) and the 2M was slightly worse; there are a couple of

repeaters that are 2-3 S-units lower in signal and a distant one that was often workable that is now sometimes workable. For repeater usage it makes essentially no difference, if you use simplex a lot it may matter. Overall, I have benefitted from moving from a glass mount to a mag mount, and would recommend the same wherever possible. If you really must use a glass mount, please spend the extra money up front (not as much as you might think for what you are getting - better matching, better coax, better overall material and construction for about $15 - $20) for a reputable manufacturer (and yes, there are other reputable antenna manufacturers besides Larsen - I just happen to like them for their value and honest spec's).

Hope my longwinded response helps,
73,
Howard KE6MAK

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case
-Manual

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

SEVERE STORM : 15 % LOW LATITUDES : MINOR
MAJOR STORM : 20 % MIDDLE LATITUDES : MINOR-STRONG MINOR

MINOR STORM : 35 % HIGH LATITUDES : STRONG MINOR-MAJOR
ACTIVE OR LESS : 30 % POLAR LATITUDES : STRONG MINOR-MAJOR
--- ---
PROBABLE SI ASSOCIATION : 90% ESTIMATED GLOBAL IMPACT: MINOR-STRONG MINOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 25 TO 35
---- ---

COMMENTS:

This warning is being extended to cover the 02 to 03 May time-frame in response to the large coronal mass ejection that was associated with the last major class M6/3B tenflare from active solar region 8210. Scientists from the SOHO spacecraft LASCO team suspect this latest coronal mass ejection may have a trajectory more nearly toward the Earth than the last coronal mass ejection (which impacted the Earth at 09:30 UTC on 30 April and was not very geoeffective). As a result, the arrival of this latest coronal mass ejection on or near 02 May is expected to have a larger impact than the last disturbance did.

At the present time, we expect this latest coronal mass ejection to impact the Earth near 12:30 UTC on 02 May, give or take several hours. It might arrive as early as approximately 22:30 UTC on 01 May (later today) or as late as 01:00 UTC on 03 May.

For realtime data, consult: http://solar.uleth.ca/solar/www/swarm.html

** End of Warning **

1471. AURORA WATCH: Extension of the Middle Latitude Auroral Activity Watch

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH EXTENDED: 04:15 UTC, 01 MAY

/\

ACTIVATION: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 04 MAY

HIGH RISK PERIOD: 02 MAY (UT days)
MODERATE RISK PERIOD: 01 - 04 MAY

PREDICTED ACTIVITY INDICES: 12, 30, 17, 12 (01 MAY - 04 MAY)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE ON 02 MAY

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR & AFTER LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: LOW TO MODERATE

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR - GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN WASHINGTON STATE TO NORTHERN IDAHO TO CENTRAL MONTANA TO
SOUTH DAKOTA TO SOUTHERN MINNESOTA TO SOUTHERN WISCONSIN TO SOUTHERN
MICHIGAN AND POSSIBLY PARTS OF NORTHERN ILLINOIS AND NORTHERN OHIO,
TO DARK-SKY SITES OF NEW YORK STATE TO POSSIBLY DARK SKY LOCATIONS OF
NEW HAMPSHIRE AND MASSACHUSETTS.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

UNITED KINGDOM TO NORTHERN EUROPE INCLUDING ALL OF NORWAY, MOST OF
SWEDEN AND MOST OF FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN
REGIONS OF AUSTRALIA (PARTICULARLY EASTERN AUSTRALIA) AND NEW ZEALAND
MAY ALSO SPOT PERIODS OF ACTIVITY.

* Contact: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu for more
information regarding the Auroral Activity Prediction and
Simulation Software.

SYNOPSIS...

This Watch is being extended until 19:00 UTC on 04 May in response to
the last major class M6/3B tenflare from solar active Region 8210. This
flare was associated with a large coronal mass ejection that appears to have
a trajectory more directly at the Earth than the last coronal mass ejection

(which impacted the Earth at 09:30 UTC on 30 April and was ineffective at intensifying auroral activity). The disturbance expected on 02 May is forecast to be stronger than the last one we observed. It has a larger potential for producing periods of auroral storming that may become sporadically visible from many dark-sky middle latitude sites. For this reason we are extending this Watch interval to cover the 02 to 03 May time-frame.

Currently, we expect the disturbance to arrive sometime near 12:30 UTC on 02 May, give or take several hours. It could arrive as early as about 22:30 UTC on 01 May (later today), or as late as about 01:00 UTC on 03 May.

This WATCH will remain active until 19:00 UTC on 04 May. It will then be updated or allowed to expire.

For realtime information regarding the status of the disturbance, and any other solar flares or terrestrial disturbances, consult: http://solar.uleth.ca/solar/www/swarm.html

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO: http://solar.uleth.ca/solar/www/auroras.html

** End of Watch **

No smiley needed! The R9000 atually has a separate front end to handle 0.03-30 MHz that is rather similar to their HF receivers and transceivers, and uses the main synth divided down to improve phase noise. You could say it's both in one box.

Cheers
David GM4ZNX

student's sake,
>that you are not>as close minded when you are in front of your class.

I wonder if you would have the guts to say the above to my face WITHOUT YOUR
PENILE subsitute (gun).

>
>By the way, I have been in Ham Radio since 1964 and had not, until I saw
you
>crying>about the ARRL pulling your VE certification, joined the ARRL.
Lately I joined
>and>enclosed a letter telling them that the reason I was joining is that if
they
>are on the ball>enough to weed out an ass hole like you that they can't be
all bad.

If you like the ARRL you will love the KKK. Not that they are the same but
both
do not care about justice. For example you do not take someone's license
because they are
a Democrat do you?

That seems>to be your
>mentality when it comes to guns, some one commits a crime with a gun and
you
>want>to punish everyone by taking their guns.

Few peole NEED a gun. Many guns kill by accident, far more than are saved by
"protection."

I would like to hear you cry, like
>you did about>losing your VE certification, if because some fool got drunk
and ran over and
>killed a>bunch of people the police came and took your vehicle.....think
about that, if
>your capable.

That is the same thing as the ARRL VE matter. Why should my car be taken if
I were not the driver?
Cars are necessary, guns are not. No one drives a car to work.

> > Hi, I'm looking for a NiCd discharger.

Why? There is a limited number of charge/discharge cycles in a NiCd cell and wasting any charge will also be a waste of a part of the battery's useful life. Dan, ignore the myth of cell "memory effect" and get yourself a top quality charger which will not overheat the battery and which will automatically detect and stop at full charge.

> (From my model airplane days) work out Ohm's law to get a resistor value
> that will use the required number of ma in 1 hour. Buy or scrounge such
> a resistor with a wattage value of twice what you need. Short it across
> the pack and count time for a little less than 1 hour. Charge pack
> fully. Repeat 3 or 4 times. Pack re-conditioned!

That will waste 3-4 cycles in the limited life of the battery. And if you oversleep with the resistors connected, or if any one cell has any less energy than you had calculated, you will overdischarge the battery with the very high liklihood of cell reversal, which is incurable and will result in the total destruction of the battery.

Dear Friends,

WAMRAC/WACRAL celebrating it's 40th Anniversary Year shall be on the air
during the following periods.

On Friday, 8th. and Saturday 9th. May:- UTC/GMT times -

0600 - 0700 14.333 MHz
0700 - 0745 3.747
0815 - 0930 7.045 - 7.050
0930 - 1100 14.333
1230 - 1330 21.350
1600 - 1800 28.333
1800 - 1900 21.350
Any later times as bands permit on the given frequencies.

Sunday, 10th May:- The usual Sunday a.m. U.K. WACRAL Net
0700 - 0800 3.747
with no planned transmissions afterwards for the
Special Event Station to be dismantled.

For the sake of children of the neighbouring school, the station will
be in use on Tuesday 5th & Wednesday 6th when the 3.747 frequency is
to be used between 0900 - 1100 and 1230 - 1430 although other bands may
be used briefly.

For earlier times or later times on these two days, the frequencies
assigned for Friday and Saturday can be used.

NOTE: All planned frequencies +/- QRM

73s & 501 to all

From Tad Cook, K7VVV
Seattle, WA May 1, 1998
To all radio amateurs

SB PROP ARL ARLP018
ARLP018 Propagation de K7VVV

Thanks to KH6BZF for writing last week's bulletin while I was in Maui. Those who keep careful track of the numbers at the end of these bulletins or who use them in the WA4TTK Solar Data Display program may have noticed that there was a one day gap in last week's numbers. Note that the complete stats for the past two weeks are at the end of this bulletin.

A trip to another region is always interesting when one can observe propagation. For this author, it was Bahia, Brazil in late 1995 and Maui, Hawaii at KH6X last week.

The station and location were ideal, with no local noise sources and big antennas high above the Pacific. Being from the Pacific Northwest, the first thing I noticed was that ten meters was often open to the southern part of the United States, but never to northern latitudes, at least with the sunspot activity as it was.

Solar flux has been declining over the past few weeks, and now it is back on the rise. The predicted flux values for this Friday, Saturday and Sunday are 104, 106 and 108. Beyond that, flux values are expected to peak near 130 around May 8 and 9, then decline below 110 around May 15 and below 100 by May 17. Geomagnetic conditions have been active due to solar flares and coronal holes. The worst days recently were April 24 to 26, and we should see poor conditions again this Saturday, due to a flare on April 29 at 1637z. Active conditions should return around May 21 to 23 with an active coronal hole.

For the next few weeks, look for best worldwide propagation on 20 meters, with openings following local sunrise and continuing through the day. After dark, 20 should be excellent into the tropical regions well into the night. Because of shorter dark hours, 40

should offer fewer openings. When solar flux is up, look for openings on 10 and 15 meters, particularly when WWV reports K indices of 2 or lower.

Sunspot Numbers for April 16 through 22 were 59, 70, 28, 35, 35, 47 and 41 with a mean of 45. 10.7 cm flux was 106.4, 101.3, 98.5, 96.2, 97.7, 92 and 87.6, with a mean of 97.1, and estimated planetary A indices were 7, 15, 6, 4, 10, 7, and 6, with a mean of 7.9.

Sunspot Numbers for April 23 through 29 were 38, 22, 50, 30, 19, 54 and 65 with a mean of 39.7. 10.7 cm flux was 90.2, 90.6, 91.9, 90.7, 91.4, 98.4 and 100.5, with a mean of 93.4, and estimated planetary A indices were 14, 35, 22, 31, 14, 10, and 6, with a mean of 18.9.

[1080]

Newsline report number 1080 for release on Friday, April 24, 1998 to follow.

<*>

The following is a QST

This may be the last ever Newsline Report you hear. Find out why on Newsline report number 1080 coming your way right now...

<*>

This may be the last Newsline Report

Newsline is in major financial difficulty and this could be the last time you ever hear it. Andy Jarema, N6TCQ, is Newslines' Support Fund Administrator. He says that there is no money left at all to keep the service going and the plug could be pulled this week:

"I have instructed Newslines' editor to take us off the air in one week unless something drastic in contribution receipts occurs. Month after month, Newsline receives average receipts of under 30% of what it costs to gather the news and produce a report. It does not take an accountant to realize what this means.

Many of you have written to tell us what the Newsline service means to you, but this seems to be a small corps of supporters. But there are thousands of Amateur Radio clubs here in the United States and around the world that retransmit the weekly Newsline newscast. Their members are receiving a service.

Why their members do not feel it an obligation to help to support this type of service?

We only hear from an average of 100 or less clubs a year. We don't want to be the P.B.S. (Public Broadcasting System) of Amateur Radio, always going to a 'pledge break'.

If you want to keep this service, we need to hear from you NOW! If the service is silent next week, a lot of your nets will not be getting the late breaking news about Amateur Radio that you have grown accustomed to receiving on a weekly basis.

You will be without this information. It is all up to you. One week!

Please, after so many, many years of Newsline service, don't let it end like this." Andy Jarema, N6TCQ

If you want Newsline to be here next week, and for the weeks that follow, then only you can save it. The Address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

If you missed the address it will be repeated at the end of this weeks newscast.

<*>

Nashville Tornado Ham Help

Ham radio operators in and around Nashville, Tennessee are still involved in the aftermath of tornadoes that swept through the area a week ago.

Amateur Radio springs into action as two tornadoes ripped through the Nashville, Tennessee area last Thursday afternoon the 23rd. Approximately 100 people were injured by flying glass and blowing

debris. While one man who was hit by a falling tree in Centennial Park was listed in serious condition following the destruction of the tornados.

Amateurs were first called out at 7:00 AM by the National Weather Service to man the local Amateur Skywarn Net. Robert Harris, N4PQV was net control and said things got hairy even before the actual tornados hit.

"Earlier in the morning one of the storm cells we tracked through the Brentwood area. There were, there was one gentleman I do believe it was WD4ICI is a school teacher in Brentwood. And he checked in with net control who was me at the time. He checked in with net control to check on the status of a storm and with the National Weather Service help we had an operator at the National Weather Service that was looking at the local radar. With their help we had the students at that particular school go into their storm watch areas. At that particular time they put them in the hall ways and set them on the floor.

Then a little bit latter on another school just east of that location that we also did the same thing to. And there was a different ham that was local right there at the school had them in the same position because of the storm cells that moved through.

There were three different storm cells move through that particular area that morning. All three of which looked, from the National Weather Service, they looked to be tornadic." Robert Harris, N4PQV

Not only did amateurs man the Skywarn Net for 13 hours, they provided communications for the Office of Emergency Management, the Red Cross, and Damage Assessment teams after the tornados knocked out virtually all cellular and land based telephone systems.

Weather service officials say that more storms could threaten the area before the tornado season comes to an end. The hams say that they are ready if this should occur.

<*>

Virginia Governor signs statewide Ham Antenna Bill

Hams in Virginia win an important victory as Governor Jim Gilmore signs into law that state's new Amateur Radio antenna bill that limits local regulation of Amateur Radio antennas. The measure requires local ordinances involving the placement, screening, or height of antennas to impose the minimum regulation necessary to accomplish the locality's legitimate purpose.

But it does not end there. The new law also sets a height of 200 feet as the regulatory minimum in localities having a population density of fewer than 120 persons per square mile. It also provides for a 75 feet regulatory minimum height in more densely populated communities. And best of all, localities may not regulate the number of support structures in either case. In other words, a ham can put up as many antennas as he or she wants.

Bob Ham, KK4IY, of Vinton, Virginia was the prime mover behind the bill. He worked with state Senator John Edwards of Roanoke to get it into the legislature and get it enacted into law. It goes into effect on July 1st.

(Via ARRL, others)

<*>

Southern California APRS

One of the few holdouts in the "APRS QSY" movement may be changing its mind. At a recent meeting of Southern California's 2 Meter Area Spectrum Management Association the question was posed as to if there were any objections to the concept of the frequency change. At that time no overt objections were heard and the chairman stated the committee would move forward with the matter. It was also noted that since this was a designation of a simplex frequency, that the Technical Committee could make the necessary decisions in the matter and they would be final.

Amateur Television interests that use 2 meter simplex for an audio intercom were well represented at the meeting as were users of APRS. The only ones who were a no-show were the old time AM'ers who steadfastly refuse to recognize the existence of any mode other than theirs. Either way, it now appears as if the APRS QSY proposal is on track for a possible acceptance in Southern California. As we go to air, no target date for the frequency

shift to take place has been announced.

(Via public notice)

<*>

Ham Radio bumped from Circus Train

After thirty years of dedicated service, ham radio has been kicked off the annual run of Wisconsin's Great Circus Train to make way for commercial communications. Circus World Museum which sponsors the annual rail event cites severe space limitations for its decision to drop ham radio in favor of an offer of free digital and analog communications services.

The Great Circus Train runs each summer between Baraboo and Milwaukee. Baraboo is where the Ringling Brothers Circus got its start in 1884. Milwaukee is the site of Wisconsin's annual Great Circus Parade.

Ham radio first came aboard the circus train in 1965. This, when an ARES member named Don Evenson, K9JYX, got permission to install a VHF station in one of the cars. That station relayed messages to an High Frequency mobile station that was chasing the train. As the years progressed, improvements in VHF technology simplified communications. In 1994 onboard HF gear was added to complete the ham station on the rails.

But now that's all gone. The museum says that it evicted the hams because it is attempting to eliminate as much clutter as it can from the train cars. This, to open up more space for the passengers. As a result, all communications will be provided by a commercial communication supplier named Primeco instead of the Wisconsin amateur radio community.

(Via various sources)

<*>

FCC comes down on unlicensed ops

The FCC has gone on the war path against unlicensed stations. On April 2nd, the Commission issued Orders to Show Cause and Notices of Opportunity for Hearing against five people the agency says are operating unlicensed FM transmitters and are refusing to follow government orders to shut them

off.

Hit with the notices are unlicensed operators in Lender Texas, San Marcos, Texas, Cleveland, Ohio, Oroville, Washington and Chewelah, Washington. All are charged with continuing unlicensed FM broadcast operations. This, despite warnings from the Commission that the unlicensed radio transmissions were in violation of Section 301 of the Communications Act of 1934.

Each operator has been notified that he faces a possible fine of $11,000 and each has been told that he can request a hearing before the FCC.

(Via FCC release)

<*>

Mann removed from MIREX

Miles Mann, WF1F, the Director of Educational Resources for the Mir Amateur Radio Experiment or MIREX appears to have been relieved of all official duties with the group.

In a public notice posed to the Amsat North America bulletin board, MIREX President, Dave Larsen, N6CO, says that as of Tuesday, April 21, 1998, Mann is no longer a member of nor a spokesperson for MIREX. Larsen says that any actions or comments made by Mann as of April 21st, are to be considered to be of his own volition and not those of "MIREX".

No reason was given by Larsen for Mann's removal from his post but Larsen did say that he regrets Mann will no longer be a part of the MIREX team.

<*>

Three East NY DECs quit

Three Eastern New York Section Amateur Radio Emergency Service officials have quit their appointments as District Emergency Coordinators. The three resigned from the program "en masse" in an e-mail message sent to ARRL Field Services Manager Rick Palm, K1CE.

Those leaving the program are District Emergency Coordinator for Administration and Operations April Stack, K2ZCZ, Northern District Emergency

Coordinator Tom Woznack, N2SQO, and Central District Emergency Coordinator Ken Goetz, N2SQW. Goetz also serves as the New York State RACES Radio Officer.

No reason was given for their decision resign.

<*>

Alinco VHF+UHF "Credit Card" HT

Just in time for Hamvention '98, Alinco has announced the introduction of its new credit card sized dual band Handy-Talkie.

The DJ-C5T covers 144 to 148 MHZ on 2 meters and 420 to 450 MHZ on the 70 centimeter band. While only slightly larger and thicker than a credit card the HT does have an internal speaker and lithium ion battery. The tiny radio has 50 memories, CTCSS encode and decode, a removable rubber coated antenna and includes AM aircraft band receive.

Alinco says that the DJ-C5T has already won FCC type approval and is expected to be available at its dealers in mid-May. While no pricing has been announced, the company says that the anticipated "street price" of the radio will place it among the most affordable dual band HT transceivers.

(Via Alinco release)

<*>

Kit building at Hamvention '98

And kit building is making a big comeback in ham radio. In fact, its fast becoming the newest old fad to hit the service in years.

So as to accommodate the growing number of requests for more information in this almost lost art, Joe Eisenberg, WA0WRI of Lincoln, Nebraska is teaming up with some of todays hottest kit makers to host a first-ever Kit Builders forum at the 1998 Dayton Hamvention. Eisenberg tells Newsline that just like the song, everything old is new again:

"What we are going to do is to try to show people the fun of building kits. We will even try to have a soldering iron for someone to try his hand at building with. We are going to show all the fun it

is to put together kits and then make QSO's using gear you have built yourself." Joe Eisenberg, WA0WRI

Eisenberg says that he will be joined by a number of todays popular kit manufacturers:

"We will have representatives from Ramsay Electronics, Ten-Tec, Elenco, the G-QRP Club and Electronic Rainbow." Joe Eienberg WA0WRI

WA0WRI's Kit Builders Forum takes place on Friday afternoon, May 15th at the Hara Arena in Dayton. For more information on this and other exciting Hamvention events, visit their website at:

www.hamvention.org

(Via Newsline, WA0WRI)

<*>

Windtracks '98

It's spring and its time for hams to start launching and chasing more radio equipped balloon flights.

It was a perfect day for flying the blue skies of Indiana. Frosty temperatures greeted two dozen Green Field High School students as they prepared to launch Windtracks 16. A high altitude balloon experiment. The nine pound payload containing 3 amateur radio transmitters and equipment soared into the skies over central Indiana and began its 68 mile trek south east toward Kentucky. The balloon burst at 65,000 feet, but not before sending back sharp color pictures from its two onboard cameras.

Students at the high school and at a second elementary school in South Port, Indiana monitored the balloons progress via the onboard gps packet system.

Eight chase teams converged on a small farm near Milan, Indiana to recover the parachute and transmitter packages from the top of a 70 foot tree. It took nearly two hours to cut all of the packages free. Students at both schools ran all the radios used to communicate with the chase teams.

The next launch is set for 12:00 UTC on Saturday, April 25th from the Challenger Center in Brownsburg,

Indiana.

Hams can view live and archived pictures of
Windtracks flights via the web at:

www.windtracks.org

(Via Amateur News Weekly)

<*>

Noisy planet

The blue planet Earth may be too noisy for radio telescopes. This, as radio astronomers say that signals from communications satellites, cellular phones and pagers are hampering efforts to search the skies.

One case in point involves the ten radio telescopes that stretch from Hawaii to the Virgin Islands. One astronomer at the University of Iowa, says that all this modern telecommunications equipment is operating in the upper UHF and microwave region are emitting radio waves are disturbing radio astronomy.

Some astronomers say the only solution is to limit the amount of RF that is emitted into the bands that they use to search the skies. Others go so far as saying that its time to start plans to build a radio telescope on the far side of the moon. This, they say will shied it from noise generated on the Earth and from satellite in Earth orbit.

International - Help catch a U.K. Thief

In international news, word that police in the United Kingdom are asking hams around the world for help in solving a robbery that took place at about 22:00 UTC on Friday, March 27th in the town of High Leigh near Cheshire. Witnesses say that those involved in the crime were using two-way radio gear to communicate with someone that they believe to be an accomplice.

The police say that have no idea of what frequency band the criminals may have been talking on or where the third person was located. They are asking anyone who may have heard a suspicious conversation to call Detective Sargent Lowe or

Detective Constable Ryder at the Winslow police barracks. The phone number is international dialing plus:

01-224-613-643.

(Via GB2RS)

<*>

International - Hard politics in VK-LAND

Meanwhile, from down under comes news that Peter Naish, VK2BPN, is the new president of the Wireless Institute of Australia. Naish defeated incumbent Neil Penfold, VK6NE, at what can only be termed as a tumultuous annual meeting of the society that took place on March 28th and 29th in Melbourne.

According to Australia's Q-News, The meeting got off to a tenuous start when a major portion of the business agenda was declared out of order. This, because it was publicized improperly before the meeting took place.

When parts of the agenda finally were taken up, a politically volatile proposal was introduced. Some divisions want voting rights for divisions at Federal Meetings to be based on the number of members in a division, It was voted down for the second time in two years.

The overall meeting agenda could not be completed within the two days scheduled to complete it. As a result and the group will reconvene at a later date.

(Via Q-News)

<*>

DX

In DX, Scottlands' Otley Amateur Radio Club will mount a DXpedition to Bute Island for this year's IOTA Contest. The event takes place July 25 and 26th. Their entry will be Multi/Single. A special callsign has been applied for.

(Via QRZ-DX)

And this years Islands On The Air Convention will be held May 1st to the 3rd, at Las Palmas in the Canary Islands. This is an unique opportunity to attend one of the most important conventions in

Europe. For more information go to the shows website at:

www.ure.es

(Via IOTA)

And the ARRL Membership Services Department has announced the appointment of Bill Moore, NC1L, as the Century Clubs Branch Manager. His new duties became effective as of April 20th.

(Via ARRL)

Lastly, another record has been set on the new UK 136 Kilohertz band by Peter Dodd, G3LDO. It happened on March 21st when Peter made contact with OH1TN in Finland. This is amazing when you consider that G3LDO was only running 150 watts into a 45 meter long wire while OH1TN used similar power into a 28 meter high vertical.

(GB2RS)

*****

Blinking CW

And finally, word that not knowing the code can be expensive an expensive proposition. At least it was for one branch of the U.S. Military.

In the conflict between the pro and no-code segments of our hobby, one side usually brings up the argument that the military has abandoned the use of cw. In a recent set of sea trials by two vessels of the U.S. Navy, a combination of tests resulted in a total breakdown in conventional communications. Messages concerning maneuvers, course and speed had to be relayed in morse code by blinker lights. This once common naval communications mode is evidently a lost art. Because the inability to quickly transmit and receive the messages involved resulted in an aircraft carrier backing into a cruiser at considerable speed. Damage to both ships totaled over $10,000,000.

It's not known if the problem with the Navy's blinking light CW was on the transmitting or the receiving end.

The QSO I'm reading on here with Bert Fisher K1OIM turned into an ugly mud throwing war. Now Bert has his bag of tricks thAT he uses, he makes his comments and witty repartee but he also will bait people so that they will start a fight. This is unheard of in the ARS I knew.I quote the man who started the LA riots, motorist Jesse Jackson "c c c c can't w w w w we a a all j j j ust get a l l long gg ?".

Some of you boys are acting like ANIMALS. Bert starts it and you all bite. Now people say he's Jewish and no w they don't and I am and am proud to be. But if a man (Bert) won't have the courage to stand up and tell the world where his ethnic background is he is the real WIMP. The fella using K1OIM@MINDLESS.COM your a riot. Bootleggin a call on the air here, real choice and very originaal. And whoever bootlegged AA1ID in a post same there, who names a child Tamarack. Sounds like a name from the inner city of Harlem. Now boys in the spirit of the Judeo Christian tradition, let us all live by this motto, if you don't have something nice to say don't say it. Shalom

From: K0HB@usa.net
Message-ID: <6id89m$7pk$1@nnrp1.dejanews.com>
Source record: 173188

Hi David,

You ask some good questions.

First, I think it is fair to say that any of the current crop of HF transceivers will outperform your old 301/401 combo in just about every area that matters.

In my mind there are four grades of HF rigs available (not to start any fight.... others may classify them differently.)

First there are "casual" radios..... These are rigs like the TS50, IC706, Scout, etc. Prices top out at around $1,200. These are all very servicable rigs and the typical "casual" operator will be very satisfied with them. Usually run about 100W, have a good sensitive receiver, and a few "bells and whistles". These are designed to a "price point" and their shortcomings will usually be in few filter options, "vulnerable" receivers, and limited operational flexibility. A strength of these radios is small size.... many of them make *great* mobile rigs. Comparable 1960's rigs would be the Heath HW series, SBE-34's, etc.

The next group I will call "mid range" radios. These are full featured rigs, acceptable to all but the really demanding operators. Prices range up to about $2,000. These radios do it all, and often radios in this class are used to introduce "new" features which are "proven in" and later appear in "high end" rigs. Rigs in this range often are heavily populated with "bells and whistles". Examples of this class are the IC746, FT900, TS570, etc. 1960's equivalents would be Heath SB series, Swan, Hallicrafters, etc.

My third group is what I call "serious rigs". These typically are priced in the range up to around $2,500, and are aimed at operators who are more demanding in "performance" matters..... tight front ends, low noise floors, etc. Examples are the IC756, TS870S, or FT1000MP. 1960's equivalents would be Drake Twins.

Fourth come the "competition class" rigs aimed at affluent DXers, top-ten contesters, etc. These radios sell for up to around $3,500, and are worth every nickel (if you can afford them). Transmit signals (because of power-mosfet finals) are crystal clean, receivers are bullet proof, filtering options abound, noise floors are at ESP level. "Awesome Receivers" is the watchword of this class -- with headphones on, you feel like you have literally "inserted your head into the band". Examples are the FT-1000D, IC775DSP, and TS0950SDX. These are the "S-Lines" of the 90's.

Actually, there is a fifth class -- the "Ego Radio". The only example I know is the IC-781. Cost is up around $6,000+, and it sure looks impressive, but I don't know that it performs much better than group three category.

Once you move up out of the "casual" radios into the mid-range group, you will find that any modern radio will outperform your 301/401 on most counts. Stability will be better, operating "flexibility" will be greater, and receivers will be more sensitive and more immune to "hostile RF" environments such as a KW down the street.

Enough from me..... I'm sure you'll hear more about other things, such as the new Kachina "radio in a computer"..... exciting times!

73, Hans, K0HB

Talk to your MARS area or region director. All three MARS programs
have
a technical staff who get the mods from the manufacturers and are
allowed
to distribute them to authorized MARS members.

First thing I would do is have the Heathkit line shipped from New Jersey out to your present QTH in Berkeley or go back to New Jersey and get it. You may find it meets your needs completely. In any case, you would have it to compare any other rig to. Beyond that, I really can't say what improvements you might get by moving to a new solid state rig. In Berkeley you are probably near several dealers, so that's probably the best place to start.

73 de KD7MK

In a previous article, daj@ccrma.Stanford.EDU (David Jaffe) says:

>This is one of those painfully-open-ended questions. Please excuse
>me for asking it. But I thought I'd give it a try anyway...
>
>Perhaps there's an FAQ or (even better) some hard-boiled hard-won advice.
>
>The basic question is (are) "how the heck can I figure out which HF
>rig to buy??" and "I'd like to upgrade from my vintage HF rig... what
>improvements should I expect to see?"
>
>I was active in the mid 60's as a teenager in New Jersey. I had (and

I bought a used Heathkit SB301/401 in 1983. It had problems:

knob backlash ==> knob tightened
poor sensitivity ==> FET amplifier added after crystal filter poor
receiving on 80m and 40m at night ==> attenuator added no RIT ==> ??
ineffective SSB signal because of no speech processing ==> ?? no second
VFO ==> ??

After modifications, I started hearing DX on 80m but my signal was always
weak on SSB despite controls showing full power.

I deliberated how to fix problems marked as ??. This took so much time off
my work that I bought an IC-735, where I could not correct anything.

/\

POTENTIAL MAJOR SOLAR FLARE WARNING

UPDATED: 20:40 UTC, 01 MAY

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGION 8210 (S16W10@01/2030Z)

ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS						
DAYS	C5.0	M1.0	M5.0	X1.0	X5.0	>X12.0
1(+)PG	100 %	70 %	50 %	30 %	10 %	5 %
3( )PG	100 %	80 %	70 %	40 %	15 %	5 %
5( )PG	100 %	85 %	75 %	50 %	15 %	5 %
7(-)PG	100 %	85 %	75 %	50 %	15 %	5 %

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated levels of activity based on current projections of region development. Actual conditions may, of course, differ from these projections.

SYNOPSIS:

Region 8210 is redeveloping opposite polarity flux along the southeast to the northern sides of the main leader spot. A delta has formed on the eastern side. Magnetic gradients have again intensified all along the northern to southeastern sides of the main spot and there is now evidence of strong magnetic shear along much of the northern to southeastern neutral line, but most particularly along the eastern to southeastern area of the region. Region 8210 has already produced several small x-ray flares within the sheared delta zone. More significant solar flaring, in the major M to

small X-class range may be observed if development continues.

To observe these significant solar events in realtime on your own computer, interested persons would do well to investigate the software at:

http://solar.uleth.ca/solar/www/swarm.html

To be e-mailed additional warnings or alerts, fill out and submit the form located at: http://solar.uleth.ca/solar/www/sublists.html

Kenwood TS-940SAT with antenna tuner for sale. Just realigned
and tuned up in late 97 by Kenwood warranty station. Works great,
fine radio. $1150 plus UPS shipping in original box with manual.

Would consider trade for Pentium computer, laptop computer,
or maybe Icom 706 plus cash. Let me know what you have.

SAREX SCRAMBLING TO FILL THOMAS' DANCE CARD

With only weeks to go before US astronaut Andy Thomas must return to Earth from the Russian Mir space station, efforts are under way to schedule as many Mir-school contacts as possible. Thomas, who's KD5CHF, is scheduled to end his tour aboard the aging Russian space outpost in early June.

On tap for May so far are Mir Amateur Radio contacts with schools in New Hampshire, South Africa, Texas, Tennessee, and, possibly, Connecticut. The South African contact will occur during the Africa Telecom 98 conference, to demonstrate how Amateur Radio on Mir--and eventually aboard the International Space Station--can benefit education. Attempts also are being made to firm up contact schedules with school groups in Australia. The Australian government has issued Thomas, a native of Adelaide, the special

call sign VK5MIR.

Thomas has been especially active in recent months catching up on the backlog of school contacts, which were halted after serious technical problems cropped up aboard Mir in 1997. He has also managed a few casual contacts. Nearly all of the activity has been on 70 cm.

The Mir crew has been preoccupied the past few weeks with repair work that included a series of space walks that precluded Amateur Radio activities. Last week, Mir's cosmonauts and ground controllers fired up the station's new thruster engine. The engine keeps Mir's solar panels properly oriented toward the sun. Cosmonauts Talgat Musabayev, RO3FT, and Nikolai Budarin, RV3FB, completed three space walks during April to replace the thruster.

HAMS HELP IN SECOND TENNESSEE TORNADO

While an April 16 tornado in downtown Nashville, Tennessee, got most of the media attention that day, a second potent storm struck some 70 miles to the south in Lawrence County. Hams mustered to help in storm spotting, rescue and recovery, and damage assessment.

Ron Mott, W4RDM, of Lawrenceburg says SKYWARN spotters saw the tornado as it approached and tracked its path across the county. Mott owns and maintains the 2-meter repeaters used for weather spotting.

Bill Phillips, WD4KQV, says the SKYWARN Net was activated on 2 meters the afternoon of April 16 and ham weather spotters were "among the first to report the tornado entering the county from the west." Phillips says the SKYWARN Net operates in cooperation with the local Emergency Management Agency, and net control operations reside at the Lawrence County Emergency Operations Center. SKYWARN reports were relayed to the National Weather Service office in Nashville and to media outlets in Lawrenceburg and in Huntsville, Alabama.

Mott says that, at one point, a tornado picked up a one-ton truck and dropped it some 15 miles away.

Phillips says the SKYWARN activity helped speed up the official response to the emergency. "Because the group is well known in the community, local fire departments and other county agencies monitor the SKYWARN repeater and were able to start emergency service personnel into the stricken areas almost immediately," he reports. SKYWARN members began damage assessment once the tornado had cleared the county. During this phase, hams discovered at least two injured people and summoned help via ham radio.

The next day, hams helped to complete the damage assessment, which eventually led to Lawrence County's being designated a federal disaster area. Based on damage reports, the storm was officially upgraded from an F4 to an F5.

In ceremonies April 21, SKYWARN members were officially recognized for helping to save lives in northern Lawrence County by providing early warning of the approaching storm. County officials commended the group's efforts and

presented citations to those who had helped in the storm-spotting activities.

Pictures of the storm are on the Lawrence County SKYWARN page at http://www.usit.com/mottrd/swarn.htm

US TEAM TO TAKE ON WORLD-CLASS FOXHUNTERS

For the first time ever, a team of US hidden transmitter hunters--or "fox hunters"--plans to compete at the ninth ARDF World Championships. The US team will represent the ARRL at the event, to be held September 1-6 in Nyiregyhaza, Hungary (250 km east of Budapest). More than two dozen countries are expected to send their best on-foot foxhunters to this world competition, being organized by the Varosi Radio Club in Nyiregyhaza. The eighth ARDF World Championships were held last September in Sankt Englmar, Germany.

The ARDF World Championships follow established IARU foxhunting rules, using standard orienteering maps, punches, cards, and control flags. During separate events on 2 meters and 80 meters, five low-power "fox" transmitters are concealed in a large woods. The VHF and HF events are held on separate days. Each competitor, working independently, uses direction-finding techniques to find as many foxes as possible within two hours. Competitors and awards are separated into divisions on the basis of age and sex.

The ARRL's ARDF Coordinator Joe Moell, K0OV, says there's still room on Team USA for more foxhunters. Each competitor must be responsible for his or her own transportation, food, lodging and incidentals. For more information on how you can participate, contact Moell at Box 2508, Fullerton, CA 92633; e-mail homingin@aol.com. "Time is of essence, because diplomatic and travel arrangements must be made well in advance," Moell says. Canadian amateurs should contact RAC National ARDF Coordinator Perry Creighton, VE7WWP, 4011 Hollyridge Place, Victoria, BC V8N 5Z8.

For more information on ARDF, visit the K0OV Web site, http://members.aol.com/homingin/.

RED CROSS HONORS NEW YORK ARES/RACES

The American Red Cross chapter of Northeastern New York has formally recognized Amateur Radio's role during the January 1998 ice storm by presenting New York State RACES with its 1998 Good Neighbor Award. The award also acknowledged the hobby's continued support for the disaster relief agency.

At an April 28 ceremony in Albany, New York, former SEC Anthony Pazzola, WB2BEJ, and former DEC April Stack, K2ZCZ, accepted the award on behalf of all New York State ARES/RACES members who supported the ice storm operations. The Good Neighbor Award goes each year to an individual or organization outside of the American Red Cross that makes a significant humanitarian contribution to the local, national, or international community.

Pazzola and Stack, both communications officers for the chapter and members of the Northeastern New York Disaster Services Committee, received individual award certificates.

Pazzola and Stack will convey the award to New York State RACES Officer Ken Goetz, N2SQW, of Greene County at a ceremony this month. In addition to seeing North Country duty from the New York State Emergency Management Office, Goetz also advised amateur coordinators during the ice storm operation. The award will be on display in the New York State Emergency Management Office radio room--known to New York amateurs as "The Bunker."--April Stack, K2ZCZ

ARRL FOUNDATION 1998 SCHOLARSHIP WINNERS NAMED

The ARRL Foundation Scholarship Committee has announced recipients of its 1998 academic scholarship awards. Congratulations to these scholarship winners:

James T. McDonald, Jr, KC7EFP, Phoenix, Arizona: The ARRL Scholarship to Honor Barry Goldwater, K7UGA ($5000)

Greg L. Magone, KB7QPS, Whitefish, Montana: The Mary Lou Brown Scholarship ($2500)

Jeffrey L. Mah, N9JYL, Buffalo Grove, Illinois: The Earl I. Anderson Scholarship ($1250)

Nancy A. Dekat, KB0SDS, Belvue, Kansas: The Paul and Helen L. Grauer Scholarship ($1000)

David S. Curry, KG2EB, Victor, New York: The Perry F. Hadlock Memorial Scholarship ($1000)

James S. Sikorsky, Jr, N3PHB, Wapwallopen, Pennsylvania: The You've Got A Friend In Pennsylvania Scholarship ($1000)

Jack E. Cohoon, KE4YWM, Augusta, Georgia: The L. Phil and Alice J. Wicker Scholarship ($1000)

Patrick D.T. Kelly, N7UKI, Phoenix, Arizona: The Charles N. Fisher Memorial Scholarship ($1000)

Scott A. Zastoupil, KB0KFX, Williston, North Dakota: The K2TEO Martin J. Green Sr. Memorial Scholarship ($1000)

The General Fund Scholarships ($1000 each) to: James P. Born, KB8HIP, Kenton, Ohio; Emily A. Dunker, AA0PG, Vernal, Utah; Jose E. Gonzalez, KE6WDQ, N Miami Beach, Florida; Paul J. Rudnicki,KB7MFJ, Layton, Utah; Jeffrey P. Morris, N3WEL,Hockessin, Delaware; James J. Behnke, K2VER, Highland Lakes, New Jersey; and Gregory R. Doppke, N8TYP, Casco, Michigan

Zachary S. Clobes, W0ZL, Hutchinson, Kansas: The Irving W. Cook, WA0CGS, Scholarship ($1000)

Richard S. Garrett, AA0CR, Florissant, Missouri: The PHD ARA Scholarship ($1000)

David A. Arthur, W2DAA , Charlton, New York: The F. Charles Ruling, N6FR, Memorial Scholarship ($1000)

James W. Gregory, AD4GN, Atlanta, Georgia: The Charles Clarke Cordle Memorial Scholarship ($1000)

Melissa D. Marshall, N5KK, Tulsa, Oklahoma: The Tom and Judith Comstock Scholarship ($1000)

Roy M. Crownover, AB5EB, New Braunfels, Texas: The North Texas Section-Bob Nelson, KB5BNU, Memorial Scholarship ($750)

The New England FEMARA Scholarships ($600 each) to: Rohan M. Amin, N1PCT, Bethel, Connecticut; Swaminathan Kumaresan, KD1QV, Wakefield, Rhode Island; Jason M. LaPenta, N1XFG, Maynard, Massachusetts; Jennifer M. Watt, N1TGF, Stratford, Connecticut; Guinnevere Hand-Boniakowski, KA1ZWK, Wells, Vermont; Scott A. Garman, KD1GR, Nashua, New Hampshire; Dawn D. Hopkins, KE6AHG, Sunnyvale, California; Thomas H. Lochner, N1QOF, New Canaan, Connecticut

Christopher P. Brophy, KB9HID, Grafton, Wisconsin: The Edmond A. Metzger Scholarship ($500)

Joseph G. McCullough, N9XAE, Chillicothe, Illinois: The NEMAL Electronics Scholarship ($500)

David C. Sansone, KB2WEV, Webster, New York: The Dr. James L. Lawson Memorial Scholarship ($500)

Timothy T. Tye, KJ5IO, Krum, Texas: The Fred R. McDaniel Memorial Scholarship ($500)

Brett M. Bonomo, KB9KTK, Morris, Illinois: The Six Meter Club of Chicago Scholarship ($500)

David A. Schick, W9OFA, Noblesville, Indiana: The Chicago FM Club Scholarship ($500)

Adam G. King, N9JRC, Eau Claire, Wisconsin: The Michael J. Flosi Memorial Scholarship ($500)

Michelle B. Musicer, KD4UCF, Alpharetta, Georgia: The Eugene ""Gene" Sallee, W4YFR, Memorial Scholarship ($500)

Daniel A. Quist, KC5KGB, Elephant Butte, New Mexico: The Albuquerque ARC Scholarship ($500)

The Mississippi Scholarship was not awarded this year.

To apply for 1999 scholarships, send a business-size envelope with two units of first-class postage affixed to The ARRL Foundation Inc, 225 Main St, Newington, CT 06111. The deadline for applications and transcripts is February 1, 1999.

COLLINS PAPERS TO UNIVERSITY OF IOWA LIBRARIES

The papers of the late Arthur A. Collins (1909-1987), founder and president of Collins Radio Company, now part of Rockwell International Corporation,

have been deposited at the University of Iowa Libraries, Iowa City. An electronics pioneer, Collins founded the Collins Radio Company in Cedar Rapids, Iowa. The company began producing Amateur Radio equipment in 1933. Collins later expanded to other specialized areas of electronics including aviation, navigation, broadcast and general communications.

During World War II, Collins Radio supplied electronic equipment for the military. Later, Collins was the major communications supplier for the US Manned Space Program. When Admiral Richard E. Byrd planned his expedition to Antarctica in 1933, he selected Collins to build the transmitters he used to keep in touch from the South Pole.

The Collins collection fills 33 large boxes with documents covering the years 1932 through the late 1970s. Materials include correspondence, subject files, photographs, notebooks, corporate annual reports, product literature, product drawings and other working papers. The collection is currently being processed, which involves arranging, preserving and describing the materials so that they will be available to researchers. Processing could take up to a year. For more information on the collection and its contents, contact the University of Iowa Libraries, Department of Special Collections, tel 319-335-5921.--University of Iowa; thanks to ARRL PIO Chuck Gysi, N2DUP

AMATEUR SATELLITE DEMONSTRATION A HIT

Ham radio--and especially satellite operation--was the focus during the recent Space Fair '98 at the Riverside Applied Learning center in the Fort Worth, Texas, area. AMSAT-NA Vice President of Operations Keith Pugh, W5IU, called that the amateur radio satellite demonstration during the week of April 20 a huge success.

Riverside, an elementary school for special kids, this year has placed emphasis on learning about outer space. Among other activities, some 200 students and parents from the school attended a Mir visual sighting party and were treated to a "perfect 60-degree elevation Mir pass," Pugh said.

Satellite demonstrations took place on April 24, with W5IU, WB5QLD and KG5OA participating from Riverside. Satellites used for the on-air demonstrations included FO-20, FO-29, AO-27, AO-16, LO-19, UO-22, KO-23, KO-25 and Mir. Contacts were made on the analog (voice) satellites and messages were also received on the digital satellites from the US, Canada, the United Kingdom, and Austria. W5IU and crew also uploaded several digital messages.

In addition to satellite operation, HF contacts included one with QST Managing Editor Steve Ford, WB8IMY, at W1AW. Others notable contacts included one with W0WR, the Kansas Cosmosphere Station in Hutchinson, Kansas (with KI0MN as op), and another with former astronaut Ron Parise, WA4SIR, operating WA3NAN, the Goddard Space Flight Center Radio Club in Greenbelt, Maryland. Pugh said Parise displayed "patience and grace" answering many questions from the students about his experiences as an astronaut. The school also participated in the Mir school test on April 27.

"For those of us who worked at the school, the enthusiasm displayed by these young children was the best reward we could possibly receive," Pugh

said.--AMSAT News Service

UKRAINIAN DXER TO VISIT US IN MAY

Well-known European DXer and contester Vladimir Goncharsky, U5WF, of L'viv, Ukraine, will visit the US in May as the guest of radio clubs in Northern and Central New Jersey. U5WF will stay at the home of Barry Cohen, K2JV, in Berkeley Heights, New Jersey, and will attend the Dayton Hamvention with members of the New Providence Amateur Radio Club. He also plans to visit ARRL Headquarters in Connecticut while he's in the US.

Goncharsky is well-known to the DX community and stands high on the DXCC Honor Roll with more than 371 confirmed DX countries. He is normally active from his home station for all international contests on all modes.

His special, honorary call sign, U5WF, was originally issued by the Soviet Union to World War II veterans. (Goncharsky taught CW to the Red Army Signal Corps during the War, but he also got in trouble with the authorities several times over the years because of his radio activities.) Even after the breakup of the Soviet Union, licensing authorities in Ukraine allowed him to continue to use his one-of-a-kind call sign.

Goncharsky is a founding member of the Virginia-based Foundation for Amateur International Radio Service (FAIRS), along with his son Victor, US5WE, and daughter-in-law Helen, UR5WA. Father and son visited the US and ARRL HQ in 1992 as guest of FAIRS.--Barry G. Cohen, K2JV

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Thanks to KH6BZF for writing this bulletin while I was in Maui. Those who keep careful track of the numbers at the end of these bulletins or who use them in the WA4TTK Solar Data Display program may have noticed that there was a one day gap in last week's numbers. The complete stats for the past two weeks are at the end of this bulletin.

A trip to another region is always interesting when one can observe propagation. For this author, it was Bahia, Brazil in late 1995 and Maui, Hawaii, at KH6X last week.

The station and location were ideal, with no local noise sources and big antennas high above the Pacific. Being from the Pacific Northwest, the first thing I noticed was that ten meters was often open to the southern part of the United States, but never to northern latitudes, at least with the sunspot activity as it was.

Solar flux has been declining over the past few weeks, and now it is back on the rise. The predicted flux values for this Friday, Saturday and Sunday are 104, 106 and 108. Beyond that, flux values are expected to peak near 130 around May 8 and 9, then decline below 110 around May 15 and below 100 by May 17. Geomagnetic conditions have been active due to solar flares and coronal holes. The worst days recently were April 24-26, and we should see poor conditions again this Saturday, due to a flare on April 29 at 16:37

UTC. Active conditions should return next month around May 21-23 with an active coronal hole.

For the next few weeks, look for best worldwide propagation on 20 meters, with openings following local sunrise and continuing through the day. After dark, 20 should be excellent into the tropical regions well into the night. Because of shorter dark hours, 40 should offer fewer openings. When solar flux is up, look for openings on 10 and 15 meters, particularly when WWV reports K indices of 2 or lower.

Sunspot numbers for April 16 through 22 were 59, 70, 28, 35, 35, 47, and 41, with a mean of 45. The 10.7 cm flux was 106.4, 101.3, 98.5, 96.2, 97.7, 92, and 87.6, with a mean of 97.1. The estimated planetary A indices were 7, 15, 6, 4, 10, 7, and 6, with a mean of 7.9.

Sunspot numbers for April 23 through 29 were 38, 22, 50, 30, 19, 54, and 65, with a mean of 39.7. The 10.7-cm flux was 90.2, 90.6, 91.9, 90.7, 91.4, 98.4, and 100.5, with a mean of 93.4. The estimated planetary A indices were 14, 35, 22, 31, 14, 10, and 6, with a mean of 18.9.

WILLIAM V. "BUD" HARGREAVES, K4HMV, SK

The "Father of the PolyCom," William V. ("Bud") Hargreaves, K4HMV (ex W2SXB), of Pompano Beach, Florida, died January 3, 1998, after a long illness. He was 67. As chief engineer at Polytronics Laboratories in the early 1960s, Hargreaves designed the popular PolyCom 6&2, PolyCom 2, and PolyCom 6 AM transceivers and other products. When Polytronics closed in 1965, Hargreaves began a career at Electronic Communications Inc in White Plains, New York, where he designed CB and commercial transceivers under the Courier brand name. A former US Marine and lifelong amateur, he also was an accomplished organist. His wife, Shirley, K4HMU, a son, and a daughter survive.--Henry G. "Hank" Grilk, WA2CCN

IN BRIEF:

* This weekend on the radio: The Connecticut QSO Party, the Massachusetts QSO Party, the ARI International Contest, the Ten-Ten International Net Spring CW QSO Party, the Danish SSTV Contest, and the MARAC County Hunters CW Contest are on tap for this weekend. Just ahead: The ARRL VHF/UHF Spring Sprint for 902/1296/2304 MHz (see April QST, page 102 for details), the FISTS CW Club Spring Sprint, and the Indiana, Nevada, and Oregon QSO parties are the weekend of May 9-10. See May QST, page 96, for details.

* Vanity update: The FCC in Gettysburg has processed vanity call sign applications through April 6, including all work in process. The FCC issued 190 new call signs on April 28. Another 213 applications ended up in the WIPs stack.--FCC

* April QST Cover Plaque winner: Jim McMasters, KM5PO, won the April QST Cover Plaque Award for his article, "High-Speed CW and Meteor Scatter_An Exciting VHF DX Medium." Congratulations, Jim!

* FCC's Gary Stanford retires: Gary L. Stanford, W4FDP, the associate bureau chief in the FCC's Wireless Telecommunications Bureau, has retired, effective May 1. Stanford joined the Commission in 1961. An electrical engineer, he joined the Private Radio Bureau in 1983 and became acting chief of the Land Mobile and Microwave Division in 1986. Later that year, he was named to head the PRB's licensing division at Gettysburg and was elected into the Senior Executive Service in 1992. He retires as associate bureau chief for operations within the Wireless Telecommunications Bureau in Gettysburg. Best wishes, Gary!

* Virginia ARRL member license plates: Thanks in part to the efforts of ARRL Roanoke Division Director John Kanode, N4MM, and Vice Director Dennis Bodson, W4PWF, ARRL members in Virginia can request to have the ARRL diamond logo on their license plates, starting July 1. Applicants must be licensed amateurs and ARRL members and have transmitting and receiving equipment permanently installed in the vehicle. Including a call sign on the plate is optional. As with similar "logo" plates in Virginia, the ARRL logo plates cost $10 per year, and there is no additional fee to include your call sign. ARRL logo plates will read "ARRL" below the call sign or plate number, instead of "Amateur Radio," however.--Dennis Bodson, W4PWF

* Wisconsin sesquicentennial stations to air: Wisconsin celebrates its sesquicentennial--150 years of statehood--this month. Several special event stations sporting 1x1 call signs will be active beginning May 2 and continuing through early July. Many operations will be clustered around May 29--Statehood Day in the Badger State. Stations expected to be active and their announced days of operation include: W9S (Madison), May 2-10; W9I (Green Bay), May 22-30; W9B (Belmont), May 29-31; W9W (45/90 marker near Wausau), May 29-30; W9A (Adams County), June 20; W9W (Oshkosh), July 1-5. All stations plan HF and at least some VHF operation on several modes. Certificates will be available for a 9x12 SASE and/or $1. A $1 donation is requested for the W9S certificate or QSL.

* Dayton Contest Dinner set: The sixth annual Dayton Hamvention Contest Dinner, sponsored by CQ Contest magazine, will be held on Saturday, May 16, 1998 at 6:30 PM (cash bar opens at 5:30 PM) in the Van Cleve Ballroom of the Crowne Plaza Hotel, Fifth and Jefferson Streets, Dayton, Ohio (downtown, next to the Convention Center). Tickets are $28, and the deadline to order is May 6. Seating is limited. For tickets, contact Radio Bookstore, Box 209, Rindge, NH 03461; tel 800-457-7373; 603-899-6957; fax 603-899-6826; e-mail nx1g@top.monad.net. Telephone weekdays between 10 AM and 6 PM ET only. Credit card orders are welcome. Tickets will be sent via First Class US Mail no later than May 7. Please allow time for your tickets to arrive. Radio Bookstore is not liable for tickets lost in the mail. G3SXW will give a short dinner program, and the 1998 Contest Hall of Fame inductions will be announced. The North Coast Contesters are handling all dinner arrangements.--Tim Duffy, K3LR

* VK to US 28 MHz "pedestrian mobile": Here's proof that HF propagation is improving in the new sunspot cycle: Contacts between an Amateur Radio pedestrian mobile station in the Australian capital of Canberra and fixed stations in the US took place March 28 on 10 meters. Using a converted CB

transceiver and a nearly 6-foot mobile whip, Peter Parker, VK1PK, made two contacts with the US around midday Australian time. Parker's US QSOs followed a successful contact with ZL2RR earlier that morning. Parker used approximately 8 feet of wire for a ground radial and powered the transceiver from a 12 V battery. He was running around 12 W PEP.--WIA QNews

* Africa Telecom 98 special event: Special event call sign ZS98IARU will be on the air May 4-9 from the IARU Region 1 exhibit at Africa Telecom 98 in Johannesburg, South Africa. Amateur Radio is well represented at this important ITU event. The station will be on the air from 0800 to 1600 UTC each day, and additional hours may be arranged. A special QSL card will be issued. The QSL address is PO Box 1842, Hillcrest 3650, South Africa.--Hans van Groenendaal, ZS5AKV

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than

the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

misc seems appropriate because i am lost in what i am trying to to, and i don't know where to start.

my wife and i are involved in high power model rocketry. we often find ourselves separated by great distances, and need to communicate with each other when recovering rockets, etc. we also hike and do other things outdoors that would make having two-way radios a good thing to have. i have tried the family radio service radios and find their range to be limited. yes, i want more power. i was planning to get two motorola sport 10x radios.

i have filled out the two above forms as best i can. it took some time to dig up all the required information. i think i have everything right, but one last block remains unfilled. on form fcc159, they ask for lockbox #. i have no idea what this is, or where to find it. i have been looking at the www.fcc.gov site, but cannot find what i need to put here. if anyone can help me please send me an email at otto.burgess@lexis-nexis.com as soon as you can. in fact any advice you can give me on filling out these forms so that they are not rejected would be welcome. they say they will reject the application if it is not complete and correct.

thanks a bunch....

Here's what can happen if you deal with an a**hole on the newsgroups.

I was interested in a Yaesu FT-101ZD he was selling, but I was also checking
out a Kenwood TS-820S. I kept asking Andy Ross if the FT-101ZD had ever been
tampered with by any CBer's (CBer's like FT-101's and they will sometimes
monkey around with the RF circuits in their vain attempts to get more output
power from the radio). I kept asking, but he wouldn't answer me about this
issue. Maybe it was never used on CB.... but he wouldn't answer the
question. So I decided to go with the Kenwood.
Here are the E-mail exchanges:

Andy Ross (seller of FT-101ZD) wrote:
> > ok send the money order and correct billing address and i will ship it. Andy
> > Ross

Mark KB4AEP wrote:
> Sorry Andy, after comparing the features of the Kenwood 820S and the

>well i hope you get what you want . I am glad you took the other radio . CBers
>like you deserve what you get Sorry I wasted my time with trash like you.....

Watch out for this guy, he won't be straight forward and he gets mad easy.
As a buyer in a free market, I have a right to choose who I buy from.
The seller shouldn't get mad and act like a child, there are other buyers out there.

Mark........KB4AEP

>>

Not a bad idea ... considering that the ARRL represents only about 22
percent of the US Hams. The FCC may have thought it wise to hear from
the other 78 percent.

Where do we send our comments to the FCC ? What is the deadline for
comment?

Spread the word at ham club meetings.

It certainly can't be due to your unbiased reporting, such as:

>... APRS. The only
>ones who were a no-show were the old time AM'ers
>who steadfastly refuse to recognize the existence
>of any mode other than theirs.

Not a very neutral composition, eh?

I've been licensed for 22 years, and have only listened to two of
your broadcasts during that period. You might be thinking your news
service is more valuable than it actually is. Today it is easy
to pull up all the news (in real time) one could possibly digest
via the internet.

Maybe it's time to retire from your broadcast career and go back
to being just an amateur. Take Glen K1MAN with you.

Jeffrey KH2PZ

Has anyone got details of the mod for opening up the tx side of this radio?
Also can the gap between 30Mhz and 48Mhz be mod also?
Many thanks,
Ivan

Hello all

Due to a recent change of address I am selling my TS440sat
GWO with one small scratch on the lid,I have put a new front
panel on so it looks almost new.The atu is fitted and works
well and there is the 1.8 ssb narrow filter and the mobile
bracket with two power leads and comes with box and service
manual.If you collect I can also throw
in a home brew tilt over tower with winch.I am looking for
about 700 uk pounds but open to negotiation.

Please reply by email only nigel@mfp1.demon.co.uk

TOTAL Bullpucki. Back up your BS with statistics.

>
Burt. Get your head out of your ass. here in florida, anybody NOT
convicted of a felony, can carry a loaded firearm, in a
motor vehicle, secure in the glove compartment. the only condition
is the gun must be three moves away, from the occupants.
Since this law was passed, violent crimes, specially
those like carjacking, have dropped dramatically.

Unlike Massachusetts, where you have the strickest handgun
law, in the country, and it has not accomplished SQUAT.
Massachusetts, hail to the kennedys, anti handgun proponents.
I am ashamed to admit I was born in massachusetts, But i got
smart and moved, to retain my constatutional rights.

If your so brave, and massachusetts is so safe, why don't
you drive up to lowell, and walk around the cocain condo
section for a while. you may become a statistic.

Bob Proud NRA member.

Your interpretation skills are poor. I did nothing of the sort. Rather, I
merely stated the obvious: if you incite enough people for a long enough period
of time, eventually one will be pushed "over the edge" and will do something
about it. Human nature.

Well, as I said, there is nothing scientific about my "categories".
But (especially at current pricing) my impression is that the 756
is a *lot* more radio than the 746.

Reasonable people may well disagree with my categories, and they
were only meant as illustrations, and were more based on radio
capabilities, not prices.

Is it an ACCIDENT when a teenager put a gun to his own head and pulls
the trigger multiple times? Is it an ACCIDENT when a drugged out fool
plays with a gun and kills someone? Is it an ACCIDENT when a robber is
in someone's home and kills the husband and wife, but didn't mean to?

These are the gun ACCIDENTS that make up this so call death rate by gun
accidents. True gun ACCIDENTS are at an all time low despite the
stupidity being demonstrated by the liberals today.

Do you know "THE DIFFERANCE BETWEEN IGNORANCE AND STUPIDITY"?

IGNORANCE is cured with learning but STUPIDITY is life long.

I know that I am ignorant but I try to learn new things each day but
Burt you are just stupid.

1532. Re: STRAW POLL (RFD): rec.radio.amateur.* "Vote of Confidence"

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-02 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6ifiel$7a1$1@newscene.newscene.com>
Source record: 173080

I was thinking long and hard over the past week about how I should word my defense of the current newsgroups. Fortunately, I found a previous post from my archives that almost perfectly reflects my entire opinion on the matter. It is in response to Gary Coffman KE4ZV, and also offers a glimpse of his opinion on the matter. The only point I omitted was to defend the rec.radio.swap newsgroup as a productive way of shunting off the hundred-or-so daily forsale messages into their own classified ad section such that they don't overwhelm the amateur radio discussion forum(s). Experiences in other newsgroups indicate that two broad categories of postings, forsale/marketplace, and "personal," advertisements tend to overwhelm discussion forums and are best broken out into their own newsgroups.

I was hoping that Gary could have joined the discussion by now, as he has historically been the most vocal opponent of the current newsgroups, and one of the main reasons why Jeff Herman KH2PZ and I decided to hold this "Vote of Confidence" (Jeff and I fall into the "pro" camp on the current newsgroups, and felt that this vote would be useful to refresh and reinforce our current understanding of reader consensus, if there truly is one). Perhaps Gary will now join us and elaborate on his reasons why the current arrangement is so damaging, and what we would have to gain from merging back into a single amateur radio newsgroup.

I urge everyone to read the following, offer their own opinions (either in support or rebuttal) here on rec.radio.amateur.misc, and vote in the Straw Poll when it is announced by our third-party votetaker from the Usenet Volunteer Votetakers (UVV) around the end of May, 1998.

>way, segregated by mode, by license class, etc. Society in general found
>segregation a bad idea way back in the 1950s, but amateur radio does
>tend to be the last bastion of obsolete ideas.

Gary's usually right on target most of the time, but I'm afraid his
otherwise creative metaphors don't completely hold up for the argument
that he's trying to make. At the very least, it would be disingenuous
to make sweeping statements about all rec.radio.amateur.* newsgroups
especially when characterizing them as a corollary to the alleged evils
of "Incentive" licensing or the definite evils of segregation.

With the exceptions of .policy and .misc, which by nature are probably
catch-alls for a lot of cruft anyway (think about it, by definition one
group is for flamage, the other group is for subjects that don't fit
anywhere else under rec.radio.amateur.*), the special-topic newsgroups:

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors
rec.radio.amateur.digital.misc
rec.radio.amateur.dx
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.space

HAVE stayed substantially on-topic throughout their existence.
Furthermore, like stock splits and initial public offerings on Wall
Street, the overall "capitalization" (in the form of positive activity,
contributions, and information) has gone up overall from when there was
just one newsgroup, even if growth of the net is taken into account.
There has also been some recent progress in topic-specific FAQ's and WWW
pages for these groups (reflecting pride of association with a
manageable and clearly-defined specialty newsgroup) that might not have
existed if it was all in one basket (consider group inaction, apathy,
and "Tragedy of the Commons" phenomena in larger and more chaotic
communities)

So-called "sacrifice" newsgroups (comp.*.advocacy is a good example) are
not without merit, as they at least provide a target for articles that
would otherwise spill into newsgroups where they would be unwelcome
(consider the "cockroach" argument given for the 147.135 repeater in
LA).

In addition, breaking newsgroups into hierarchies in response to growth
is standard operating procedure for Usenet and seems to be reasonably
successful, with exceptions few and far between, elsewhere. It seems
that technology transfer, and trying to emulate what is done

successfully in other fields, would be something that you would support.

Come one now. How is it that you have such intimate knowledge of the sort of people who can be incited to murder over a trivial dispute? Writing in the third person is transparent (Wink, wink). Speaking of inciting, are you part of that scurrilous 3950 group? I thought so. You guys are going to incite the FCC do do something rash.

But of course anyone who regularly reads the amateur groups knows
that this doesn't happen. What we have instead is hundreds of for sale
and wanted ads crossposted daily to nearly *all* of the newsgroups.
(And worse yet, the ebay and "virtual hamfest" pointers that seem to
be proliferating.) The swap group is not working to remove these posts
from the discussion groups.

Do an article count on the equipment newsgroup, the majority of posts
there are ads rather than the chartered purpose of equipment discussion.
The antenna group has an ever growing contingent of ads as well. Homebrew
ditto. Etc. In fact, there are more ads in the discussion groups than there are
in the swap group which is the sole place where they belong.

>I was hoping that Gary could have joined the discussion by now, as he

>reasons why the current arrangement is so damaging, and what we would
>have to gain from merging back into a single amateur radio newsgroup.

Simply put, the current hierarchy isn't being obeyed. It is being treated
like a single meta-group, so it might as well be a single group. At least
that way one wouldn't have to download the same post over and over
on every newsgroup. (I know that a good unix server doesn't do that,
but most people today aren't reading news on a unix system which
never shows the reader duplicates.) Most do use threaded readers,
however, so that they can follow a topic in a single newsgroup without
having to bother to look at uninteresting threads. That way, each reader

can defacto construct his own personal set of "newsgroups" to follow.
New defacto groups can be spawned at will and die as interest in particular
topics waxes and wanes. Killfiles can weed out most of the chaff. Etc.

The current hierarchy is a failure because the majority of participants
don't conform to the topic segregation that the group charters require.
And any time someone attempts to enforce the charter, a flamewar
breaks out about it. Those arguments often go on longer than the
thread which spawned them. (And certain posters who repeatedly
repost in order to try to frustrate the off topic discussions aren't helping.
Though killfiles are useful for dealing with that sort of abuse. I haven't had
to look at one of Herman or Quarnstrom's posts in over a month. Heh.)

It appears to me that people have defacto already voted on this issue
by the way they post and crosspost to the various groups. I do feel for
those getting email digests. They must really be grinding their teeth
in frustration. They can't thread, and they often are paying to download
duplicates if they subscribe to more than one digest. But the people
have spoken. They've voted with their keyboards to disregard the
group charters. They treat the hierarchy as one big meta-group.
I believe we have to recognize that defacto decision and deal with
it.

Short of moderation, which I oppose, there is no way to make the
hierarchy work as the charters require. So we can continue with
the mishmash and duplication we have now, or we can consolidate
back into a single group in fact instead of just defacto and eliminate
many many duplicate posts.

If the antennas are mounted close together, it is possible. But
if you space them well apart there should be no damage, though
the scanner will likely overload when you transmit and may
emit squeals and squawks, or just desense and go silent until
you cease transmission.

Hey there...

I have the following items I will either trade as a whole, or in part. I am looking for a dual band HT, but would also be interested in a scanner, or ??? If you have anything in mind, please email.

1. Uniden PRO 810e Base AM/LSB/USB 11 meter rig. RF Gain, Mic Gain, Clarifier, HI Cut noise filter, S/RF Meter, build in power supply. Can be converted to 10 meters. Also has a BRAND NEW hand mic. As a bonus, I'll also throw in a new RS SWR/Power Meter. All in excellent condition, virtually no scratches.
2. Realistic HTX-202 Portable HT w/ battery pack. PL En/Decode, DTMF En/Decode, etc. Good condition with rubber duck antenna.
3. Two Motorola Spirit Monitor Recievers. Both in very good shape and both with NiCAD batteries and charger. Currently set to 138.325 MHz, can be set anywhere 138-174 MHz.
4. General Electric UHF Business Band HT w/ NiCAD battery. 2 watts, 2 channel capability. Channel one programmed to 466.437 MHz. Channel Guard feature (PL En/Decode). W/battery, UHF Rubber Duck, and belt clip. Fair Shape, works excellent.
4. Motorola TeleTAC 200 Portable "Pocket" Cellular Phone w/ NiCAD battery AND Car DC Power/Charge Cord. Very good shape, works great.

Would be willing to trade anything here for ???. Please email. Thanks.

Wonder where you think money comes from to support non-commercial enterprises? Or do you think none of them have any worth?

If it were not for PBS, my television would seldom be on. And our commercial free local radio stations are the only ones where you can hear any music. The others are playing more ads than songs. It's a nationwide trend. You may have seen this in the news media or heard it on Paul Harvey last week.

Now, back to Newsline. I can live without Newsline, so I've never been a financial supporter. I'll stay with the mainline Amateur publications for news updates. True, those have an "agenda" of sorts, but I feel I get more "bank for my buck" than with the weekly Newsline reports.

PBS, on the other hand, delivers quality programming unavailable elsewhere. They always can count on a contribution from me!

It's my understanding that rec.radio.amateur.policy's charter is
discussion of amateur radio policy (operating rules/regs/customs/license
restructuring) and not amateur radio NEWSGROUP policy, which is another
kettle of fish altogether, IMHO. Newsgroups and the Internet are not
amateur radio, as has been pointed out many times by others during
*.policy debates. If it's not related to rules/regs of amateur radio
(such as Part 97, ITU treaties, etc.) then it's probably not a *.policy
topic. Therefore, I chose the .misc group as the most appropriate place
to lead discussion about the newsgroups (I have, however, retained the
original Newsgroups: line in case others disagree).

BURY RADIO SOCIETY - LECTURE PROGRAMME 1998

The Bury Radio Society is pleased to announce its Lecture Programme for the remainder of 1998 as follows:-

12th May - "RSGB Update" Linda Jopson G6QA (Regional Representative

9th June - "The CIA and RFE/Radio Liberty" Gordon Adams G3LEQ

14th July - Pedestrian Excursion with Radios

11th August - Vehicle Outing with Radios

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

The Lectures in May and June will commence at 8.00 pm but why not come along a little bit earlier and enjoy the Informal Gathering of Members from about 7.45 pm.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

Ok,
Elephant guns on 50 Mhz, a term of endearment?, (not to the wife).

But why this interminable drivel from certain (burt et al.) contributors
to this ng.

This is an AMATEUR RADIO newsgroup NOT a ~~~~~~~ ('Fucking' deleted)
platform for the gun lobby of the USA.

PLEASE take your argument elsewhere..

Blow your mind.. Smoke gunpowder.... please Burt...

my e-mail address has been corrupted to avoid 'Gun Lobby' wallies
therefore don't bother trying to reply... except via Newsgroup guns.r.us

I've had many helpful messages from the group

Thanks everyone for your reply's regarding my ADMS unit failing to
allow data up/dwn loading to my Yaesu VX-1R.
I have tried all your suggestions and still no go. However RT Systems
say that my unit serial No 7F012025 falls within a range of suspected
problems and could require a CPU & parts change to get it to operate.
This unit was purchased from Juns in Calver USA in Oct 97 & for
whatever reason they wont respond to my email for help. Has anyone
any clues how to get a response from them.

Tell it to Burp Fisher. He's the one who insists on posting anti-gun rhetoric
in his signature file.

Sorry to offend you, old chap. At least we don't have the TV police driving
around and demanding taxes each year for the privilege of watching television.

You need to come up with a name that keeps it scanner/ham related. I am
seriously concerned that if you used that monicker, you would soon be infested
with Limbaugh/Liddy/Sterns fans.

Then there was the runner-up: An infinite number of rednecks riding in an infinite number of pickup trucks fire an infinite number of shotgun rounds at an infinite number of highway signs,
eventually producing all the world's great literary works in Braille.

This is the standard crap that our countries "teachers" spew to our children every day. Notice Burt blames a gun for doing something all by itself. If he taught his students that they should accept the blame for their own actions instead of blaming "something", he would server his students and all of us better. If you look at the real world you would see that every place that has made it easier to carry a firearm to protect yourself, the violent crime rate has decreased and the streets are not flowing with blood. Even someone as mentally handicaped as Burt would like to be sure his target was unable to protect themselves.

CRIMINALS AND FOOLS WANT THE AMERICAN PEOPLE DISARMED, WHERE DOES BURT FIT IN?

When is a gun used to protect youself?
A. Only if it was fired.
B. Only if the nice young man trying to rob you was killed.
C. Only if the gun was owned by a cop.
D. Any time the crime was stopped by the threat of, display of actual discharge of the gun.

BURT can you answer the question?

This is exactly what we're talking about here. Persuasion by force. While the name calling is wrong, consider that it is this sort of attitude that leads to further restrictions on gun ownership. It portrays gun owners as violent, law-breakers, who act impulsively. Not what you had in mind, I'm sure. Threatening to kill people is generally considered uncivil.

I have 2 of those radios myself-neat!
As for xtals, any good crystal place(crystek, for example) can make them.
If the company that you deal with does not have data on the DX-Handy(or
the Mitzuo equivalent), then they need to know that the xtal has a 60 pf
shunt capacitance(32 pf is usually the norm).
You might want to send one of the old xtals along-any good crystal maker
can duplicate the parameters from it, but using your desired frequency.

>can defacto construct his own personal set of "newsgroups" to follow.
>New defacto groups can be spawned at will and die as interest in particular
>topics waxes and wanes. Killfiles can weed out most of the chaff. Etc.

By that logic, we don't even need a separate amateur radio hierarchy.
Just lump it in with all the other radio stuff. After all, many of us
follow .shortwave and .scanner, etc, and there's lots of crossposting
between those groups and the ham groups, too. Toss in the CBers while
you're at it, why don't you? After all, you can filter, thread, and
killfile well enough to see just the ones you wish, right? Sheesh!

>The current hierarchy is a failure because the majority of participants
>don't conform to the topic segregation that the group charters require.
>And any time someone attempts to enforce the charter, a flamewar
>breaks out about it. Those arguments often go on longer than the

This is not true, as I demonstrated not long ago. I sent about a
dozen or two polite requests to move a code debate to its proper
group. Most people did. Those few who flamed me in return were added
to my killfile, whereupon this newsgroup got much more peaceful and
on-topic. It's not easy to do, but peer pressure WILL work if applied

properly.

>thread which spawned them. (And certain posters who repeatedly
>repost in order to try to frustrate the off topic discussions aren't helping.
>Though killfiles are useful for dealing with that sort of abuse. I haven't had
>to look at one of Herman or Quarnstrom's posts in over a month. Heh.)

Well, then, that's your loss. I've never flamed you, so I guess you
must not have been able to handle the logic of my arguments. I used
to have a lot of respect for your knowledge and ability, Gary, but
that's fading fast as I read comments like the above.

>It appears to me that people have defacto already voted on this issue
>by the way they post and crosspost to the various groups. I do feel for
>those getting email digests. They must really be grinding their teeth
>in frustration. They can't thread, and they often are paying to download
>duplicates if they subscribe to more than one digest. But the people

But the hell with them, right? I don't follow your logic at all,
really. Those tools you mention work even better if there are
separate newsgroups, so why you want to lump everything all together
in one big group escapes me completely.

>have spoken. They've voted with their keyboards to disregard the
>group charters. They treat the hierarchy as one big meta-group.
>I believe we have to recognize that defacto decision and deal with
>it.

Yeah, people break the law, so lets abolish all laws. I don't see you
talking that way about people who ignore the rules in Part 97. All
you guys who want no-code will be happy to know that all you have to
do is just go on HF with your tech ticket, or with no ticket at all,
and Gary will be glad to defend you because "the people have spoken."

>Short of moderation, which I oppose, there is no way to make the
>hierarchy work as the charters require. So we can continue with
>the mishmash and duplication we have now, or we can consolidate
>back into a single group in fact instead of just defacto and eliminate
>many many duplicate posts.

My newsreader has crosspost management, so I never see more than one
copy of a duplicate crossposted message, even if it goes to 100
groups. Other readers have even better filters. Perhaps you should
look into one of them if that's your main problem with separate
groups.

Bu> Burt Fisher Teacher of video, broadcasting and electronics
Bu> Amateur call South Dennis, Ma. (Cape Cod)
Bu> K1OIK Gun owners kill children
===
IK> As an outsider and impartial to this I just thought I would make a
small comment (not for rebuttal just for adding to the conflab!).

In the UK I have noticed that nearly ALL recent murders of children
commited where a gun has been involved are commited by LICENSED holders
or people who have somewhere along the line been involved in a gun club
or similar.

However the biggest problem here as I am sure it is there is the illegal
guns that are avaliable on black market. This is a growing problem in the
UK aswell as in the states.

I think that although in general I am certainely not in favour of guns
and especially never in the UK, I do think that the only reason that one
would need a gun is to protect themselves against all the "OTHER" people
who need to have guns, because if there was no guns in the fist place surely
you would not need one to protect yourselfwith a gun, just mace/martial
arts/pepper spray/stun gun- etc etc ?.

I must admit after watching a LOT of USA
documentry on this subject it does seem that the attitude of a lot of people
who have guns is very frightening and they are far to immature to hold such
a weapon in their person, lets face it in the army etc, you have to undergo
a fair bit of training before you can have a gun and use it and then that is
intended for WAR!.

What compulsary gun training do USA gun holders have to
undertake before being allowed a gun....you have to pass a driving test before
you can drive a car, so do you have to do a few weeks good training befor you
can carry a gun ?. seems CRAZY if that is not the case. At the end of the day,
and I know that this is probably impossible, but if people were just a lot nicer
to each other and not so ignorant of each other then there would be far less
need for ANY weapons ?.

Just my two penny's worth...hope ya'll sort it out between ya ! :-)

Ian.

IMHO, Newsline should get rid of all those phone lines and distribute via
Realaudio or text on the Internet. That should cut costs way down.
Users who transmit the newscast thru repeaters could record onto tape
from a realaudio feed (or even use the realaudio feed "live").

Terry, JAN Crystal will make you anything you want, problem is their crystals are about $15 ea, If I were you I'd get one for 28.060 which is the QRP freq (double check this) , I think you'll find more people listening for weak signals there.

Chris,

In my humble opinion you should really have a good solid 5wpm copy, sure you can pass the test with less but then what? When you get on the air you'll have a lot more fun if you have a solid 5wpm. There are no tricks just sit down and copy at least an hour a night, I did it at a local ham class so that made things a little easier, no distractions.

As far as copying goes, my only advice is, if you don't get a character skip it ITS GONE move on to the next one and try not to read as you copy you'll have plenty of time when it's over to go back and fill in the blanks. That seems to be the one major problem for someone learning the code. You get hung up on a letter and you miss the next 2 trying to figure out one. Best luck to you.

Tim, ka8ddz

I have not seen anyone shut down by force simply because others did not agree with a post.What I have seen are accounts canceled due to repeated posts of name calling, racist remarks and
the like posted inappropriately to the wrong news group.

> I remember many people who expressed themselves here were removed by
> those who were inconsiderate (CB Rambo, Malissa etc. who eventually
> disappeared). If one disagrees with the majority, h/she must be
> removed from us.

Im not sure that CB Rambo's account was ever canceled, he chooses to come and go then reappear under yetanother name. Mellisa may have decided she's had enough. No one can kick you off of a news group Masa, but if you flame and troll as you have done time and time again you can expect someone to call your hand.

> Unfortunately, it seems it is going to happen the same thing for
> myself.

Really? What have you done that would cause your ISP to cancel your service?

> Not mentioning Mr. Burt. As far as I know, his account is
> also almost cancelled.

Prime example Masa, do you have personal contacts at Burt's ISP provider giving you this information?What information do you have that would lead you to believe Burt's account is almost canceled?

> Just you be alone. We don't care.

You do care Masa, it must bother you that people think your an idiot or you wouldn't bother telling us allhow much you don't care.

> If you want to feel superior
> over others and if you think you are the best person in the world,
> feel so. We just don't care. Maybe you will have a few friends.
> Not many.

Who's 'we' do you have a mouse in your pocket? No one's trying to be superior here Masa, the problem is you don't listen and you don't comprehend what others post. So

when you reply to someone you look like an idiot, the reason so many respond negatively to you on the news group is because your a troll. You post bizarre questions like how to talk to police on police frequencies, how to jam FM radio stations, etc. Do you think making these kinds of posts warrant a warm welcome? Having an opinion which is at odds with the majority is one thing, you on the other hand don't seem to know what your own opinion is, you contradict yourself many times in the same sentence.

> Remove us. Remove everyone. You are alone as always.

Not hardly Masa, the news group will go on just fine without you. Are you alone? lonely? Why are you so concerned about the rest of us being alone? Is being alone bad? Additionally this is very typical of your posts, telling us all what 'we' are.

> -> No follow ups wanted. <-

Then don't post to the news group , that's the purpose of a news group. Share an opinion or factand allow others to share theirs, but again when your opinion is not based on fact or is way out in left
field you can count on someone questioning your post. Not unlike you post of repeater activity in Montreal
dropping by 90% in the last year. BTW I was in Sherbrook, Quebec on business a couple weeks ago, I found PLENTY of activity in Montreal. Have you had your receiver checked lately?

> This is my last message. (don't say anything here. it's not funny.)

You've made this promise before but your still here, another reason why folks find your posts unreliable and unbelievable, and your wrong, it's very funny.

> PS: If your point is to cancel my access to ISP like you have done to
> the others, you are wasting your time. I already forwarded my
> actions to be done to my ISP as well as domain providers. You must
> be an idiot if you think you can shut my account down by saying you
> don't want to see the article that you don't agree (my opinion is
> highly relevant and no spamming as long as the content is concerned.
> I don't post xxx binaries here).

Masa I wouldn't THINK of trying to shut you down, you are an endless source of entertainment for the news groupyour posts bring a chuckle and a laugh to most everyone who reads them, that would be like threatening my
cable company with cancellation unless they remove Comedy Central. I'd never do that!

300,000 mph, huh? ~ 2x the speed of light... not likely.

110,000, _maybe_, if we're looking at tenuous, highly accelerated plasma!
That's still getting up towards relativistic speed.

1600. AURORA WATCH: *LOW LATITUDE* Auroral Activity Watch

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-03 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6ih7uv$p168@mars.online.uleth.ca>
Source record: 172973
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

LOW LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 06:55 UTC, 03 MAY

/\

VALID BEGINNING AT: 12:00 UTC ON 04 MAY
VALID UNTIL: 19:00 UTC ON 07 MAY

HIGH RISK PERIOD: 05 MAY (UTC days)
MODERATE RISK PERIOD: 04 - 06 MAY

PREDICTED ACTIVITY INDICES: 20, 20, 60, 30 (03 MAY - 06 MAY)

POTENTIAL MAGNITUDE OF LOW LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT=24 TO 36 HOURS
MINOR BELT=36 TO 48 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: MODERATE

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM LOW LATITUDES: FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

OREGON TO NORTHERN UTAH TO WYOMING TO NEBRASKA TO IOWA TO ILLINOIS TO
INDIANA TO OHIO AND POSSIBLY NORTHER PARTS OF KENTUCKY TO
PENNSYLVANIA TO DELAWARE INCLUDING POSSIBLY WASHINGTON DC AND
NORTHERN REGIONS OF WEST VIRGINIA AND VIRGINIA. DARK SKIES WILL BE
REQUIRED FROM THESE LOWER LATITUDES. LUNAR PHASE WILL MAKE
OBSERVATIONS MORE DIFFICULT.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

UNITED KINGDOM AND NORTHERN FRANCE THROUGH MOST OF EXTREME NORTHERN
EUROPE INCLUDING ALL OF NORWAY, SWEDEN AND FINLAND, TO NORTHERN
RUSSIA. NEW ZEALAND AND SOUTHERN AUSTRALIA ALSO STAND A GOOD CHANCE
OF OBSERVING PERIODS OF ACTIVITY.

SYNOPSIS...

A significant class X1 solar proton flare observed on 02 May was
associated with a large and potentially geoeffective coronal mass ejection
that is expected to impact the Earth on 04 and particularly 05 May. This
disturbance is expected to produce a major auroral storm capable of being

observed over a few northern low-latitude regions possibly as early as late on 04 May, but most particularly on 05 May. Although the moon will be more than 60 percent illuminated by then and will not set during the night, the intensity of the activity is expected to be sufficient to be observed over many areas despite the lunar interference. As a result, this should be a better than average opportunity for low latitude dark-sky observers to witness periods of auroral activity.

There are also two additional coronal mass ejections (a total now of three) that are in-transit to the Earth. The combination of these three disturbances impacting the Earth may complicate the profile and characteristics of the ensuing auroral storm. At the present time it is almost impossible to accurately predict what the consequences will be. Activity may not be altered considerably, or it may be substantially enhanced over and above what we expect to observe, or it may simply prolong the duration of the storming for an additional 24 to 36 hours.

Low latitude observers should bear in mind that this is a Watch, not a Warning. This implies that conditions MAY develop to support observations of activity from the lower latitudes and that observers should be on the lookout for such activity. It does not mean activity will most likely become favorable.

Low latitudes are defined here as those near or below about 40 degrees in geographic latitude.

To observe the actual impact of these (and all future) disturbances in realtime and the ensuing geomagnetic, auroral and ionsopheric storms, refer to the SWARM software at: http://solar.uleth.ca/solar/www/swarm.html. This anticipated disturbance is only one of dozens that will be observed over the next several years as we ramp up toward a year 2000 maximum in solar activity. SWARM will provide complete realtime coverage of all of these events and provide you with advanced warnings of impending activity.

This warning will remain in effect until 19:00 UTC on 07 May. It will then be updated or allowed to expire.

** End of Watch **

1601. AURORA WARNING: Middle Latitude Auroral Activity Warning

RUSSIA. NEW ZEALAND AND SOUTHERN AUSTRALIA ALSO STAND A GOOD CHANCE
OF OBSERVING PERIODS OF ACTIVITY.

* Contact: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu for more
information regarding the Auroral Activity Prediction and
Simulation Software.

SYNOPSIS...

A significant class X1 solar proton flare observed on 02 May was
associated with a large and potentially geoeffective coronal mass ejection
that is expected to impact the Earth on 04 and particularly 05 May. This
disturbance is expected to produce a major auroral storm capable of being
observed over widespread middle latitude regions possibly as early as late on
04 May, but most particularly on 05 May. Although the moon will be more than
60 percent illuminated by then and will not set during the night, the
intensity of the activity is expected to be sufficient to be observed over
widespread areas despite the lunar interference. As a result, this should be
a good opportunity for middle latitude dark-sky observers to witness periods
of auroral activity.

There are also two additional coronal mass ejections (a total now of
three) that are in-transit to the Earth. The combination of these three
disturbances impacting the Earth may complicate the profile and
characteristics of the ensuing auroral storm. At the present time it is
almost impossible to accurately predict what the consequences will be.
Activity may not be altered considerably, or it may be substantially enhanced
over and above what we expect to observe, or it may simply prolong the
duration of the storming for an additional 24 to 36 hours.

To observe the actual impact of these (and all future) disturbances in
realtime and the ensuing geomagnetic, auroral and ionsopheric storms, refer
to the SWARM software at: http://solar.uleth.ca/solar/www/swarm.html. This
anticipated disturbance is only one of dozens that will be observed over the
next several years as we ramp up toward a year 2000 maximum in solar
activity. SWARM will provide complete realtime coverage of all of these
events and provide you with advanced warnings of impending activity.

This warning will remain in effect until 19:00 UTC on 07 May. It
will then be updated or allowed to expire.

ACTIVE OR LESS : 5 % POLAR LATITUDES : SEVERE
--- ---
PROBABLE SI ASSOCIATION : 90% ESTIMATED GLOBAL IMPACT: MAJOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 60
---- ---

COMMENTS:

A major class X1.1/3B proton flare on 02 May from Region 8210 was associated with a large coronal mass ejection. The characteristics of this disturbance are expected to be more condusive to geomagnetic storming than the previous major flare that produced the major geomagnetic storm on 02 May. A major to severe geomagnetic storm is expected to develop as a result of this activity. Complicating matters further are two additional coronal mass ejections that are also in-transit to the Earth from two smaller solar flares from Region 8210. The interaction of these additional disturbances with the major mass ejection associated with the X-class flare of 02 May introduces an uncertainty-factor that could either further intensify the disturbance over and above what we are currently expecting, produce widely varying levels of activity, or simply prolong activity an additional 24 to 36 hours beyond what we are currently anticipating.

The intensity of this disturbance won't be possible to determine until after the disturbance passes the spacecraft that are strategically positioned at the orbital L1 point. This will give us about 30 to 60 minutes of in-situ sampling to determine the initial intensity of the disturbance before the disturbance impacts the Earths magnetosphere. Anyone interested in observing the passage of the disturbance shock front past these spacecraft, as well as the ensuing impact with the Earth's magnetosphere and the resulting intensification of geomagnetic, auroral, and ionospheric activity should obtain the SWARM software at: http://solar.uleth.ca/solar/www/swarm.html

Solar active Region 8210 has the potential to produce additional significant activity and further influential coronal mass ejections before it passes behind the western solar limb on 08 May. Active Region 8214 is also developing to the point where we may begin to see some influential activity from there as well.

** End of Warning **

1603. Two Faced Role Model - Burt Fisher ??

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-03 00:00:00 UTC
From: chipster66@hotmail.com
Message-ID: <354e0b58.2413323@news.usol.com>

I'm sure most have seen Burt Fishers re-posting of messages he's
received from young hams that have *agreed* with his view of amateur
radio licensee's. Here's a re-posting of our "Role Model" Burt Fisher
in action responding to a young ham who *doesn't* agree with his BS.

Trent Drenon wrote in message
<01bd6bef$5bdb5ae0$226262ce@tdrenon.telis>...
>
>You must be really bored Burt. If you don't like our hobby find another
>one that you do like.
>Trent(a 16 year old ham)

In many cases "a 16 year old ham" means the same thing as pimple faced
geek.In many cases boys who are into ham radio are not part of the
mainstream of teens IN ANY way, no girlfriends, no nothing.
Thus it is you who must be bored.

I find it *laughable* that someone that has *MANY* times derided
amateurs at large for their actions actually has *WORSE* *ANTI-SOCIAL*
behavior himself.

Perhaps the old saying is true that what one *constantly* says about
others is in reality what one sees in oneself.

By now you've probably realized your error, Lee, but just in
case you haven't, 3600 seconds fill one hour. 300 kilomiles per
hour is a sluggish 83 1/3 miles per second - nowhere near the
speed of light.

>But of course anyone who regularly reads the amateur groups knows
>that this doesn't happen. What we have instead is hundreds of for sale
>and wanted ads crossposted daily to nearly *all* of the newsgroups.

Right. Just like your "observation" that r.r.a.boatanchors is full
of post regarding sail and power boats (when surely less than
a couple dozen have appeared since that group's creation), and your
"observation" that alcohol-related comments fill r.r.a.homebrew
(when probably less than a couple dozen have appeared since that group's
creation). Hyperbole is acceptable, falsehoods are not.

>(And worse yet, the ebay and "virtual hamfest" pointers that seem to
>be proliferating.) The swap group is not working to remove these posts
>from the discussion groups.

Focus on the 200+ FS and WTB ads that *do* appear on .swap daily,
rather than the few that stray from that group. The ones that stray
are usually originated by new readers or non-regular readers. Now
that the charters/FAQs are being posted monthly, along with a monthly
posting of a list of all the groups, you should see better adherence
to the hierarchy. Just be patient.

>Do an article count on the equipment newsgroup, the majority of posts
>there are ads rather than the chartered purpose of equipment discussion.

Whoever called for the creation of the .equipment group should be posting
it's FAQ/charter periodically. The advertisers should have been informed
that their ads were not welcome beginning the day that group was created.
Now it's become part of the .equipment culture. Again, periodic posting
of a dedicated FAQ would help to clear up that mistake. Why don't you
volunteer to write a FAQ for .equipment and submit it to the regular

readers of that group for approval, rather than complaining?

>The antenna group has an ever growing contingent of ads as well. Homebrew
>ditto. Etc. In fact, there are more ads in the discussion groups than there are
>in the swap group which is the sole place where they belong.

Post periodic FAQs written solely for those groups. Why leave the work for
others to do?

>Simply put, the current hierarchy isn't being obeyed. It is being treated
>like a single meta-group, so it might as well be a single group.

The readers need to be educated that a hierarchy exists; they don't
need to be herded into a single group in which you will then attempt
to dominate with your anti-code, anti-contest, anti-dx, and "fat, old,
white hams" comments.

>The current hierarchy is a failure because the majority of participants
>don't conform to the topic segregation that the group charters require.

Of which you're just as guilty. For example, rather than trimming the NG
line, you allow your discussion comments to spill over onto .swap. How
can you scold others for behavior you yourself are guilty of?

>And any time someone attempts to enforce the charter, a flamewar
>breaks out about it.

No one can "enforce" a charter. All we can hope to do is to educate
the readers of the document(s). The presentation of such FAQs has to
be done in a gentle manner so as to avoid flaming - no one likes being
told what to do, but asking them nicely with lots of pleasantries works
wonders.

>Those arguments often go on longer than the
>thread which spawned them. (And certain posters who repeatedly
>repost in order to try to frustrate the off topic discussions aren't helping.
>Though killfiles are useful for dealing with that sort of abuse. I haven't had
>to look at one of Herman or Quarnstrom's posts in over a month. Heh.)

Glad to hear it. That means I'll have the final say in this followup!

>It appears to me that people have defacto already voted on this issue
>by the way they post and crosspost to the various groups.

Help us educate them. Set a good example yourself by trimming the NG
line when you compose a followup.

>But the people
>have spoken. They've voted with their keyboards to disregard the
>group charters.

How many are aware that such documents exist? Help us to post them
on a regular basis.

>They treat the hierarchy as one big meta-group.
>I believe we have to recognize that defacto decision and deal with
>it.

Don't expect them to discover the intended purpose of the hierarchy on
their own. Help to educate them.

Just bought an Astatic 10-D and notice that it's freq. response is QUITE different from my old D-104. It's very "high-pitched" - sort of "thin" sounding. Do I have a bad 10-D, or is this typical of them? Can anyone out there supply me with the low to high range of these mikes (their home page is of no help....)?

Source record: 172995
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello. As the subject stated. Anyone interested? I tried to sell it a month or 2 ago, for 500.00, but everyone was hooked on the TS-830S Golds going for 350.00 (which seems a quaint bit odd to me). I guess the new rigs are just too appealing with their ease of use and computer controlled functions, of course they can't handle high swr, temp extremes, 160M, etc., but that's just IMHO. Anyway, anyone interested can e-mail me. Anyone in the Buffalo are especially, I will be happy to deliver and demo the radio. Thanks for your time,
Loren C.
KB2WYL
Or, if anyone will be in Dayton, and is interested.....

When they started alowing the state police here in VA to use scanners in their patrol cars they had a problem with the scanner losing sensitivity. This was because they were placing the scanner antenna right next to the 100watt vhf two way antenna operating on 159.xxx. As long as the antennas are not too close then you should be ok. I have about three feet between mine and have never had a problem.

This is a technical information bulletin; you're making the mistake of assuming that "technical" words have the same meaning they do in everyday English. "Risk" simply means "probability of occurance"; it carries absolutely no "negative" implications in this context.

[1081]

Closed Circuit Advisory

Newsline report number 1081 for release on Friday, May 1st, 1998 to follow.

<*>

The following is a QST

Another challenge to a ham band, a real life ham radio hero and more on Newslines financial crisis. These stores and more coming your way right now...

<*>

1.2 GHz threat

Ham radio could loose part of an important UHF band if the second civilian frequency for the global positioning system frequency is assigned an allocation at 1.2 GHz.

The Amateur Radio 23 cm band runs from 1240 to 1300 MHZ. A decision on whether the new, second frequency will be 1205 or 1250 MHZ is expected to be made in August. An allocation at 1250 MHZ could mean the end of hams in the band from 1240 to 1260 MHZ.

In February 1997, the Department of Transportation and the Department of Defense announced an agreement assuring civilian GPS users of a second frequency. This frequency is considered essential for critical civilian GPS uses.

According to a Department of Defense news release, the White House Commission on Aviation Safety and Security has called for the establishment of a second civil frequency as part of a broader program to maintain U.S. leadership in aviation and satellite technology. Unfortunately this leadership position could come at a high price for Amateur Radio.

(Via FCC, ARRL, W5YI)

<*>

ARRL request on bandplans gets RM instead of declatory ruling

The FCC has assigned a rulemaking number to the ARRL's request for an declaratory ruling. One that equates band plan compliance with good amateur practice.

Since the ARRL announced that it was going to seek such a ruling, there has been growing criticism of the its position among two groups. First are newer hams who use FM on two meters as their only mode. They say that the proposal is targeted directly at them because many are unwilling to abide by the so-called gentlemens agreement bandplans. These hams say there is no reason to follow a bandplan that they had no voice in creating and would not have voted to put in place. And, as previously reported, some go so far as to say that they believe no mode other than FM belongs on any ham band above 50 MHZ.

The proposal is also coming under attack from the weak signal community. They point to the ARRL's willingness to permit all bandplans to be codified as good operating practice. The weak signal people are worried that different bandplans could develop in different parts of the country. They say it would make SSB and CW DXing impossible. They say that the only acceptable solution is a single national bandplan where certain pieces of spectrum are designated as off limits to FM.

In issuing Rule Making number RM-9259, the FCC has indicated that is not going to accept the League's

call for it to issue a declatory ruling in this matter. Rather, it has set May 21st as the due date for the first round of comments. What it hears back from the ham pubic will probably be the deciding factor as to whether it will issue the ruling that the league requests, issue a formal Notice of Proposed Rule Making or simply let the matter die. Again, comments on RM-9259 are due to the FCC no later than May the 21st.

(Via FCC release, VHF Reflector, others)

<*>

Michigan Doctor ham saves lives

A retired Michigan doctor has been proclaimed as a hero after saving the lives of four men shipwrecked on a deserted island. And Earl Weston, W8BXO, did it right from the basement of his home in the town of Bloomfield.

Usually, Amateur Radio is recognized for its value during disasters. In this instance, disaster was averted.

It all started Tuesday morning, April 21. That's when Earl 'Doc' Weston, W8BXO, was monitoring the Intercontinental Traffic Net on 14.313 MHZ from his suburban Detroit, Michigan basement:

"A captain from a fifty foot sailing yacht; Capt. Heinze Schilling, HB9HFS; called in with emergency traffic.

The captain was sailing off the coast of a small island in the Bahamas and was attracted by a flashing mirror" Earl Weston, W8BXO

Four men, all believed to be Cuban refugees, were shipwrecked on that island. They had been there several days without food or water. The Coast Guard was contacted:

"The Coast Guard said '...very fine...we will get right into action.' Within an hour Capt. Heinze reported that a Coast Guard helicopter was overhead and landing to pick up the men. They were taken to the city of Nassau because they were in Bahamian waters.

Capt. Schilling certainly is a hero in this event. He even took time to go ashore to talk with the men. He certainly is a fine radio amateur." Earl Weston,

W8BXO

And so is Earl 'Doc' Weston, W8BXO, a fine radio amateur.

(Via Newsline)

<*>

Nashville Hams and CB'ers

We have more information regarding the involvement of both hams and CB radio operators in the aftermath of tornadoes that hit Nashville, Tennessee on Thursday, April 16th. According to Tom Delker, K1KY, the communications center was activated with hams responding from Sumner, Rutherford, Davidson, Dickson, Robertson, Wilson, and other Tennessee counties. For several days following the twisters, hams provided communications in support of Red Cross relief operations, primarily in the areas of feeding victims and relief workers, and assessing damage.

But hams were not alone this time. Al Smith of Brentwood, Tennessee tells Newsline that members of his off road CB group were asked by county officials to do welfare checks on several people who live in had to access areas. Smith says that the off roaders used their 11 meter equipped four wheel drive vehicles to reach over two dozen isolated homes in rural areas outside of the city.

(Via K1KY, Tn. Off-Roaders)

<*>

Newsline Special Bulletin

Here the report on Newsline financial condition. The good news is that Newsline is here this week. This is because some people close to Newsline and the Newsline staff have chipped in to pay a substantial part of the back bills. The bad news is that Newsline is still broke and could disappear without warning.

As reported last week, Newsline is currently operating without any meaningful funds. The service literally exists day to day and is struggling to survive.

Newsline must raise an estimated $1200 a month each month to keep the service operational. All support

is welcome. The address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

Now, back to the news.

(Via Newsline)

<*>

Japanese economy affecting ham radio

The combined net profits of major Japanese companies plunged almost 25 percent in the last fiscal year. This, as the slumping Japanese economy is forcing many firms to dump bad assets including investments in the United States. This say some might even impact on imported ham radio gear.

A survey by a leading Japanese financial newspaper of 1,744 listed companies shows that net profits for fiscal 1997 nosedived 24.5 percent. Non-manufacturing businesses were in particularly bad shape. Their net profits fell 51.5 percent in the fiscal year that ended March 31.

This is both good news and bad news for the domestic U.S. buyer of ham radio gear. As the Yen and dollar continue to collide, prices will continue to drop. The downside is that the slide cannot go on forever. It means lower ad lower profits that can reach a point where there is no profit at all. At that point some companies might decide to withdraw from the North American market, eventually drying up the supply of new gear available to hams.

(Via various published news reports)

<*>

Buy and Sell Website

Speaking about buying and selling, Karen Johansen, KC5FCU of Metrie, Louisiana tells Newsline that the ARES National web site has established a classifieds page. This, to help hams buy, sell or trade equipment. Karen says that this is a free service. The URL is very simple to remember. It's:

www.ares.org

(Via KC5FCU)

<*>

Radio station license revocation

The FCC has revoked a Texas radio station's license after a judge's finding that the owner engaged in a pattern of outright falsehoods, evasiveness and deception.

The Commission's action was issued on Wednesday, April 22nd. It was the first revocation of a station's license since 1993.

<*>

New WTB Chief

Still with the FCC, word that D'wana R. Terry has been named Chief of the Public Safety and Private Wireless Division of the FCC's Wireless Telecommunications Bureau. This is the bureau that oversees both the Amateur Part 97 and Citizens Radio Part 95 services. Terry has been acting chief since January.

(Via FCC Press Release)

<*>

Arnold on the radio

Bob Arnold, N2JEU, the New York state ham who runs a remotely controllable shortwave receiver on the world wide web is about to become a personality on the radio. Bob tells Newsline that he has completed talks with Radio New Zealand International to host a seven minute computer report as part of their bi-weekly "Mailbox" program. He starts on the air in late May.

(Via N2JEU)

<*>

New Nebraska EC

Matt Anderson, KA0BOJ has been appointed the Emergency Coordinator for Saunders County, Nebraska. He replaces Jim Sweeney, KB0DYY.

(Via news release)

<*>

Five year old YL passes element 1A

A New Jersey pre-teen is on her way to becoming the nations youngest ham radio operator. On Saturday, April 25, Ashley Kopacki, age 5, passed her 5 word per minute Morse code test at an ARRL VEC administered examination session hosted by the County Line Amateur Radio Club.

Ashley is a kindergarten student in Mount Olive, New Jersey. She frequently attends radio club meetings with her father Dave Kopacki, KF2EW. There, she helps with the sign in sheets, and is Official Cookie Taster. Ashley now has a year to study for the Novice written exam.

(Via Hudson Division Loop)

<*>

Big passing grade

A Las Cruces, New Mexico, radio club had eleven candidates pass their Technician exam after a recent Friday night, all day Saturday, and half a day Sunday weekend course.

According to information supplied by Jay Miller, WA5WHN, Mesilla Valley Radio Club had eighteen at the start. Eleven passed both elements, two more passed one element, but five failed both elements. The club also had two upgrades to Tech Plus and one attempt to upgrade to Extra. That candidate passed the theory but failed the code.

K5OI coordinated the effort with help was from five other hams. Tim says that it was heavily based on the ARRL video tapes and the accompanying workbook. This was a lot of work but it was well worth the effort.

(Via WA5WHN)

<*>

The Ian Varley Fund Established

Ian Varley, N2XUB, is in need of assistance from his fellow hams. This, according to Brenda Lee Spagna, N2TTO, writing in the Hudson Division Loop newsletter Spagna says that Ian, who has had epilepsy since childhood, is now also suffering from failing eyesight and frequent seizures. Arrangements have been made for an animal handler called Sheppy's Disability Dogs to training a puppy

to act as Ian's companion and to come to his aid in time of a seizure. The pup will be able to press an alarm pedal in the Varley home and stay by Ian's side until help arrives.

Spagna says that having a dog like this will give Ian back his independence. It will let him go back to enjoying his club meetings and helping out with radio communications at the various charity events with which he has been so active in the past. But the price of Ian's independence will not be cheap. The cost of this dog is $4,300.

As a result, any financial help Ian and his parents can get to help pay for the dog would truly be appreciated. All donations would go directly to Sheppy's for Dogs" and marked to the attention of the 'Ian Varley Fund.' The address is:

Sheppy's Disability Dogs Inc.
125 Marie Drive
Clarksville, Tennessee
37042

For more information about the 'Ian Varley Fund,' you can contact Brenda by e-mail to:

kf2sb@bestweb.net

(Via N2TTO)

<*>

VITA-SAT

Volunteers in Technical Assistance, an organization with close ties to ham radio has received FCC authorization to launch and operate an additional satellite. The bird will be in low Earth orbit operating on 149.81 to 149.9 MHZ for uplink and 400.5983 to 400.645 MHZ as downlink. The satellite will be licensed for non-voice, non-geostationary operation in the Mobile Satellite Service.

<*>

Dayton AMSAT Eatfest

Amateur satellite operators who plan to attend the 1998 Dayton Hamvention are invited to also drop by the AMSAT-North America dinner. This years food extravaganza will be held on Friday, May 15th, starting at 7:00 p.m. at Dayton's Amber Rose Caf&#65533;. Cost including tax and tip is $20.00 per person.

Those interested are asked to please pre-register
with Ed Collins at his e-mail to:

edcollins@worldnet.att.net

<*>

UK Pirate operations

On the International front, the Radio Society of Great Britain reports that ham radio style pirate operations are on the rise in the United Kingdom. The nations Radiocommunications Agency says that the pirates are centered around 6.600 MHZ. The regulatory agency also says that it plans to take enforcement action against any unlicensed operations it hears in the 6.525 to 6.767 MHZ spectrum, This band is assigned in the U.K. for exclusive use by aeronautical services.

<*>

92 year old CW test

Congratulations to British amateur Les Breeze, 2E1FXS who has become the oldest known U.K. citizen to pass a 5 word per minute Morse code test. It was even more of a challenge for Breeze because he is blind. He was assisted in learning the code by his wife Doreen who is not a ham but studied with him in order to help him understand the code.

But Les Breeze is not finished yet. He has announced his intention to study the code and theory so he can upgrade to a full privilege U.K. Class A license.

<*>

DX

In DX, the "DX News Sheet" reports that DL1DA, is expected to be active from Mayotte as FH/DL1DA, on CW. The details on his stay are not known.

And F5PFO will be active from New Caledonia for the next three years. As of air time his callsign is not yet known.

And there are several stations active from Estonia using the special prefix ES80. This is in celebration of the 80th Anniversary of the Estonian Republic. The length of their activity is unknown. QSL as directed on the air.

And the World Association of Christian Radio Amateurs and Listeners will celebrate its 40th Anniversary with a live operation from the grounds of the Newsome South Methodist Church in West Yorkshire, England. Using a unique radio callsign GB4OWR, the on air celebration will take place the on May 5th, 6th, 8th, 9th and-10th. Listen for GB4OWR on 3.747, 7.047, 14.333, 18.133, 21.350 and 28.333 MHz. Times of operation subject to propagation and operator availability. Further information available from Harold Turner, G4YRH, at his callbook address.

Also, effective immediately the addresses and managers for the ARRL W5 and Alaska Incoming QSL Bureaus have changed. The W5 QSL Bureau now is the:

Magnolia DX Association
P.O.Box 999
Wiggins, MS
39577

The new Alaska QSL Bureau is at:

P.O.Box 520343
Big Lake, Alaska
99652

<*>

Newsline around the world

And finally, each week we recognize a bulletin station or organization that retransmits the Newsline service. This week, we are proud to announce that Newsline is now part of a Sunday Morning net in Western Australia.

Word from Will McGhie, VK6UU, that for the past eight weeks, Newsline is heard Sunday Mornings at 10:15 local time -- that's 02:15 UTC on a repeater network originating on 2 meters at VK6RAP and on 70 cm on VK6RUF, both in Perth. The linked 2 meter stations include VK6RCT, VK6RMS, VK6RAW, VK6RMW and VK6RBN. Add an FM simplex HF gateway on 29.120 MHZ in Perth and the Network is complete. Almost.

VK6UU says there is a possibility of High Frequency re-broadcast on 80M through to 15 meters depending how many HF rebroadcast stations stay on after the VK6WIA QST.

Our thanks and 73 to Will and the Hams down under who make Newsline available to Amateurs in Western

Australia.

(Via VK6UU)

<*>

With thanks to AMSAT, the ARRL, the Hudson Division Loop, Australia'a Q-News and the W5YI Report, that's all from the Amateur Radio Newsline. You can write to us at:

Newsline
P.O.Box 660937
Arcadia, California
91066

Our web page is at:

www.arnewsline.org

and our e-mail address is:

newsline@ix.netcom.com

A quick item before we go. Thanks to Hap Holly, KC9RP of RAIN, Newsline will have a booth location at the upcoming Dayton Hamvention. Hap has graciously extended an invitation for Newsline to share his booth. The location number is 719 and we hope that you can drop by.

For now, with Bill Pasternak, WA6ITF at our editors desk, we at Newsline say 73 and we thank you for listening.

W6RCA <w6rca@ibm.net> posted this drivel in article
<3543A0AC.3FE0@ibm.net>...

> Then how would you feel if we made dunking a basketball a requirement for
ham
> radio? I have a feeling that you are only satisfied if the requirements
fit
> your genetic makeup and not otherwise. There are a lot of folk that feel
that
> way.

Whaa?? Genetic makeup?? Where on earth do you get this?? Has the ARRL &
the FCC commissioned a team of genetic engineers to design the amateur
radio licensing to conform to what they would hope would be a new
generation of genetically pure Super-hams?

Methinks W6RCA has been reading the Spectator a little too much.

> > Like basketball, maybe amateur radio is not for everyone.
>
> Of course it's not. But how about a EE with a commercial radio license,
25
> years experience as an AM broadcast engineer, and RF chip design
experience?
>
> > I'd argue that with some effort many people can reach the 13 wpm level
and
> > earn a General class ticket.
>
> This person spent hundreds of hours over 20 years trying to get to 13wpm
and
> failed. Is that enough effort for you or should he commit harikari?
> --

Y'know, this is the exact same approach that I have taken with the PGA.
After 10 years of golfing 3 times a week, yet never quite being able to get
my handicap under 10, I have come to the conclusion that the game of golf,
as defined by USGA & PGA standards, is genetically biased against me, as I
will never have the depth perception skills & judgement required to become
a scratch golfer. I'm sure as hell qualified to become a tour golfer,
according to W6RCA standards, as I love the game, have worked within the
game, & I know a great deal about the game. So, having been shown the light
by W6RCA & WA6VSE, I have now adapted the approach that mastery of the game
is not required & would indeed be a waste of time; it would be much more
effective to whine & bitch about my inability to master the game of golf

until someone pays attention to me & grants me a tour card. Of course, I have yet to figure out the 'personal satisfaction' aspect yet; that is, it would have been much more satisfying to have made the tour on my own rather than having someone hand it to me. But I'm sure that will come to me later on.

And.....oh, I can hear it now!

'Dammit, since when is the ability to send/receive 20 wpm CW evidence of mastery of the art of amateur radio?!'

Well, my answer is this: Since the FCC mandated it a requirement to obtain the highest license class, then I guess it is the FCC's benchmark in this matter. To put it bluntly, as I saw in another post here, 'Them's tha rules.'

So, as I see it, you do have a couple of choices in this matter:

1. Spend 10% of the time that you waste posting drivel to this news group, spend $50 on CodeQuik, & reach 20wpm.

2. Elect ARRL board members that agree & sympathise with your opinion, & petition the FCC to change the rules (this is, at least in theory, how a democracy is supposed to operate).

3. Better yet, get yourself a political appointment to the Commission & espouse your viewpoint from that office.

4. Even better yet, run for President (of course, WA6VSE would be the logical choice as the running mate) on the Genetically Challenged Party ticket, & make your own damn rules once elected.

5. Continue to spew forth invalid & nonsensical arguments on this and other rec.radio.xxx newsgroups.

Somehow, I would guess that #5 would seem to be the most attractive option to you. Well, I'll say this-at least you're consistent.

The next message in this thread will probably be some rant about how W6RCA isn't interested in the 20wpm test anyway, as he wants to avoid the 'delusions of grandeur' that affect most Extra Class operators. How noble. Total bunk, but noble.

I'm sure that most members of No Code International mean very well, are committed to the growth of amateur radio, & are able to present their arguments in a well thought out, lucid, & logical manner. I just wish they'd send a couple of their members to this newsgroup.

Hi Ed,

Given the transient nature of your interference, suppression at the source is a problem for which I have no good answer. Even if jamming was legal it wouldn't likely help. You would interfere with yourself! Would also probably elicit even more from the truckers in retaliation.

All may not be lost. You might be able to make your system more immune to the signals. Not a bad idea, since fully legal signals, should transmitters pass by, can cause the same problem. The amp is acting as a receiver as well as an amp - it shouldn't, but apparently is.

A likely point of entry for the interference is the power line. A GOOD filter on the power line where it enters the amp may help. Beware of "junk", cheapo filters. Another very likely point of entry is the input line (guitar?). "Bypass capacitors" of the right value at amp (and maybe instrument) will short-out interfering radio freq, but not the signal from the instrument. Exact values will vary with details, but would expect 500 pf -to- .01 uf will be the value needed. Another trick is to slide ferrite beads over the line and instrument cords.

Woody

I saw it at 44N.

From the traffic I heard last night on 6meters it went as far as Lousiana.
Most of the ham radio stations I was able to contact was in the NJ area
and OH, MN. And also Main. This was all on 50.125Mhz. The HF became dead
as dead could be but 10m did open up WIDE.

>I was interested in knowing if anyone is printing their own QSL cards
>with some common publishing program such as Word .
==========

Lee,

I used Microsoft Word 97 to make my QSLs. I imported the graphics
from various sources, and inserted into the Word document. I went to
a local print shop and bought 3.5 by 5.5 card stock in mixed colors
($15.00 for 500 pieces. That's 3 cents each). Then I print them on a
laser printer. I don't know if you have priced commercially printed
QSLs, but they are MUCH more expensive!

Another advantage of printing my own QSL cards:
I can make changes at any time. I only print 20-25 at a time, so that
I won't have any 'old' cards that are wasted. In fact, I have revised
my card three times (albeit on the same theme) since August 1997.

Tips:
1. MS-Word has a feature called WordArt. Experiment with it.
2. Experiment with the formating of graphics, including
'text-wrapping'
3. Choosing the 'right' font for appearance and impact is important.
4. The resolution of graphics is important for obvious reasons.
5. Don't forget that you can import/insert spreadsheets or tables
from MS Excel. Makes a nice 'box' for the details of the contact.
6. Oh, and most important--make it fun, make it YOU!

Oh, yea, the best part is the compliments that I get from other hams
about my QSL card!

Burt, this too is getting old. Find a new one. While your argument may possibly be valid for the hams who live near you, it is not so for those living far away. Come knock on MY door and we will discuss your attitude and feelings toward ham radio. Better yet, come down for hamvention, I live in Springfield and will even provide a room for you. No threats, no insults, plain discussion on why you don't feel your attitude is a cop-out and why, if the "typical ham operator" is such a loser, why you do not try to improve things. Why you do not attempt to teach those in the service. I would think you are a liar if you said that you NEVER felt enthusiasm for the service. One usually does not put the work into it to get as far as you once were unless they were enthusiastic. It seems that something, or someone has soured your opinion, but that still does not answer my question on why you do not attempt to improve things. I am even willing to discuss these things by telephone, telegraph, direct email and any other way you wish. HF is out for a short time due to the fact that my antenna blew down and since I am PCS'ing to the DC area in June, it doesn't make much sense to put it back up right now. OK, maybe I DO have a little laziness in me occasionally :).

Uh, Burt? You kinda blew your whole argument with that one. You need
to find better sources of information. While I admit I do not have
the exact statistic I do know for fact that people are killed and
injured (including students and teachers) with knives. In many areas
it is still the preferred weapon.

Thursday, May 7, 1998, KF2GV Jack Herrick and his legal team will take on the Town of Oyster Bay on Long Island, NY to obtain approval for his 120 ft amateur radio tower. What we need is to show support for Jack by coming down to the hearing with you amateur radio name tag on. We are not asking you to speak, just be there for support.

The hearing officially starts at 7:00 PM but since we are the last case on the docket we will not be on until after 9:00 PM. So PLEASE spread the word and do all you can to support amateur radio on Long Island.

Good Advice,

I started with the TS-520S. It is very similar to the TS-830S (which is a great solid radio). The 520 can be had for about $250. It does not have all the features of the 830, but it is also solid and about half the price.

Why worry about it? If people buy this crap then they have got their own reward, haven't they?

It is the law that is the problem..... If these rigs were made to cover 26 to 28 mhz, with eprom programming to disallow easy mods to 10 meters, then the ham bands would not be impacted by these "operators" at all.
Let's face it, folks, the 11m band from 26 to 28 mhz is FREE. Nobody uses it except the outbanders; nobody wants it for any commercial purpose ANYWHERE! The use of 11m for FREEBANDING is a global thing, not just a local thing. There is a problem with misuse of the 10 meter band, but that has more to do with the type acceptance process, and the inability of government agencies to deal with the FACT of 11m operations than any other factor. These people would not be there if their radios were not made to go there, as a legal dodge.

Leigh wrote in message <6ilomkrrb1@news.rain.org>...

Yes Mike,
The ARRL expects us to be like a bunch of spineless jellyfish and roll over, take whatever they shove down our throats! Look at what happened to our 220 Mhz. band, after that cluster#*@!, 220 Mhz. popularity went right down the tubes...new equipment is next to nothing and used equipment is bringing top dollar. UPS then decides not to play on the 220 Mhz. band. Another case of payoffs and kickbacks in Newington, CT.! I wish the ARRL would spend more time protecting our bands instead of selling us out.....

Hams moved cabbies off 10M in NYC by sending CW QRO. Not likely that we'd get 26-28MHz though. I wish we'd get more BW around 10MHz, that would be great, add another 100KHz or so to 30M.

The word 'RISK' in this context means that for those making transmisions
through the areas that normally do not see the aurora, when the aurora
circle widens during these events, the transmissions are at risk of
having their signal absorbed and distorted so the person on the other
end of the transmission will have difficulty recieving it. Thus, there
is a negative implication, for airlines, ship to shore, other commercial
mobile radio comms, hams, turkeys, etc.

I heard a broadcast by w6ado in the amateur band at 7.100 Mhz, was a bunch of religious propoganda sent via morse code in both english and spanish. The call sign was transmitted approx every half hour.
There was no call for any response.
I presume this is not a legal use of the beacon priveledges of amateur radio operators, as there was no mention of the word beacon or any attempt to identify as a propagation test beacon or anything.

Broadcasting such as this, to send a religious message to an audience is not legal in the ham bands.
If anyone knows this gentleman, please ask him to cease activities, or take them to 3.950 Mhz, where the folks there will better appreciate this type of activity.

Okay, here's my dilemna.
I play guitar. I have a guitar amplifier. I live along a well-traveled highway.

When the amplifier is on, I pick up amplified cb signals from truckers who have illegally amplified cb rigs. I have to hurry and shut the amplifier off, because even with the volume turned all the way down, the signal is amplified loud enough to leave my ears ringing.

Also, I am worried about damage to my amp, I have a 1965 Fender Super Reverb, which runs on vacuum tubes. This amp is a highly sought after piece.

I am pissed off beyond belief at these hillbilly jackasses with their cb radios. Is there any way to stop this? or to jam their signals? I don't care if it's illegal, after all, no one can trace a 10 second burst of interference. What they're doing is illegal too.

/\

MIDDLE & LOW LATITUDE AURORAL ACTIVITY WARNING

WARNING UPDATED: 03:45 UTC, 04 MAY

/\

A VERY LARGE AND SIGNIFICANT interplanetary shock is currently in-transit to the Earth. This is the early arrival of the last major X-class flare observed.

This event has excellent characteristics for producing extremely large levels of auroral activity. We are currently anticipating common observations of auroral activity (even INTENSE ACTIVITY) into the low latitudes. Activity will be strongest over the high and particularly the middle latitude regions. Lunar phase won't have considerable bearing on this major event.

We expect the disturbance to actually impact the Earth's magnetosphere within the next 10 minutes (by 03:00 UTC on 04 May).

This will be a fantastic opportunity for many observers in the middle and many low latitude regions to observe an intense auroral storm event. Activity will rapidly intensify throughout the North American night time and will provide excellent opportunities to view activity, particularly from the westenr U.S. and Canada. The disturbance is expected to last long enough to provide very good views of activity from New Zealand/Australia as well as Europe.

We will update this significant event as conditions warrant.

** END OF WARNING **

1674. *** POTENTIAL SEVERE GEOMAGNETIC STORM WARNING ***

/\

POTENTIAL MAJOR/SEVERE GEOMAGNETIC STORM WARNING

UPDATED: 02:40 UTC, 04 MAY

/\

**** MAJOR INTERPLANETARY DISTURBANCE IS IN-TRANSIT TO THE EARTH ****

A very significant and powerful interplanetary shock is currently in-transit to the Earth. This event has the potential of producing extremely intense levels of geomagnetic and auroral activity, effective IMMEDIATELY.

The imbedded magnetic fields within this disturbance are very intense and appear to be well-oriented for producing very intense levels of activity. The shock from this disturbance should impact the Earth's magnetosphere by 03:00 UTC. Severe geomagnetic storming is likely to be observed thereafter.

This appears to be the early arrival of the major interplanetary disturbance associated with the last X-class flare.

A more detailed warning will be sent out as soon as possible.

** END OF WARNING **

The volume control won't help, because the interference is being picked up
after the volume control.

It's possible for a legal CB to cause interference too, but your assumtion
that amplifiers are involved could be vaild as well.

: Also, I am worried about damage to my amp, I have a 1965 Fender Super
: Reverb, which runs on vacuum tubes. This amp is a highly sought after

It's VERY difficult to damage a tube amp, except maybe the speakers

: I am pissed off beyond belief at these hillbilly jackasses with their
: cb radios. Is there any way to stop this?

You won't have much luck stopping them.

: or to jam their signals?

Jamming them would have no effect.

: I don't care if it's illegal, after all, no one can trace a 10 second
: burst of interference. What they're doing is illegal too.

Your best bet is to throw caps and/or inductors(ferrite beads will do) on
the tube grids.
But first, try unplugging the guitar cable-if the problem goes away, then
if the plugs open, put a ferrite bead on the center lead on both ends, if
that helps, but not enough, then use a low value ceramic cap across the
center and shield leads in the plugs-the value is not critical, but if you
use too high a value, your guitar will sound muffled(loss of high freqs).
Start with a .01 Mf or .05 Mf to start.
If your cable has molded plugs, then put the parts on the jack.

Keep in mind that in Europe (ITU region 1) the band of 3900 to 4000
KHz is assigned to broadcasting.

Here on the eastern U.S. coast, I've heard many broadcasters in this
band. I've got a QSL card from Radio Swiss International a few years
back. I wrote to them mildly complaining about their QRM and they sent
me a QSL and thanked me for the reception report of their "test"
transmission. :-)

ABSOLUTELY SPECTACULAR AURORA here in Nebraska (40.29N, 96.75W).
Multiple moving greenish arcs were seen, along with brilliant narrow
rays with red tops, and lots of variety over much of the northern sky.
A nice moving curtain display was visible, sending rays up and past the
zenith at times. Things got going around 0430 UT, and were best from
0500 UT to 0600 UT. Things calmed down a bit after that (now more of a
diffuse glow with a few diffuse rays). Most of the DX powerhouses on
the medium wave BC band are gone, or sound like they are in an echo
chamber. However, I can hear almost every pipsqueak graveyard channel
station within 100 miles just as strong as they are in the daytime
(normally they are mostly burried under garbage). I love aurorae!

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and _"Amateur Radio Elmers Resource Directory [*-Z]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can

also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

I have extensive experience in ELF, VLF, and RF non-ionizing radiation tests from the Hebrew University Environmental/Occupational Department at Ein Kerem Hadassah Medical School, Jerusalem Israel. I have just returned to the USA after 13 years in the field in Israel. My tests have involved Overhead Power lines, Antenna Systems, Cellular phone, CRT's, etc. I had been on staff at the Medical School for several years, working very closely with Dr. Milton Gordon (4X1AA, SK) and Dr. Elhud Richter. My reports were used to make the environment a safer place for children and adults alike.

Assistant EC for Josephine County (Oregon) ARES/RACES

I am involved in commercial RF and wireless design, and willing to
share experience with other amateurs. I have a complete test equipment
facility for checking radios, antennas, etc.

Local NEWSLINE outlet: Program airs on the 147.30 repeater right after
the Monday night net.

I am active on HF, VHF and UHF, including voice and digital modes, and
will help in whatever areas I can for most of Southern Oregon.

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's
certified by WCARS VEC. I have served for several years as a
proofreader for the NCVEC Question Pool Committee. I work closely with
the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic
handling from almost day one, having earned my first BPL at age 16 as
a novice. I have served as Assistant EC, County EC and currently serve
as District Emergency Coordinator for ARES/RACES and District Radio
Officer for Emergency Management Area F of North Carolina. I also
coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as
an officer of the local club, the Western Carolina Amateur Radio
Society. I designed our homepage, am quartermaster of club equipment,
and carry the keys to the club repeater. I frequently teach both
theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to

Biomedical Engineering. Related to this activity, I have and use
signature analysis equipment and, depending on area and time, am
available to assist in location and identification of sources of
severe interference to radio amateur activities.

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

Keith Petersen W8SDZ

w8sdz@simtel.net

General Manager of Simtel(TM) Software Repository:

http://www.simtel.net/simtel.net/
ftp://ftp.simtel.net/pub/simtelnet/

(Formerly wsmr-simtel20.army.mil)

(simtel.net is a service mark of Walnut Creek CDROM)

Announcements regarding uploads to Simtel of amateur-radio-related software are cross-posted to:

news:rec.radio.info

[_Editor's Note:_ This outstanding archive collection, which incorporates much amateur-radio-related software, is listed here for completeness. However, as Keith gets about 200 E-mail messages a day, he strongly encourages self-sufficiency in the use of the archive. The above URL's contain several documents regarding how to download files from and upload files to this archive. There are also many other Elmers willing to answer beginning-level questions regarding accessing files via FTP and WWW. Consult the "INTERNET SERVICES" category in the Subject Quick-Search Index for a complete list.]

I'm a software engineer specializing in Macintosh development, and I've been a ham since 1982. I was first licensed at age 14, and I now hold an Extra class license. My expertise is in antenna-building and theory, CW (Morse Code), DXing, SWLing, and HF operating practices in general. I also operate mobile in a '96 Ford Ranger pickup. I'd be happy to help any new or aspiring amateur radio operators.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net
aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

* SAREX

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Volunteer Examiner (Laurel and W5YI VEC)

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for

describing complex subjects in ways that make them far easier for
laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my
station improvements and operating proficiency. I have played around
with antennas and made various station modifications to improve my
contact efficiency. Along the way I have solved some RFI problems,
built many of my station accessories, installed and built some HF
antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with
a few VE test sessions a year mostly representing the ARRL VEC with
the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in
Essex Junction, Vermont. I have been interested in electronics and
computers since a young age, but only got my amateur radio license in
1993 as a Technician at the age of 31. I got to know the code and
upgraded to Extra in February of 1994.

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also John Seney for FAQ maintenance opportunities). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.3, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message BODY. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the BODY of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and your_first_name and your_last_name are your first and last names, respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

present interests in Amateur Radio are concentrated in the following
areas:

Lambda Amateur Radio Club (LARC)

Maintainer, LARC World-Wide Web Page:

http://www.netaxs.com/~skeptic/larc/

Co-Moderator, LARC Public E-mail Reflector:

larc@seta.fi

If you're not already on LARC's E-mail reflector, you're welcome to
subscribe, even if you're not a member of LARC. All you ever wanted to
know about our E-mail reflector, including instructions on how to
subscribe and unsubscribe can be had by sending an E-mail to:

majordomo@seta.fi

with the following line appearing by itself in the BODY (not the
subject) of the message:

info larc@seta.fi

The Lambda Amateur Radio Club (LARC), is an international club for
gay, lesbian, bisexual and transgendered radio, electronics, and
computer enthusiasts (and their friends). Membership is open to all
who are supportive of sexual minorities.

Members receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as Internet Relay Chat (IRC), and follow the planning and may even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation in 1998.

If you'd like to make many new friends, consider joining our club! We'll be happy to mail you an application right away. Just send an E-mail request for an application to:

larc@net-quest.com

OSCAR (Orbiting Satellites Carrying Amateur Radio)

I have been an active satellite operator on both high-orbiting (elliptical and low orbiting satellites (LEO) since 1990. I hold satellite DXCC #85 and I currently have 210 countries confirmed on satellite. I enjoy both CW and SSB and DXing. I am a member of AMSAT.

LARC has sponsored three DXpeditions to the Caribbean focusing on satellite operating.

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region

of Germany. We provide ARRL VEC test sessions and help individuals, regardless of nationality, gain a U.S. license. This is accomplished by providing study materials and teaching. We also provide assistance in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites, and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a

Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

I have a page of Macintosh Shareware I have written:

http://www.best.com/~jluszcz/software.html

One of the programs I have written allows you to connect the Radio
Shack Digital Multimeter with PC Interface to your Macintosh Computer.
It is Apple Scriptable. The Radio Shack multi meter has a serial port

(RS-232).

It is called MacMultiMeter

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form

their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* NTS
* Packet and Digital Networking

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

NTS Training for CW, Phone, and Digital Modes:

http://cc.recorder.ca/~ve3bdm/

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message BODY. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of

useful tools for the radio amateur, including satellite tracking
software, CAD design software, SPICE, and other tools not generally
available to people running on Microsoft Windows or Apple based PC's.
(It runs 4.4BSD UNIX.) To obtain a login on the server, send a
photocopy of your current amateur license, along with a SAE and IRC
to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address
listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message BODY:

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

ampr.org IP Coordinator for California - Los Angeles County (44.16.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for

web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www.fr.flashnet.it/cgi-bin/425dxnews-list

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w#xxx and w#xxx-cis. Mail sent to w#xxx would go to your Internet address, and mail sent to w#xxx-cis would go to CompuServe. MCImail accounts have

the form w#xxx-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

Your intent to label him as a "unpopular pimple faced geek" was pretty
obvious.

Young hams that agree with your prejudices are anointed with praise
from you and their messages re posted, young hams that question your
continued participation in a pastime that you have disdain for are
slyly given the message that they are "unpopular pimple faced geeks."

Try bumping up the character speed so you hear the SOUND of a character instead of the number/order of dits and dahs. I believe 18 WPM is the normal character speed for ARRL VE code tests for both 5 and 13 WPM. At a straight 5 WPM, standard morse tempts the student to count dits and dahs too much.

18 WPM? HUH? Yep, that's right.... the characters are sent at 18 WPM, but the inter-character spaces are lengthened so the actual throughput is at the nominal speed, be it 5, 13, or whatever speed. This is called the Farnsworth

method, and is, IMHO, the ONLY way to learn code. ARRL VEC doctrine supports this view. If you will be tested by non-ARRL VEs, check first on the format of the exam before committing yourself to this method.

I had great success with WD5CID's SUPERMORSE. You can get it from my website among other places. It is shareware, BTW, and it runns beautifully under W95, and can be made to perform decently under 3.1 if you know how to tweak PIF files. It was written to run under DOS. The prog has a lot of nice features, and doesn't cost anything to try out. The shareware version is the only version, and is not crippled in any way. The doc files are rather lengthy, and worth a read just for the hints on learning Morse Code.

Tim's hints are right on the money, IMO. I think I still have a link or two at my page to a couple of sites with a lot more sound advice regarding learning the code.

One trick I would like to pass on before I close is this: get yourself one of those little microcssette recorders and tape the output of whatever program you use, taping at various speeds, varying about every minute, of both simulated QSOs and random groups. Carry the recorder with you as you walk, drive, or just hang out, and listen for a few minutes several times a day. If you don't have a pen and pad, "air write", holding an imaginary pencil. You will be training your hand, ear, and brain to work together as a team. The writing, or simulated writing, is important. Each day, to prevent memorization, record a new tape.

Well, one more trick... On the test day, be prepared to at least make an attempt at 13 wpm. Usually, the 20 WPM is given, then 13, then 5, and trying to copy at 13 is an EXCELLENT warm-up for the 5 WPM. Also, who knows... you might even pass! There is a big difference between Tech and General priveleges, so even if you think you have the chances of a tarpaper dog chasing an asbestos cat through hell of passing, give it a go anyway.

Okay, that's enuff... check my site for more stuff... it should appear in the sig.

Nothing heard so far, and conditions are good. Beacons from
Conrwall, Buxton, Powys, Dublin and Dundee are all solid here right
now.

In case you're ONLY working skeds, try 70.200 at 3pm (1400z) and beam
towards IO91 (Londonish).

Ian,
You say that there is a black market for guns in
the U.K. now - what did you think was going to happen?
And do you really think everybody turned them in because
your government told you to do so? Probably not. They didn't
in Australia.
You also forget or maybe it never entered your mind that guns
CAN be used for sporting purposes. Handguns can be used for hunting,
general plinking and for competitions. Rifles for the same thing. The
same holds true for shotguns (trap, skeet, sporting clays, etc). Not
every gun owner is out to shoot somebody and guns can be
perfectly safe if you mind your P's and Q's. If you treat
a firearm with the respect it is due, then there shouldn't
be a problem - but accidents do happen unfortunately. In
Minnesota, more kids die from accidental drownings, poisoning
and fire than they do from gun accidents. But this does really
belong on talk.politics.guns

Hello:

I am also looking for a TNC/Interface that will handle Baudot RTTY
better than my homemade AFSK modem that uses XR2206 es XR2211 chipset.

At present, I am using a Radio Shack CoCo (8-bit 6809E cpu) with my
modem, but I also have a Pentium2/233MHz.
As for software, I have only HAMCOMM, which is not setup at present
time. Any suggestions for s/w is also appreciated by me.

I was flying from Chicago to New York last night at about 33,000 feet at about 11 p.m Eastern Time when I saw below Cassiopeia and along the northern horizon, about 75 degrees in length and no more than 15 degrees in altitude, a glow that appeared just slightly greenish. At first I thought it was a cloud bank (there had been heavy fog in the Chicago area), and then I thought, maybe it's an aurora! I had never before seen one (they're not easy to make out from New York City), and I'm still not sure what it was that I saw. I must have watched it for 20 minutes or so; the glow persisted even as the jetliner winged eastward and didn't appear to change much in appearance.

Was this an aurora sighting? Any thoughts?

It's 186,000 miles per SECOND, and 110,000 mph isn't that much :)

Quick calculation shows the Earth doing about 66,000 mph in order
to make it around the sun in a year...so that's with respect to the
sun ONLY...not the galactic center...

Yes, 110,000 mph is fast, compared to (some of) our highway speeds.

When I was in Europe last year, it was reported that there were
over 800,000 illegal handguns in the UK. Given that the UK and
Ireland ban the carrying of knives in public, most folks on the
continent think the Brits a bit nuts. It is too easy to make or
smuggle weapons. Look the Afgan rebells or the Viet Cong and
what their did.

> I think that although in general I am certainely not in favour of guns

Human nature being what it is, you will always have violence. Young
have too much hormones. Without discipline, these young men cause
way to much problems in all forms of sexual behavior. Violence is
just another aspect of the sex drive. Look at your football fans,
another thing that folks on the continent see as nutty British behavior.

> I must admit after watching a LOT of USA

>

War and police work which is a form of war. And sporting activities
which are training for war (that is were sports came from). All young
men should have some training and service in military or law enforcement
(firefighting could be an alternative). Too many young men in our
societies are undisciplined. Military duty, law enforcement, and
firefighting are communal duties even more than they are professions.

> What compulsary gun training do USA gun holders have to
> undertake before being allowed a gun....you have to pass a driving test before

> need for ANY weapons ?.
>

Much less training is required than we should have. We have great
problems in training our military and law enforcement due to the
lack of experience with weapons (or martial arts).

One other thing you should think about. Gun ownership and carry
CAN be a status symbol. If the common man is banned from ownership,
watch how quickly it becomes a mark of noblity.

Sorry if this is posted multiple times, I had a little trouble with the Dejanews posting program.

I was interested in knowing if anyone is printing their own QSL cards with some common publishing program such as Word or MS Pulblisher. I wanted to get a hold of a template that would allow me to make up custom cards somewhat 'on demand'.

Has anyone done this who may have templates to share?

Thanks,

Lee Devlin N3IWP

I guess he meant 300000 KILOMETERS per second, or 300,000,000 meters/second, the figure the metric bunch uses.

SB DX @ WW $OPDX.355
Ohio/Penn DX Bulletin No. 355

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 355
BID: $OPDX.355
May 4, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, Ham Radio Outlet, WF1N, WB2RAJ/WB2YQH & The 59(9) DXReport, K3LR, W3HC, W3UR & The Daily DX, W4WX, K6CT, DJ5AV & DX News Letter, F6AXP, G4BUE & DX News Sheet, G4YRH, HB9ABO, HC2AE, JH1ORA, TA1BY, ZS5BBO and ZS5AKV following DX information.

1X, CHECHNYA REPUBLIC. Khamzat, 1X5AA, located near the city of Grozny, continues to be very active on 20 meters CW. Activity seems to take place between 2300 and 0130z around 14015 kHz. Many ask if this is a new entity. The answer now is NO. For DXCC purposes, if license and documentation is acceptable, 1X5AA counts for European Russia. QSL via W3HNK.

3B7, ST. BRANDON (UPDATE). A press release by Urs, HB9ABO, reports that HB9JAI just received the licence for their 3B7 DXpedition from the Mauritian Telecommunication authorities. The callsign that was issued is 3B7RF. The updated list of operators will be: 3B8CF, HB9ABO, HB9ADP, HB9AFH, HB9AFI, HB9AHL, HB9AJW, HB9BQI, HB9BQW, HB9BXE, HB9JAI, JA3IG, K5KG and W7SE. Four stations will be active from two sites on Raphael Island, one of the 22 islands making up the archipelago. The operation is scheduled to start May 7th and last until May 17th. The operation has received an ARRL Colvin Award grant of $5000 (USD) to help in funding. During the first three days, operations will be on mainly 40, 20 and 15 meters, but the announced suggested frequency are:

CW - 1826.5, 3507, 7007, 10104, 14024, 18074, 21024, 24894 and 28024
SSB - 1842, 3799, 7065, 14195, 18145, 21295, 24945 and 28475
RTTY - 7035, 14080, 18105, 21080 and 28080 kHz

The QSL information is via HB9RF: P.O. Box 37, CH-6319 Allenwinden, Switzerland. Cards received via bureau will be replied via the bureau. For further information regarding the DXpedition can be found on the WEB site: http://www.3b7-brandon.ch
ADDED NOTE: OPDX InterNet Subscribers will receive an additional bulletin

containing the complete press release by Urs, HB9ABO.

5X, UGANDA. Peter, ON6TT, signing 5X1T, has been quite active on the WARC bands. Look for him on 17 or 12 meters beginning around 1800z. QSL via ON5NT.

6th ANNUAL DAYTON HAMVENTION CONTEST DINNER will be held on May 16th at 6:30 PM. There will be inductees into the CQ Contest Hall of Fame "Class of 1998", door prizes and more. Roger, G3SXW, will be the guest dinner speaker. There is LIMITED seating of 300. Ticket sales are ahead of last year. Place your ticket order now at Radio BookStore at 1-800-457-7373 or 603-899-6957 (10 am to 6 pm eastern USA time). Ticket order deadline is approaching fast. Don't be left out!

6Y5, JAMAICA. Mitsumasa, N2HNQ, has been active on 15 and 12 meters. Activity on CW, SSB and RTTY have been reported. Look for him signing N2HNQ/6Y5. QSL via JH4IFF. Also, look for Katsuyuki, N8QDB, signing N8QDB/6Y5. Activity has been mainly on CW, with some SSB, on 12, 15, 20 and 40 meters. QSL via JR4ISF. The length of both operations is unknown.

BI, XI-SHA ISLAND (CHINA). Operators BD7IA, BD7IX, BD7JA, BD7KW, BG7NQ, and BD7YA are planning to operate from here. The team of operators call themselves the "BI7Y Ham Group" and will use the callsign BI7Y from Xi-Sha. Activity should have begun, but no QSNs have been reported. Their operation is to last until May 10th. Their departure may have been delayed because the team has mentioned that a ship only travels there once a month, and they were not sure on the exact day. The group plans to be active on 40, 20, 15, 10 meters with operations on SSB, CW and RTTY. QSL via BD7JA (QSL direct only) to: Yang, P.O. Box 1713 Guangzhou (510600) P.R. China.

BI3H, SHIJIUTUO ISLANDS (Upcoming operation and QSL Update). The group of Chinese who activated this new IOTA (AS-134) during the April 24-26th BI3H operation will be going back again. The group made 2698 QSOs (922 on CW and 1776 on SSB) in 23 hours. They will return to the island again in July during the IOTA Contest. QSL cards for the BI3H DXpedition will be printed after the July operation. QSL Manager Mac, W3HC, has received over 200 letters already for cards and some wanted their cards ASAP so they could send them in to ARRL for credit for China. The sponsors for the QSLs are: N1XME/Joe, AA8GQ/Helmut, K5AB/Alan, and AD4LX/Ray.

EP, IRAN. Ali, EP2MKO, has been active recently on the bottom portion on 20 meters (14011 kHz) bewteen 2000 and 2100z. Also, check 15 meters (21004 kHz) after 2130z. QSL via UA6HCW.

FO0/H40 SUMMARY LETTER FROM JA1BK (provided by Kaz, JH1ORA). OPDX InteNet Subscribers will receive a letter from Kan, JA1BK, as an additional bulletin.

FO0FI/FO0FR SUMMARY FROM Bob/W6RJ AND Rob/W6KR (provide by Ham Radio Oulet, HRO). OPDX InteNet Subscribers will receive information posted on the HRO WEB SITE (http://hamradio.com) as an additional bulletin.

FR5/T, TROMELIN ISLAND. Henri, FR5ZQ/T, continues to be active and has been appearing on 14272 kHz at or around 1400z, sometimes with Hito, JA8FCG. It has been mentioned by Hito that Henri doesn't like pile-ups, so he makes a list for Henri.

HP3, PANAMA. Gary, K4GZ, and Bill, W4WX, will be active from Volcan, Panama, May 12-18th. Both will be signing /HP3 on SSB, CW and RTTY. QSL to home callsigns with SASE or via bureau.

IOTA NEWS.....
Tony/WF1N and Lou/W1DIG (ex KA1DIG) will be on Pot Island (NA-136, Thimble Island Group) May 15-17th. Operation will start around 1600z Friday and end about 1800z Sunday. They plan to operate with a tribander and 40 meters dipole, and amp (provided Murphy leaves the generator alone). Look for them on/near the usual IOTA SSB frequencies. QSL to home callsign direct or via the bureau. Pot Island also has a USI number of CT-017S. Anyone needing info or have any special requests or questions can E-mail Tony at: megahertz@webconn.net

QSL INFO AND NEWS.....
TA QSL BUREAU SERVICE. Yuksel Hak, TA1BY, Secretary of the Turkish Amateur Radio Society, reports that all QSL correspondence should be made to the following mentioned address as of May 1, 1998: TRAC, QSL Bureau, P.O. Box 699, 80005 Karakoy, Istanbul - TURKEY

Several have asked for K6SLO (ex-WA6SLO). Here it is: Richard Whisler, 716 Hill Ave, South San Francisco, CA 94080-4242.

RX1, FRANZ JOSEF LAND. RX1OX/FJL was heard this past week on 30 and 20 meters CW. Check between 2100 and 2200z.

SPECIAL CALLSIGN ON THE AIR FROM AFRICA TELECOM 98. A special callsign, ZS98IARU, will be on the air from Monday, May 4th, to Saturday, May 9t, from the IARU Region One stand at Africa Telecom 98. The conference and exhibition are being held at the Expo Centre in Johannesburg, South Africa. Amateur Radio is well represented at this important ITU event. The station will be on the air during the exhibition opening times: 0800-1600z. Arrangements are being made to operate the station outside exhibition hours. A special QSL card will be issued. The QSL address is: P.O. BOX 1842, Hillcrest 3650.

SPECIAL EVENT STATION. Look for special event station GI6YM to be active until the end of the year end. The station is on the air in celebration of the 75th Anniversary of the YMCA Radio Club. Activity will be on 80-10 meters CW and SSB. QSL via K1WY.

SPECIAL EVENT STATION. The Guayaquil Radio Club (GRC) is celebrating 75 years of their foundation with a special commemorative QSL. The GRC invites all ham operators of the world to make a contact with the official GRC station, HC2GRC, on May 9th, from the 0000-2400 (Ecuador time, -5 GMT) on the HF bands.

SPECIAL EVENT STATION. The WAMRAC and the World Amateur Radio Christian Association (WACRAL) from Hudderfields will be celebrating its 40th

anniversary and will be on the air as GB4OWR during May 5-6th and May 8-10th on the following suggested frequencies and time periods. On Friday, May 8th, and Saturday, May 9th: 14333 (0600-0700z), 3747 (0700-0745z), 7045-7050 (0815-0930z), 14333 (0930-1100z), 21350 (1230-1330z), 28333 (1600-1800z) and 21350 (1800-1900z). On Sunday, May 10th: The usual Sunday a.m. U.K. WACRAL Net on 3747 kHz at 0700-0800z. The station will be in use on Tuesday the 5th and Wednesday the 6th on 3747 kHz between 0900-1100z and 1230-1430z, although other bands may be used briefly. For earlier times or later times on these two days, the frequencies assigned for Friday and Saturday can be used. NOTE: All planned frequencies are +/- QRM.

SPECIAL EVENT UPDATE. Last week in OPDX.354 we mentioned details on the special events stations that would be active during 1998 World Football Cup. This event is organized by FRANCE and the REF-UNION (French Amateur Radio Society) and they have decided to propose during this world competition a Diploma (1998 WORLD FOOTBALL CUP AWARD) for all Hams and SWLs in the world. Between June 10th and July 12th, 10 specials callsigns will be activated from each city where competition will take place (Please refer to OPDX.354 for callsigns and locations). They have now announced that French hams will use a special prefix FBC (for FootBall Cup, ex. FBC6REF). ONLY contacts/heard made between June 10th and July 12, 1998, are valid for the awards. Awards that are available:

First CLASS - 5 different TM stations plus 20 different FBC
Second CLASS
or EXCELLENCE - The 10 different TM stations plus 50 different FBC. Only a certified list of contacts/heard is necessary with application, NO QSLs
FEE: 60FF or 12 IRC or 12 U.S. green stamps (any other money is NOT ACCEPTED)
MANAGER: FB1NAN, Patrick ROCHE, 33 Rue de Terre Blanche, F-63118 CEBAZAT, FRANCE

S2,BANGLADESH. The "DX News Sheet" reports that S21K is newly licensed and is a resident on Bhola Island. This also may be a new IOTA, but no other details have been provided and no QSNs have been reported.

TJ, CAMEROON. The "DX News Letter" reports John, WB4MBU/TT8JFC, currently in Chad, will be going here for 2 months. Activity will possibly take place during May and June. No other details and dates were mentioned, but he has applied for a license.

TT8, CHAD. Erci, TT8JE, has been very active on 20 meters CW/SSB. Activity seems to be around/between 2100z and 0100z. Check 14025 and 14195 kHz. QSL via F6FNU.

VP2V, BRITISH VIRGIN ISLANDS. Look for operators Tom/K6CT, Terry/N6CW and Frederick/K9VV to be active as VP2VDX in the CQWW WPX CW Contest as a Multi/Single entry. The group will be here May 27th through June 2nd. Activity outside the contest will be on the WARC bands and 6 meters. QSL via K6CT.

VP8/G, SOUTH GEORGIA. "The Daily DX" reports that Carl, G4VFU, who will be leaving the Falkland Islands by the time you read this, plans to be active from here sometime between December, 1998, and February, 1999.

When the audio amplifier tends to pick up RF and the level of
interference is independent from setting of the volume control, I find
that the most effective way is to use ferrite rods and wind the AC
cord and speaker cords. This cures 90 per cent of all problems!!
Bypassing with capacitors can affect the audio sound and in some cases
turn the amp into an oscillator.

Ian Koenig <ian.koenig@ensign-net.com> wrote:
: If you say the guns are used for hunting or sport/hunting, then tell me why
: that person is simply not a coward. It is NOT sporting to hunt a quarry that
: has no chance is it?. I mean if you was to say hunt a bear or lion with a rifle

I actually know a fellow who used to hunt bear with a spear, and he would
jump from a tree with the spear to kill it. Funny thing is, the state
said "That is cruelty to animals!" because if he only wounded it, and was
then killed himself, the bear would have to suffer the rest of it's life
with the wound...

: REALLY SURE that the person who has just passed the test or whatever
: isn't going to go out next year and shoot a school yard full of kids to
: death when his wife leaves him and his business collapses...no guns
: avaliable ...no gun killings ?. This point has been well proven over here

How can you say it has been proven? How can you say that guns aren't
available? There are 800,000 illegal guns in the UK, every single one in the
hands of CRIMINALS. CRIMINALS who already have no respect for the law.

: IK> why is a firearm due any respect, last time i looked they only thing
: they can do is kill or damage/destroy ?. Personally I only respect things
: that do no harm to others or enhance things not destroy them. Next i'll
: be asked to pay homage to "the bomb" :-)...but I know what your saying ;-)

: Gj> be a problem - but accidents do happen unfortunately.

: IK>Accidents DO NOT HAPPEN, they are CAUSED, but that applies to a lot
: of things and not just guns, ie. the car "accident...no such thing..
: EVERY car "accident" can be put down to things like drinking, bad brakes,
: not concentrating etc etc...there are only "crashes" not accidents..
: If there was no guns there would be no "accidental" shootings would there ?.
:
: Gj> Minnesota, more kids die from accidental drownings, poisoning
: Gj> and fire than they do from gun accidents.

: IK>same answer again, nearly all of what you stated above can easily be
: associated with somebody's stupidity or neglect, if you account for the
: amount of water/poisons in the house and matches etc that kids come into
: contact with compared to how many guns they come into contact with then
: that statistic does not really show any favour to guns.

I think that the average child in Minnesota, or the Upper Penninsula of
Michigan (both places I have lived) come in contact with more than enough
guns to make this statistic worthwhile.

: IK> All I know that at least in this country, if I have an argument with my
: neighbour or shout at someone when they cut me up, the chances of them
: getting out a gun a blowing my head off are almost totally 0, and I will

But, the chances of the average mugger on the street having a weapon are
much higher, as they are professional CRIMINALS. <<- see above

Maybe this is what we need to lobby for, moving 11 metres (26 to 28 Mhz) back into ham radio. If the world radio conferrence would do so.

Hobby radio needs to be licensed. Even "community" (low power) broadcast stations should have some type of regulation. Too many rebels out there. We all need some fenses (limits) in our lives. None of us are all that wise. (And this goes for the those in government as well.) Let ham radio do the hobby stuff. Let FRS do the public version of business radio. But we do need structure.

1719. Alinco DR-570 frequency range

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-05 00:00:00 UTC
From: Helge Juch <hjuch@zvw.de>
Message-ID: <6inc5p$9eq$1@iss1.neckar-alb.de>
Source record: 172866

Does anybody know a possibility to extend the frequency range of the alinco
dr-570 up to 174 MHz??
Info please to DL3SDN <hjuch@zvw.de>

thanks a lot

73 de Helge, DL3SDN

Pssssst! Piero! In case you hadn't heard, the ARRL *OPPOSED* the
reallocation of 220MHz. But, don't let little things like "facts"
get in the way of a good rant.

Have a happy day,

Ed, If you don't have a license, CB wwill be the way to go if there is a large metropolitan area within line of sight where you can be assured that REACT or somebody will be monitoring ch 9. Ditto on ch 19 if a highway is close by. CB is mostly line of sight or a bit further, except in th mid-afternoon when you are likely to make longer distance contacts via skywave propogation. You will need to construct a better antenna than the supplied "rubber duck", tho... even a telescoping 1/4 wave whip would do. A dipole would be really great, though in an emergency, taking the time to get it up might be problematic, especially if you find yourself with a broken leg, etc. I would try to come up with about an 8 1/2 foot vertical whip....maybe an old fly rod or something with wire taped to it and clamped to the steel ferrules to allow simple takedown and erection, with the ferrules making contact between the sections. make up three pieces of wire the same length as the antenna for radials as well, and connect them to the outer braid of your coax or outer shell of the bnc connector. The radials you will stretch out away from the whip to give you a ground plane. just let them lay on the ground in an emergency. This antenna will outperform a rubber duck like nobody's business.

Note that without a license, using a ham transciever is not without it's problems. In an emergency, all bets are off... you may, shoould, MUST use whatever means of communication are at your disposal to get help. This includes a ham rig, such as a 2 meter HT. BUT.... why would a non-licened person have a 2 meter rig with him... for emergency comms? If he has a HT for emergency use, then I imagine he should also get himself a license to use it. You are buying it ahead of time to arry with you as a contingency measure, with foresight of using the HT; therefore, since you are planning to use it, you should be fully prepared to use it, and these preparations include getting a license. That is the view the FCC will take, should your emergency use of a ham rig come to their attention. You wouldn't get a fine, but I bet they would take your HT away. GET A LICENSE. The knowledge you acquire in studying for the simple

written element for the Novice or Technician license will serve you well as a basis for acquiring the communications skills that could concievably save your life some day.

2 meters is restrited even more closely to line of sight than CB.... 2 meters is in the VHF range, while CB is near the high end of the HF range. However, there could be mountain-top repeaters in your area that you could hit with your HT that relay your transmission to anywhere within lne of sight of the repeater, increasing your range considerably. with a dual band HT, you can also hit satellite repeaters when they are within line of sight. This is slightly more complex, and you should acquaint yourself with simplex operation first, then repeater use, and THEN satellite communications. Again, your rubber duck antenna is extremely inefficient, and you ought to try something like a roll-up J-pole or a collapsible Yagi or something like that. A dipole hung vertically from a tree limb would be simple too, but emergency planning would seem do dictate not relying on any external antenna support and especially rule out climbing eetc. You can download a GIF file from my website that shows you how to make a J-pole out of TV twin-lead antenna feedline. It is simple, compact, and fairly effective. Note that a vertical 1/4 wave antenna like I described for the CB is much shorter...about 1.6 feet, or 1 foot, 7 1/4 inches. A telescoping whip with a BNC mount that you can connect directly to the HT will work. Use a coathanger for a ground plane, or try touching the outer sheild of the BNC connector with a finger. The whip alone may prove sufficient.

The BEST comms for REMOTE locations, excluding satellite based systems, is HF. The problem is with the antenna, which is quite a bit larger. A 20 meter dipole, for instance, is a bit over 33 feet total length. Being only two pieces of wire and maybe 20 feet of coax, this is easily rolled up into a compact package, but you will have to erect it somehow. Maybe a fishing pole to elevate the center, and the two ends guyed to rocks would be okay in the absence of trees. A vertical would be about 16 feet 8 inches for 20 meters, and I consider this the extreme limit of practicality for an emergency vertical. 20 is open most of the day and into the evening, beginning a gradual decline after dark along your propogation path. 30 meters would be an excellent band also, as it is open practically 24 hours to somewhere, and a dipole would be about 46 feet long.

For 2 meters, you can get by with a codeless technician license, but for HF proveleges, you must demonstrate the ability to copy Morse Code. Furthermore, for the two HF bands mentioned above, you meed at least a General class license. This is not something you will be able to do in a weekend... starting from scratch, it will take you at least a month of studying for the written and the 13 WPM code test to prepare. For the 5 WPM Novice License, or the Tech Plus license, your best daytime band will be 15 meters and maybe 40 from midnight to mid-morning. The material you study for your test will acquaint you in detail regarding your operating priveleges.

The simplest way to go on HF in a small, portable package that can runn from a small battery pack is with a low power CW transciever. There are very few designs sold as complete units at retail, (The MFJ rigs are the most popular,

though a bit bulky for backpacking) but there are kits available, and designs published for homebrewers. "Rolling yer own" is not as technically involved as you might think. My first rig was homebrewed, and used a single transistor tor transmit. CW rigs are simple to build, require no computer or terminal interface, have low power consumption relative to output power, and give you far greater bang for the buck than AM or SSB transmitters when it comes to how well another station can copy your weak signal. You can expect that through at least part of the day or night, on whatever band you use, you will be able to make contact with another ham up to several hundred miles distant even with low (5 watts or less) power with a proper antenna. There is ALWAYS somebody listening, too, and there are few hams who would ignore a distress call.

If you are going to be in a really remote location, I suggest going with HF CW. If there are ham repeaters within range, go with 2 meters. If you will be near enough to a town or highway, you may find a CB to be adequate, and so need not be concerned with licensing.

REMEMBER.... the ANTENNA is usually the weak link in hand-held communication devices. keep the rubber duckie with you for backup, but make or buy something that will be more efficient when the duck just don't cut it. A couple bucks worth of wire could save your life. Check your batteries and also check your SPARE batteries before you go tramping off into the bush. Without a good set of antlers and a reliable power source, you may as well leave the radio at home and use smoke signals.

Hope this helps. check my site for a FAQ file for new hams or the ham-curious.

Thanks for the news. I guess I had to give up too early, but I had
to close down at 15:10 local time. Neither John nor I had heard
diddlysquat during the three hours we'd been listening, off and on,
up until that time. Do you know at whet time they came up on the
band for the first time? I'd be really interested to hear that they
were trying at the exact same times that we weren't hearing them.

Many thanks to all of those stations who listened for us. Due to technical difficulties (a reflector that got stuck half way in and took abt an hour to get out again; not enough bodies in time to get the beast hoisted on top of the scaffold pole; one 290r not happy with the transverter, the linear just not happy at all ...) we didn't get on the air until abt 14:30 and even then only with 5 watts. We did however manages a handfull of qso's in G, GI and GW - unfortunately I think we missed the sked with GM.

All in all quite a successful afternoon at our end and obviously a ot more work to be done before all the kit is transported up to Rathlin Island for VHF NFD. Again apologies to those stations who listenedearlier in the afternoon for us.

Thanks again

Well, I was just gonna let this thread die a peaceful death, but what the hell... I guess I'll take the bait, Ian.

I am licensed by the state of Texas to carry a concealed handgun. To get this license, I had to have no history of mental illness, no felonies, no misdemeanor offenses in the last 10 years, not owe any taxes to the State of Texas, Not have any sort of protective orders from the court against me, i.e. restraining orders against an estranged wife, etc, I had to undergo a torough background investigation by several different law enforcement agencies, I had to pay a $170 fee to the State of Texas for the license, not to mention costs for fingerprints, photos, $75 to take the required course of instruction on legal and ethical issues involved in the use of deadly forse, non-lethal conflict resolution skills, and a range session to demonstrate that I have the requisite level of competence to operate my weapon safely and accurately. Like most CHL licensees, I spend a lot of time and money practicing to maintain and even improve my skills, in the interest of safety.

I am prohibited from carrying my pistol into a bar, airport, any Federal building, school, or church. I must ensure that it is at all times properly concealed. I am fully aware that should I be required to use it in defense of my life, limb, or property, or that of anyone else, even though my actions might be readily defensible in criminal court, I still risk civil lawsuits from the grieving family of the criminal, or the criminal himself should he somehow prove capable of surviving a well-placed 45 ACP round. Neither myself nor any other CHL holder is going to start hosing down the town with hot lead.

Requirements vary from state to state, but Texas is about average regarding the requirements to be met for issuance of a license to carry. The requirements go a long way towards ensuring that those legally permitted to carry a pistol will do so in a responsible manner.

Our constitution specifically garauntees that "The right to keep and bear arms shall not be infringed". This is an immutable fact. Your opinion regarding our affection and respect of firearms in this country is therefore irrelevant, but I will continue nevertheless. That our local authorities tack on these other, arguably unconstitutional requirements shows the sobriety and restraint with which those of us who respect and demand a free, safe society think and act.

The University of Chicago, like most academic institutions, is arguably a hotbed of liberal, leftist, gun-grabbing thought. Yet the results of a study done there a few years ago show a remarkable correlation with the number of legally owned and carried firearms versus the rate of violent crime. The two are far closer to being INVERSELY than Directly proportional. The trend recently has been to become less restrictive regarding law-abiding citizen's constitutional right to bear arms. This is a direct result of experiments by pioneers in the trend such as Florida. Ft Lauderdale at one time had one of

the highest incidences of rape in the US, and local authorities there trained a small number of women in the proper, ethical, safe, and legal carriage and use of handguns. This was, of course, common knowledge, being rather well publicized. Guess what happened to the number of rapes in Ft Laud? Coincidence? some would say the plummeting rate of violent crime, particularly against women, were caused by unknown factors, but then again, the Flat Earth Society still warns against falling off the edge of the world, too. I find it interesting, the "coincidental" correlation between the harsh anti-gun laws of New York City and Washington DC with the murder rate there. Funny how fewer guns in the hands of honest men equals more criminals running amok, isn't it?

Social and historical factors beyond your knowledge play no small part in what you percieve as our preoccupational love affair with the gun. During the westward expansion of our civilization across the continent, every man in a sense was indeed an island unto himself, and mostly a man had to rely on himself and only himself for protection of his life, family, and hard-won property. A gun was the only effective equalizer against those who would terrorize or brutalize him or his. With a gun, physical strength and size were irrelevant, and reasonable skill could be acquired by most any man. The usual deciding factor was the inner conviction and resolution of the potential victim versus that of the aggressor. Admittedly, the good guy didn't necessarily win, but it beat the hell out of making no defense at all.

Our background is based more on individuality, independence, and self-reliance. The concept of "rugged individualism" and equality go pretty far back on this side of the pond, while English society derives from the feudal model, wherein the serfs looked to the lord of the manor for protection. Furthermore, over the last few centuries, a significant number of free-spirited malcontents have emmigrated, taking their high-spirited, unruly ways with them, either freely or through forced transport to penal colonies. This has left behind in your country a remarkably high percentage of people without the recklessness, cunning, lack or moral conscience, and imagination to commit violent crimes, who are best served, you might say, by a society wherein all power to answer violence with greater violence lies with the state. Thus, if I may take the liberty to say it, your anti-gun attitude, which I think is not innapropriate for your country and culture. Too bad you let immigration get so out of control... if your non-English subjects were as statistically law-abiding as the rest, your attitude would be quite appropriate, and I could see how a ban in your country on handguns except for military, occasional emergency police use, and competition would be appropriate... over THERE.

Do remember this, though... Tyranny is man's natural state. In a society where everyone is either meekly compliant or helpless, Somebody will take charge, and he might not be very nice about it. Democracy has, throughout history, typically been won at the point of a sword or the barrel of a gun. Do you think King John signed the Magna Carta just because he was, at heart, a really nice guy, and felt especially magnimonious on a particulary beautiful day passing through Runnymede? Or, let's fast-forward a few centuries to 1776. Maybe if we had said "Puhleeeeeeze!" to dear old German George the Turd to be a nice king and affix his signature to the bottom of our Declaration Of Independence, we would have never have fought a war at all, and would have been

such good friends that merely bringing up the subject to the crown of American Seamen being impressed to british warships would have brought forth affectionate apologies and have forestalled the war of 1812. Why were these things possible? because not only those in nominal authority had access to weapons. The last desparate measure against tyranny, when good men have nothing left to lose but their lives that are worth little to them in their oppressed misery, is armed revolt. So fresh was this idea in the minds of the founding fathers of this country that it was immortalized in the First Ammendment, becoming a fundamental part of the law of the land.

Criminals will always get guns somehow. Especially in our society, American Ingenuity will always enable those who want them to simply build their own firearms if they cannot be otherwise acquired. Not only that, but if the violent element should somehow magically be denied access, completely and totally, to guns, they will attack with whatever is at hand with similar results. The crippled, infirm, elderly or those who are just not physically up to the challenge of going toe to toe with one or more violent criminals who are no strangers to physical violence will still be terrorized, maimed, or killed if they have no effective protection. Not everyone can become skilled in martial arts, and frankly I question the effectiveness of formal martial arts training anyway, when up against a thug or group of them practiced in knuckle-and-skull work where death and injury happen in his classroom on a regular basis. I think pepper spray is great, and certainly better than nothing for those who cannot or will not carry a gun. If I am going out at night with the intention of drinking, I carry a can of pepper spray rather than my Para Ordnance P10-45 both to comply with the Laws of Texas and to forestall a possible tragically uncorrectible lapse of judgement. Nevertheless, I have no misconceptions about pepper spray being as effective as my 45 in preventing violence to myself or others. You shouldn't either.

You think we should give up our guns? You would need one yourself to get mine away from me... and do pry it out before my fingers get cold and stiff.

This should pretty much cover all the bases, and so will be my last post on the subject in this newsgroup.

What is our language regarding police in the US? Does War of drugs ring a bell? Americans, especially those in LA treat crime as a form of domestic terrorism.

Plus much of the fear of the governing class is that the common man will rebel, that we will have another civil war.

> IK> Only this evening I watched a programme about US police and in car camera

We hire alot of ex-special operations types (SEALS, SF -- like SAS) into law enforcement. You always hear how the military is not trained to deal with civilians and yet are best warriors are recruited heavily into law enforcement.

But that is not the case in France or Germany. Both use military police along side the local police. Both countries have long traditions of gun

ownership. And remember that the US is more German is culture than British.

It is not the training to kill, hell video games will teach that! What
sports, like football, teach is discipline, small unit teamwork and physical
conditioning. Children raised to do sports make better soldiers and police.

What the UK, Canada, Australia and Japan have in common is a respect for
noblity and aristocracy. The concept that some are better than others.
That breeding (birth) makes you a "better" person. If this is the case

then why are the masses allowed to vote? That is a much more dangerous activity.

Watch for calls to limit the birthrate of the lower (uneducated) classes. In a world that no longer needs laborers, the non-knowledge worker is seen as a drag on society. That they consume more than the produce. This much like racism to restrict individuals just based on their class.

>

These shows appeal to the lowest aspects of human nature. We like to see others crash and burn. It makes us feel superior. Besides most of the Springer shows are staged.

It takes discipline to live higher than this. It also takes passion. We hunger for passion in our lives. Look at our language. Fire water (alcohol), crash and burn (destory your life), getting hot (sex)... we use fire as a discription of our passion. The best way to get a child to avoid drugs or abuse of sex and alcohol is to build a passion in them. Hobbies like amateur radio or shooting fill that void. So does sports. For some video games do as well. But hobbies can build life skills and friendships.

If you want to fire a forest fire, the best way is to start a back fire. This is fire that burns against the forest fire so as to consume the underbrush. Hobbies can be a back fire against drugs, sex and alcolhol.

Try putting some ferrit filters on you power cord and speaker leads.
You should be able to get the information on how to do that from a
book on Amateur Radio in most libraries.

Good Luck,
Bob

It isn't just adjacent band interference either. I have chased
numerous operators off of actual ten meter frequencies by simply
operating legally.

Many think that because their radio will go there (10 meter Amateur
Band) and no one is heard, then it is OK for them to use it. Using
the band in a legal fashion tends to set up some boundaries that most
will not cross once they are aware of the location of the "line in the
sand".

Then again, I have run into a few that want ME to move away from them,
even though they are operating illegally inside the amateur band!

I guess it tends to prove that you won't find many "rocket-scientists"
on these bands or buying these cheap radios.... many don't even have a
clue of where they are to begin with (and could care less)!

1738. For Sale: IC-2AT 2m HT, BC-35 Charger

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-05 00:00:00 UTC
From: jeff@DeTray.com
Message-ID: <6invrr$g0c$1@news.monad.net>
Source record: 172885
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

For Sale

Icom IC-2AT - rugged, dependable, basic handie-talkie. No memories, no scanning, no PL. Thumbwheel frequency selection. 2 W high power, 300 mW low power. Includes IC-25U wall-plug charger, brand new 350 mAh battery pack, and belt clip. Flaws: numerals on TouchTone pad are nearly worn off from years of use; one of the plastic rings for carrying strap broken off. Still works great! $85, includes shipping to U.S. addresses via Priority Mail. Pay by VISA, Mastercard, check, or money order.

Icom BC-35 AC Battery Charger - drop-in charger for handie-talkie battery packs. Charges these Icom battery packs: BP2, BP3, BP4 (with AA NiCads installed), BP5, BP7, BP8. Includes instruction manual. $55, includes shipping to U.S. addresses via Priority Mail.

Pay by VISA, Mastercard, check, or money order.

Buy both the IC-2AT and BC-35 for $130.

Contact Jeff DeTray NK1F, jeff@detray.com, or phone (603) 242-7995.

All this BS to subsitute for your lack of self esteem derived through REAL
accomplishments.

The requirements go
>a long way towards ensuring that those legally permitted to carry a pistol
will
>do so in a responsible manner.

No one says ypu are not complying with the law but this is not the wild
west, is it?

>Our constitution specifically garauntees that "The right to keep and bear
arms
>shall not be infringed". This is an immutable fact.

That was written 200 plus years ago when there was a wild west.
What the hell do you NEED a gun for today?

>Ft Lauderdale at one time had one of
>the highest incidences of rape in the US, and local authorities there
trained a
>small number of women in the proper, ethical, safe, and legal carriage and
use

Do you feel you are going to be raped?

Funny how fewer
>guns in the hands of honest men equals more criminals running amok, isn't
it?

Fewer guns means less accidents. And more are killed accidently in the
protection than
criminals being shot.

During the
>westward expansion of our civilization across the continent, every man in a
>sense was indeed an island unto himself, and mostly a man had to rely on
>himself and only himself for protection of his life, family, and hard-won

Notes
=====

The abbreviations used in the propagation mode column are:

Tropo Tropospheric
Aurora Auroral
Spor-E Sporadic E
Meteor Meteor scatter
EME Earth-Moon-Earth (Moonbounce)
F2 F2 propagation
TEP Trans-Equatorial Propagation
Au-Es Auroral sporadic E
Iono Ionospheric scatter
FAI Field Aligned Irregularities
Rainsc Rain scatter

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/radio/dxrechow.doc.
```

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

1744. Re: Bizarre 10 Meter Rigs From Copper Electronics

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-05 00:00:00 UTC
From: Ernie Stedman <n2ojq@worldnet.att.net>
Message-ID: <6io3ot$1em@bgtnsc01.worldnet.att.net>
Source record: 172891
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Listen to the low end of 10 sometime (28-28.3) when the band
opens.....Instead of Amateur rtty and cw, you will hear hee-haw truckers
with their echo boxes and roger beeps and illegal linears----
what a country.
Thanks Copper
N2OJQ

I wonder what then your definition of accident is? I always thought that it had at least an element of UNplannedness.

For your car example "not concentrating," by definition means intentionally causing a crash.

Just a thought.

I KNOW that the vast majority of americans are not the ones on the Talk-TV like Springer and others. Also, the television shows with Police shooting (suspected) criminals is of the extreme cases and not normal. When police shoot someone in Los Angeles, it makes the news - EVERY NEWS STATION, FOR HOURS AND DAYS. These incidents are few and far between.

Case: More bullets were fired in the weekly episode of Miami Vice than in a FULL YEAR of police work in the city and entire county surrounding Miami.

American media is woefully biased to the extreme and abnormal. Americans are too numbed by it to demand a change. Those who live outside the US are usually more informed on American current events than residents. After all, just how much of the OJ Murder Trial and Clinton/Lewinsky Scandal do we really need to know? Daily updates and constant reminders are the norm.

Mark

LET ME MAKE SOMETHING CLEAR. I AM A JEWISH PERSON AND I HAVE HAD IT WITH BURT. HE IS A DISGRACE TO THIS HOBBY, HE IS INSANE, HE IS PERVERTED AND HE IS A COWARD. DURING WWII THER WERE JEWS WHO COLLABERATED WITH THE NAZIS, WHETHER DIRECTLY OR BY GIVING THEIR MONEY AWAY IN RETURN FOR ESCAPE. UNTIL THE FINAL SOLUTION WAS BEGUN. GUESS WHICH BURT WOUKDVE BEEN. BURT FISHER, WITH HIS GUN HATING ATTITUDES IS A FOOL. TAKE IT FROM A PERSONAL PERSPECTIVE. IF THERE BEEN A WWIII WITH THE SOVIETS YOU BETTER BELIEVE HED BE RUNNING THE OTHER DIRECTION WHILE WE WERE SHOOTING ARROWS AT THE GROUND TROOPS AND STABBING THEM AND THROWING ROCKS AND GETTING OUR HEADS BLOWN OFF. I LOST A SON IN VIETNAM HONORABLY. THIS CHICKEN JOINED THE AIR FORCE- REALLY COURAGEOUS OF YOU. YOUR UNIFORM GET SMELLY FROM PUMPING JET FUEL ? HE RAN TO ALASKA WITH LAURA BECAUSE HE COULDNT KEEP HIS PENIS IS HIS PANTS. AND HAD WE BEEN IN A CONCENTRATION CAMP TOGETHER FISHER, I WOULD'VE FED YOU TO THEM LIKE THE RAT YOU ARE IF IT GAINED ME 10 SECONDS MORE TO LIVE.

About two years ago here in Tucson the local media had a field day over
a "GUN ACCIDENT" a teenage mental midget stole a gun and was playing
with it. His friends who were present stated "He put the gun to his
head and pulled the trigger three times and the gun accidently went off.
This was reported in all the statisics as a gun accident.

Shot himself with his left hand while using a gun that was known to
misfire. Oh, by the way he was right handed.

The kind of intereference described here will likely not be effectively attenuated, until the tubes themselves are sheilded. Steel sleeves are available at electronic shops that have a lot of old stock. Ferrite beads, and input and output bypass caps, then will be effective, however be careful about the caps chosen...They may produce audible artifacts.

1759. Bizarre 10 Meter Rigs From Copper Electronics

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-05 00:00:00 UTC
From: leigh@rain.org
Message-ID: <6ilomkrrb1@news.rain.org>
Source record: 172935
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

While doing a little websurfing, I came upon some rather surprising
10 meter radios sold by Copper Electronics, of Louisville, Kentucky.
While these cover portions of 10 meters, they are actually intended
for the CB market. Even though the 11 meter "grey market" has been
glutted with easily-expanded 10 meter VFOed rigs like the Uniden
HR-2510 and the RCI-2950, there evidently is still a strong market for
channelized "export" CBs, which have more power and/or more freqs than
the legal CB radios used in North America. Evidently Copper and other
several other US radio dealers are filling this need by selling CB
"export" radios under the guise of easily-converted 10 meter radios.

Following are a couple of examples copied from the many offered at:
http://www.copper.com/online/ham_radios.html

Galaxy 2517 Base
#G10-00017
* FEATURES:
* 10 Meter Ham Radio
* Frequency Range: 28.765 to 29.205MHz
* AM/FM/USB/LSB/CW
* 10 Watts AM/FM/CW
* 25 Watts USB/LSB
* NB/ANL, Echo, RF/SWR Meter
* Signal/Modulation Meter, 10KHz Switch
* 5 Digit Frequency Counter and Channel Display
C.O.D. Price: $ 399.99

Eagle Sidewinder 400
#E00-06002
* AM/FM/SSB
* 10 meter mobile
* 28.315 - 28.655 MHz.
* Illuminated Digital Display
* Backlit controls
* Freq. Read Out
* Last Channel Recall
* Noise Blanker
* Dual Watch
* Mic Gain
* RF Gain
* Clarifier
* 4 Watts AM/FM, 12 Watts SSB
* 2-3/64" x 6-1/2" x 7-41/64"
* Must have proper FCC license to operate this radio

* This radio is covered in Tips/Tricks video tape #9
C.O.D. Price: $ 149.99

Both of the listed models here are not intended to be used by hams. Evidently neither has a VFO, and both probably have just 40 fixed channels, with a non-"sliding" RIT. The Galaxy 2517 only covers 28.765 to 29.205, hardly a busy section of the 10 meter ham band and has a built-in echo box, a feature never used on ham radio, but widely on CB.

While many hams have converted old CB rigs to 10 meters, certainly few if any hams would spend $400 for a new channelized rig that covers a little-used section of the band, like the Galaxy 2517.

I suspect the mod to get all these rigs going on CB is very easy... While the amateur community may have partially benefited with the cheap 10/11 meter "dual banders" like the well-made Uniden HR-2510, the rigs listed on this page will certainly see very little amateur use. Certainly some will used by the pirates on the lower end of 28 mhz, and will also increase the amount of splatter on 10 meters, as they are not made to the stricter type-acceptance standards of US CB radios.

[Humor attempt] While evidently the 11 meter "grey market" makers, importers and sellers are making a lot of money, we should be grateful that other types of radio makers have stronger ethics. Ham radio would have even more problems if renegade makers of hi-power SW BC equipment decided to offer schlocky, dirty-output gear supposedly aimed at the third-world goverment broadcasters, but actually aimed at the small minority of HF-jamming hams and maniacs who broadcast on a very few notorious ham freqs.

[Humor attempt, cont.] Imagine the hypothetical "Schoenbohm/Malyasia RF Ltd." company selling its "Megalomania 50kw Xmitter":
"Type-accepted for Uganda!" "A dime a watt! 50kw for $5,000!"
"Send $29.95 for 5 minute video on how to convert the 22 meter model: move two jumpers and yer pumpin' 50,000 watts on 14.313!"
"And don't forget the $49.95 "Uncle Herb Sooper Swinger VFO Kit!"

I'd like to see the FCC and other world radio goverment agencies tighten the loopholes that lets this grey market junk be sold legally. 73 from Leigh Marrin/KM6JE.

Check out my website and download LOGBUDDY 1.0, a prog I wrote a while back. LOGBUDDY.ZIP contains the windows setup disk files. I wrote it with the intention of releasing it as shareware, and I never did, so now it's freeware; ignore the registration begs. THe zipfile is about 920k, so it will take a while to download. When unzipped, all files except the zipfile can be copied to a 1.44 floppy with room to spare. SETUP.EXE will set up the program.

The logging program has a QSL generator that stuffs the log info into a QSL template, complete with a space for remarks and pleasantries. I had in mind to print on the back side of a 3 1/2" x 5 1/2" photo. I COULD have set it up for double-sided printing but.... Naaaaaah. Anyway, check it out and I hope it proves useful.

1761. Re: Bizarre 10 Meter Rigs From Copper Electronics

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-05 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEsGrp9.8s1@netcom.com>
Source record: 172937
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I was actually considering getting one of these rigs for legal 10 meter use,
but the people of this newsgroup have consistently advised against it.
Maybe I'll buy my mom's (ex father's) TS520S rig. Anyway, do a little
more web surfing and find the mods for getting on illegal freeband freqs.
Things like "unsolder the pink wire, and plug in that loose connector
behind the PLL board". Or "Move jumper J4 from pins 1 and 2 to 2 and 3".
You don't have to be a rocket scientist to get on "freeband".

What would happen if the FCC allocated the "freeband" to amateur radio?
Could we evict the illegal operators? Not easily, I'm sure.

1762. Re: The gun owner total b

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-05 00:00:00 UTC

Message-ID: <894332509@ensign-net.com>
Source record: 172938

Gj> Ian,
Gj> You say that there is a black market for guns in
Gj> the U.K. now - what did you think was going to happen?
Gj> And do you really think everybody turned them in because
Gj> your government told you to do so? Probably not. They didn't
Gj> in Australia.

IK> They have never been legal here (not for centuries), and it is
nearly all the criminal element that have illegal weapons BECAUSE of
the fact that an ordinary person cannot have one= less guns around.
and the amnesty that you talk about was VERY succesful. However,
there are of course always going to be an element ie.drug dealers etc
that will be able to get guns in from abroad.

Gj> You also forget or maybe it never entered your mind that guns
Gj> CAN be used for sporting purposes. Handguns can be used for hunting,
Gj> general plinking and for competitions.

IK> let me ask you a question in all sincerity.
If you say the guns are used for hunting or sport/hunting, then tell me why
that person is simply not a coward. It is NOT sporting to hunt a quarry that
has no chance is it?. I mean if you was to say hunt a bear or lion with a rifle
how does it fight back when you can kill him from 100yds away or more!. Now
if a person was to have the GUTS to fight this quarry one on one then THAT is
a SPORTING game, as it is on equal terms...your cunning against thiers etc etc
is like taking a demolition crane to a game of marbles is it not ?.

As for the other sporting type , please tell that to the last batch of gun
massacres and their victims family's as everyone of the nutters who shot all
the kids etc was a member of a gun sport club or held a license for a weapon !.

Gj>not every gun owner is out to shoot somebody and guns can be
Gj> perfectly safe.

IK> i agree with you on the above to an extent, but just how can you be
REALLY SURE that the person who has just passed the test or whatever
isn't going to go out next year and shoot a school yard full of kids to
death when his wife leaves him and his business collapses...no guns
avaliable ...no gun killings ?. This point has been well proven over here
and that is why we have also banned handguns. Now I just "Know" you are
thinking "the same could be said of a car license holder who goes and
hits someone", well, yes that is true, but you could also take it to
the enth degree and say "what about the butcher who went beserk and
killed 50 people with a frozen pork chop and some mint sauce".

The issue here is guns and no other weapon bar certain gases,nuke,bacteria could potentially kill so many people in a short space of time and location ...that is what makes guns so dangerous especially automatics.. you could easily stand in a shopping parade and kill 200 people in a minute or two with an uzi or H&K or similar if you had enough bullets.....couldn't do that with a pork chop !, or car etc etc.

Gj>treat a firearm with the respect it is due

IK> why is a firearm due any respect, last time i looked they only thing they can do is kill or damage/destroy ?. Personally I only respect things that do no harm to others or enhance things not destroy them. Next i'll be asked to pay homage to "the bomb" :-)...but I know what your saying ;-)

Gj> be a problem - but accidents do happen unfortunately.

IK>Accidents DO NOT HAPPEN, they are CAUSED, but that applies to a lot of things and not just guns, ie. the car "accident...no such thing.. EVERY car "accident" can be put down to things like drinking, bad brakes, not concentrating etc etc...there are only "crashes" not accidents.. If there was no guns there would be no "accidental" shootings would there ?.

Gj> Minnesota, more kids die from accidental drownings, poisoning
Gj> and fire than they do from gun accidents.

IK>same answer again, nearly all of what you stated above can easily be associated with somebody's stupidity or neglect, if you account for the amount of water/poisons in the house and matches etc that kids come into contact with compared to how many guns they come into contact with then that statistic does not really show any favour to guns.

IK> All I know that at least in this country, if I have an argument with my neighbour or shout at someone when they cut me up, the chances of them getting out a gun a blowing my head off are almost totally 0, and I will rue the day this country ever allows guns for the public to be made avaliable as it will no longer be the relatively safe place that it is now, of course if you wish to do that, that is as you said, your constitutional right to do so, it's just that I don't see the point anymore, violence breeds violence and all the time that people carry guns, people will want them to defend themselves from the same people.......vicious circle!.

But this does really
Gj> belong on talk.politics.guns
Gj> Gary

IK> Agreed, lets drop the thread then...

thanks for your view on things.

IK> if you want to continue this debate via direct mail then i am glad to do so as I find it very interesting and stimulating..and I DO value your argument although it may seem to you that i don't, and I am "trying" to see it from your side aswell, even if I find it hard...maybe if I was to know more REAL reasons why the americans seem to "need" guns so much than I could undertand your culture more....ain't that what the net is largely about :-).

byeeee

Ian Koenig.

1763. Re: The gun ownership and

N9> When I was in Europe last year, it was reported that there were
N9> over 800,000 illegal handguns in the UK. Given that the UK and
N9> Ireland ban the carrying of knives in public, most folks on the
N9> continent think the Brits a bit nuts. It is too easy to make or
N9> smuggle weapons. Look the Afgan rebells or the Viet Cong and
N9> what their did.

IK> I would question the honesty of that figure, I don't think it
is quite THAT high although I know it is not that good either.

Look at your football fans,
N9> another thing that folks on the continent see as nutty British
N9> behavior.

IK> I certainly agree with the football fan comment, personally i HATE
football and think that all those idiots that use violence as they do
should be locked up indefinately so that decent people and their
families can enjoy the sport again .

N9> War and police work which is a form of war.

IK> that is the sort of attitude I find VERY worrying, police work should
NEVER be seen as a form of war, that is the thinking that gets people hurt
and is probably something to do with the polices reaction towards civilians
nowadays, and vice-versa.

IK> Only this evening I watched a programme about US police and in car camera
footage from the police cars etc (inc.helicopters) and quite frankly me
and my missus where appauled. In nearly EVERY clip the police shot the crap
out of someones car even if they were armed or not !.There was one instance
where a guy was stopped for something minor and he had no record and was not
wanted for anything but when he carried on and did not stop they must have
fired I reckon nearly 20 rounds into his car tyres and bodywork !, what the
hell for, and that is the sort of thing I see that comes of the above way
of thinking.

Over here they have to get permission from an inspector
(i belive) before a gun is allowed to be even issued for use, let alone used
and that is only if the offender is belived to be or, is known to have a gun.
and nearly ALL the police officers I have spoken to , including those in the
family do not want guns as a standard issue and never will, as we have found
if the police did carry guns all the time the number of guns held illegaly
would go up at a ridiculous rate as all the criminals would then arm aswell.

And sporting activities
N9> which are training for war (that is were sports came from)

IK> Jesus !, I really hope you do not make your kids out there think like
that, while training for the 100 metres they are training to kill someone;-)

. All young
N9> men should have some training and service in military or law
N9> enforcement (firefighting could be an alternative). Too many young
N9> men in our societies are undisciplined.

IK> Could not agree more !. I did it :-)

Military duty, law
N9> enforcement, and firefighting are communal duties even more than they
N9> are professions.

IK> Agreed !

N9> Much less training is required than we should have.

IK> AH!, the first sign of honesty and modesty in this thread I have seen yet,
that I can respect. This is how conversations remain useful and not nasty!.

We have great
N9> problems in training our military and law enforcement due to the
N9> lack of experience with weapons (or martial arts).

IK> How do you mean, with your countries history of guns I would have
thought your agency's and etc had a lot of experience?.

N9> One other thing you should think about. Gun ownership and carry
N9> CAN be a status symbol. If the common man is banned from ownership,
N9> watch how quickly it becomes a mark of noblity.

IK> I see your point on that one, but without trying to stereotype anybody
it is the "common" man at present who is the most dangerous with a gun in
his hand or so it seems ?.

I have no doubt really that
part of my worry of safety if i went out there is all the crap we are
bombarded with over here about USA like the american police shows showing
all the gun related killings and all the chat shows showing just how
ridiculous americans can be.....please tell me most peole are NOT like
they are on oprah/sally/springer etc...I really hope they are not or the
whole country must be seriously deranged :-).

PS If you wish to carry on this debate, feel free to mail me direct and free
up this newsgroup as we should not really be talking about this here. If you
are willing to carry on the conversation in this friedly manner then I am happy
to debate the issue with you via e-mail, as I do find it's various angles rather
intersting !.

Toolman (nospampoustie@concentric.net) wrote:
: Why worry about it? If people buy this crap then they have got their own
: reward, haven't they?
:
: It is the law that is the problem..... If these rigs were made to cover 26
: to 28 mhz, with eprom programming to disallow easy mods to 10 meters, then
: the ham bands would not be impacted by these "operators" at all.

To a certain extent, I'd agree that responsible freebanding is largely a victimless crime, BUT a minority of CBers DO IMPACT the 10 meter amateur band. Many times when I've been on 10 meters I've been badly QRMed by someone below 28.00 splattering wildly, or with a strong spur. A CBer whom I believe lives about 1/2 a mile from me has caused interference as high as 50 mhz.

Hence I'd like to see the worst of this junk banned, as the output of some of this grey market stuff is very dirty.

Answer to your problem...get a good audio frequency filter and put it at
the input to your
amp. That will keep those nasty CBers out of it. Else you might move away
from a major
highway.

You did not say what kind of music you play. If it is not Country Western
let me know where
you live. I am fixing to make a tour of the U. S. I will be running HF
Mbile with a 600 watt
amp and I will be sure to program that highway into my tour.

N5HDQ says:

Burt I have seen several posts from you where you accuse gun owners of thinking of a gun
as a penis. I knew that you had some mis-guided ideas about gun ownership but now I am
beginning to suspect that you also have some kind of perversion about phalic symbols.

If this is true does the School Board know about it..?

It's a bit prone to second-mixer overload on receive. The 765/775
came out a little later and seem to have benefited from experience.

Have you ever noticed that all the silent key sales in the small
ads in magazines seem to feature TS950s, FT1000s, FTONEs, and IC781s ? I
reckon that if I never buy one of these things, I might achieve
immortality.....

N5HDQ says:

Right, if you want to see a web site written by a spineless turd who likes to make personal attacks
on me and others but does not the nuts to identify go look at it.

Notice when you take the jammers link the graphic at the top of a silly looking face sticking its
tounge and thumbing it's nose it pretty well sets the mentality level of the Author.

For the other side of the story visit my site and take the 3950 Liberty Net Opinion Page.
You will not find unbased personal attacks there and for the most part the opinions are
inentified. You will also see that there are both pro and con (mostly con) opinions on
the page.

Someone do me a favor please and respond to the request for comments at the Liberty net site
with an unfavorable comment and see if those Nits really believe in freedom of speech and post it.

I would think thatthere would indeed be northern lights with this latest auroral disturbance/electromagnetic storm. New England has been socked in every night since Saturday, so we haven't seen a thing!

Uncle Bob <unclebob@ripco.com> wrote in article <6im3lh$494$1@gail.ripco.com>...
tonyh@quicklink.com wrote:

: I was flying from Chicago to New York last night at about 33,000 feet at
: about 11 p.m Eastern Time when I saw below Cassiopeia and along the northern
: horizon, about 75 degrees in length and no more than 15 degrees in altitude,
: a glow that appeared just slightly greenish. At first I thought it was a
: cloud bank (there had been heavy fog in the Chicago area), and then I
: thought, maybe it's an aurora! I had never before seen one (they're not easy
: to make out from New York City), and I'm still not sure what it was that I
: saw. I must have watched it for 20 minutes or so; the glow persisted even as
: the jetliner winged eastward and didn't appear to change much in appearance.

: Was this an aurora sighting? Any thoughts?

Probably. Spend a winter or two in Alaska and you'll never be disappointed when it comes to viewing the northern lights.

There aren't any real mods for the 271A. There are improvements if needed. One thing most 271A's will need is the trimmer caps in the PLL (2 of 'em) should be changed to a ceramic type of the same value, this is just for reliability. Someone put out a RAM card replacement years ago, for $200, but I think it is debateable if it is worth the $200. The first 200 units had some main board mods, but they were accomplished by the factory. Most mods, where incorporated into the radio due to vendor changes or accy changes, all were non-critcial.

For printing the back side with address fields, info, remarks, etc, you could try a logging prog I wrote called LOGBUDDY, which you can download from my site. The program has a QSL generator that stuffs all the log info into a WYSIWYG QSL template that can be edited before printing. I had in mind printing on the back of appropriate Photo prints, 3 1/2" x 5 1/2". Ignore registrtion begs; I am now declaring it to be freeware since I never got around to trying to distribute properly and probably never will. I don't have the old VB source code for revisions or improvements anyway.

The download file, LOGBUDDY.ZIP, is about 920 Kb, and contains all the program and setup files for LOGBUDDY and also QUIZZMASTER, a Q&A program for which the question pool database is now probably out of date... just delete it if it is in your way.

The unzippped files will all fit on a 1.44 floppy and give you a regular windows setup disk. Run SETUP.EXE and follow the prompts. W3.1 or W95.

URL is in my sig. Hope this helps somebody.

I'd like to see anyone who has had a gun to their head, and has pulled the trigger, have the stamina to pull it a couple more times....

The only time I've ever heard of someone kill themselves with multiple gunshots was when that Whitewater figure was found dead... And even though they ruled that a suicide, I think it was pretty obvious that he didn't put 5 shots into his melon all by himself....

:> Do you live in a ghetto?

Hey Burt! Get another line! This one didn't impress me the first ten times you spewed it from your mouth.

I've heard it just about as many times as I've heard you say "Well, come to my house and.." it makes me wonder: Are you just so stupid that you think someone halfway across the country is going to waste their time coming to your house? Or do you realize that this isn't going to happen, so you can just go on with your silly little game of "come and get me" so you can feel like a big tough man? Is this some sort of falic symbol? Do you need to do this to feel secure about your manhood? Do you have homosexual tendancies that make you feel a need to prove yourself like this?

I wonder how your employer would feel if they received some of your best and brightest comments in the mail? If looked at out of context, I think that you could be shown to be a likely pedophile! Not the best thing for those who work at schools.

So, if your a man- this summer you will take a little road trip, and visit everybody who posts responses to your spew on this group. If you don't, then I guess your just not a man at all, and can go back to your children at school, where you can pollute their minds and lead them into your trap of compulsive idiocy.

The best bet is to ignore what happens below 28 MHz and simply defend our present 10 meter band against intruders. (Details on how to do this available upon request.)

We don't need to mix Amateur radio and "freebanders" in the same area. That allocation belongs to somebody. Let them defend it if they want to. Let's just keep working to keep 10 meters clean.

PARG Press release

PARG International - PHANTOM'S AMATEUR RADIO GROUP INTERNATIONAL (PARG), will sponsor
the annual Dayton Activities, Dayton Dinners, and Interference Committee activities
again this year. PARG is the only visible and service orientated group for radio
hobbyists dedicated to preserving the high integrity and traditional values of amateur
radio, showcasing the hobby as attractive/fun for all, and promoting relationships
between men and women in amateur radio. The PARG Hospitality Suite will be open to all
members & guests. PARG members and friends are asked to check in on the PARG repeater
during Hamvention on 443.575 Mhz (+ offset/100 Hz) for times/locations. President
Justin Bousquet and Co-Founder Larry F Johnson are a part of the speaker program.
Topic of discussions will include LIDS, Internet, and Amateur Radio. Please see the
PARG web site HTTP://WWW.PARG.ORG or write to pio@parg.org.

>
As long as there are those who seek to take what is not theirs to take, and terrorize innocent people by application of more force than their usual victims can bring to bear, and until each of us has his own cop to follow us around and protect us, there will be a need and a purpose for honest, law abiding citizens to carry whatever means of defense they see fit, within the law.

>There is no wild west today.

The violent criminal element of society hardly misses the old "wild west". I
seem to remember an interesting event from the news a couple of years ago
regarding the mugging of a member of the House of Representatives that occurred
on the steps of the Capitol. Urban centers have become far more dangerous that
the fronteir ever was. An unarmed public is a tempting target, unlike the
settler of old who so often carried on his person the means of defense against
the sociopathic hoodlum intent on mahem and larceny.

>
>
>Real tough guy you are AS LONG AS YOU HAVE YOUR GUN, without your gun
>you are the Wizard of Oz
>
In my case, and in the case of most other armed citizens, exactly the opposite

is true. One is usually more reluctant to stir up trouble or behave with a chip on the shoulder when ready application of deadly force is conveniently at hand. Those of us raised around firearms have a respectful awe of their power, and are reluctant to incite another party to violent action while armed, due to the risk of escalation of a petty conflict. Call me too many names, Burt, and do it too close to me, and you will get it right between the running lights, if I dont have a weapon. However, If I am packing, I will leave at the first sign of belligerance in as expeditious a manner as might be required to avoid a confrontation, and I would not dream of brandishing or using a weapon unless you represented a threat to either mine or the public's safety. (As long as you are only a blow-hard troll, It is probably safe to assume that you are not dangerous, but only obnoxious until proven otherwise.)
Without a gun, to a criminal, I am just another citizen who might or might not be armed. The fact that some are armed confers a degree of protection on me, due to the uncertainty of the ease by which I could be victimized. Those who feel uncomfortable carrying a gun, or who cannot get a license to do so, or who simply do not care, come under this umbrella of protection. One can no longer be certain that an intended victim is defenseless when the common man is allowed to discreetly arm himself and is required to keep his posession or lack of a gun secret.
>
By the way, I think I can figure out why your own thought process might link the incidence of rape in Fort Lauderdale with a man getting it up where most of us agree it doesn't belong, but how in the world did you associate the "Wizard of Oz" with anything I said?

>Burt

Yes, that is obvious. Who else could it have been?

I have for sale a IC-706. Includes items below:

IC-706 MKI
FL-100 CW filter 500Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $850.00 for everything. I will pay shipping lower 48 states. I can be reached by E-mail or my phone number is 216-741-4717.

> Jon Johnson
> N9XXR

Hi Jon -- in addition to a map -- you will need a prefix list.
The prefixes for the USA and territories can be found at URL:
http://www.ac6v.com/pageab.html
This includes a list of all states and district number -- see the W
lits.
It is implied the W list includes N, K and A calls, however be aware of
the territories lists as noted below.

Confusion can arise when you hear a KG4 or a KG6 call -- these appear to
be in the US 4th or 6th district but are assigned to Guantanomo Bay Cuba
and Guam respectively. Also WH6 is Hawaii!! WH9 is Wake Island!!

Also note that the A calls only go from AAA to ALZ. The remainder of the
A allotments belong to other countries -- see URL:
http://www.arrl.org/awards/dxcc/allocation.html

So you should refer to a prefix list as well as a map.

Note that a ham can have a california district call W6, N6, K6, AC6 etc
but reside in New York. One can keep the same call these days and move
around.

As for Q-Signals -- several very long lists can be found at URL:
http://www.ac6v.com/page5.html#QS

Remember, 11 metres used to belong to amateur radio. I want
it back. There is NO call for freeband activity. We must
have 11 metres back worldwide!

If you remember, 11 metres used to belong to the hams. It would
solved so much if we got it back, worldwide. The next WARC convention
should have on its table to increase amateur HF bands.

1801. [Icom] Dave's (N3CVJ) & Piero's (N3FVG) Review of the ICOM IC-T8A - RE: 220Mhz.

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-06 00:00:00 UTC
From: Piero Sassu <n3fvgNOSPAM@worldlynx.net>
Message-ID: <355070C4.AB4B552@worldlynx.net>
Source record: 172828
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am resending this since Dayton is fast approaching.....Just F.Y.I.

Hello Everyone,
Dave (N3CVJ) and I did a review/test of an Icom IC-T8A HT this evening. The IC-T8A is Icom's latest HT which has 6M/2M & 70CM in one neat small package. The ht has wide band receive (possibly enabled by a modification). The HT was lent to me by Dave (K3VF) who purchased it from Denver Communications and was modified by the dealer at the time of purchase. One of the features of the modification was it was supposed to receive and transmit on the 220 Mhz. band, and that was the primary concern for our test.
The HT was really "deaf" on 220 Mhz. with Icom's tri-band antenna so we decided to use actual 220 Mhz. antennas for the test. An Icom 220 Mhz. rubber duckie and an AEA "hot rod" 1/4 wave telescoping antenna were used on the HT. Dave first checked the power output on 220 Mhz. using a dummy load, a Bird meter and a fully charged 10v batery. Power output was about 1 watt on the 220 Mhz. band, very acceptable for local repeater and simplex use.

The receiver was a whole different story.....
The "normal" receiver sensitivity advertised by Icom was less than .18uV. Dave tested actual sensitivity on 2 meters to be around .14uV, very hot little receiver. When going to 220 Mhz. the receiver tested to be around .35mv. It would take a signal to be 40dB stronger to open the squelch on this HT, then it would on a normal 220 Mhz. HT. With the 1/4 wave antenna attached, the HT received the 224.200 Mhz. repeater which was only a couple of miles away, with about an S1. In a nutshell, this HT is deaf on 220 Mhz., even with a good telescoping antenna attached!

Other things to note.....
The small 10 volt battery does not last long at all.
Very small, multi-function buttons are difficult to manipulate for operation.
The SMA antenna connector will make it hard to use other antennas, you have to use SMA adapters, not available at Radio Shack.
You only receive one band at a time. Not a "true" dual or tri-band like the Standard.
It is very small, (about the size of a pack of ciggerettes) and has a good receiver on the bands it was designed for.

In closing, the HT is nice for what it was designed for, especially for the price, but Dave and Piero give it "Thumbs Down" for 220 Mhz.

use.

There's also a freeware program that will do this using just a soundblaster card and a scanner.

Good reason against contracts for teachers. And another reason
why the public school system is self destructing. Clinton should
sign legislation this year allowing vouchers for private schools.

I do not believe that anyone (military, police, teachers) who works
in the public sector should be able to screen their private life.
We in the military do not have private lives, everything we do is
under the microscope.

They did appear mid-afternoon - can't remember the exact time but probably nearer 16.00BST. They were only running 5W but peaking S8/9 or so with QSB when their antenna was turned my way.

Should be good with some power but they'll need to keep turning that DL6!

Keep in mind that the T8 was not designed or advertised to work on 220.
I'll get the service manual (as soon as it gets printed) and see if there
is some way around this. I guess 220 Rx is gointg thru the 2M filter...

Isn't this much to do about nothing? It sounds like one disgruntled detractor who is still grumbling about not getting his own way.

Specifically, I am at presently (subject to change at a whim) only interested in very early radio equipment, early 50's and older. I am not in the least interested in Yaesu, Kenwood, Icom et all and much less in anything above 30 MHz (mega-cycles!). rec.radio.amateur.boatanchors serves my interest very well and although I may miss items posted in other newsgroups, the effort to wade through them far outweighs any potential reward. I have benefited greatly by obtaining otherwise unavailable schematics and information, have picked up "priceless" bargains, and sold a few on behalf of the local ham club. I have copied information and mailed it to requestors and have posted explanations in response to questions about theory and applications of equipment.

This effort will be severely compromised if old radio postings are merged with the various other interests that encompass ham radio. Further, I haven't seen the numbers of complaints about the present rec.radio organization to warrant raising the issue of reorganization.

>TNX es 73, Carl K8NU

The D-104 was designed for older AM gear but has more gain and upward
punch than the 10D.

The 10D is a flat response mic that was the rave of the early 60's SSB
gear. I found that it was very thin altho not high pitched.

Not sure of the exact facts but the D-104 is something like 200 to
5000 cps with rising characteristics at 2500 to 3000. The 10D is flat
from 300 to 3500 cps (hz now).

I had a 10D and a guy in El Salvador said I sounded "faint" . Put the
D-104 back in line an he said full punch and 20DB louder.

The 10D has a smaller audio range so maybe a Heil cartridge might do
wonders.

Thanks for the info and I'm sorry I had to close down too early to
catch them. It sounds as though their new antenna is performing. I
hope they try it out again, and perhaps even using "outdoor footwear".

Nice to see you posting here, Steve.

The only thing I would change, if possible, is to create a "for sale"
group in the rec.radio.amateur hierarchy. Having it at rec.radio.swap
seems to really confuse a LOT of people. The result is that a large
number of for sale, wanted, and swap messages get posted in every
newsgroup except the one where they belong. Perhaps if there was an
appropriate newsgroup in the rec.radio.amateur hierarchy, this would
not happen.

72/73,
Bob

Unfortunately, this is not possible. There are millions of users, and they simply would jam Amateur transmissions, out of anger and spite. The best plan is to keep them out of 10 Meters.

As for the freeband area, that is someone else's fight. If the legitimate users want to take it back, let them work out how to do so.

>Good reason against contracts for teachers. And another reason
>why the public school system is self destructing. Clinton should
>sign legislation this year allowing vouchers for private schools.

I agree that vouchers are a good idea.
The reason that students are doing poorly are primarily PARENTS.

>I do not believe that anyone (military, police, teachers) who works
>in the public sector should be able to screen their private life.
>We in the military do not have private lives, everything we do is
>under the microscope.

So a military man cannot rent an X rated movie?
Or a teacher cannot join a pro abortion group?
If a person's private life has no affect on their public duties it is no
one's
business?

What about other people like pilots, bus drivers, psychologists, doctors,
you can make the same case for "your need to know."

GE Sweep Generator Type ST-4A

This is an oldie that would fit nicely on someone's antique radio service bench to add some vintage flavor.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GE-SWEEP.JPG

I have no clue if the unit works or not, nor do I know how to use it. I know how to use tube testers only. There is one tube missing that I can see. Sold as is. What you see is all there is.

$40 or B/O, plus shipping. Pack it free.

Not gonna happen, If anything hams are going to lose spectrum not gain it.
If big companies figure out there is money in it kiss them goodbye. Besides
the fact that there is a big decline in new hams. Of course with the ARRL
giving away anything that Uncle Sam wants them too it won't be long.

I have for sale a IC-706. Includes items below:

IC-706 MKI
FL-100 CW filter 500Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $850.00 for everything. I will pay shipping lower 48 states. I can be reached by E-mail or my phone number is 216-741-4717.

There will be a one day estate sale on Saturday, May 9, in Barrington,
Illinois, about 30 miles NW of Chicago. W9TT, Bill Christman, passed
away on Valentines Day. A couple of hams have priced and sorted many
of the items. I offered to post the sale on the net, but cannot
answer any detailed questions.

Take Rt. 14 NW to Barrington. About 2 blocks past Rt. 59 turn left onto
Prospect Avenue, just across from the Ace Hardware store.
The house is the second one on the left.
146.535 talkin.
The sale will run from 10:00 AM until 3:00 PM. Ham radio and related
equipment only. On site sales only.

Drake T-4xc, TR-4, R-4c, L-4b, FS-4, power supplies, and more.
Heathkit test equipment
Older 2m FM gear- mobiles and bases
Old scopes
Keyer, mikes
Antennas
MANY old chassis, homebrew projects, components
Many boxes of ????

Priced to go!

I received a catalog (more like an advertising flyer) in the mail from a company called Tech, or had Tech in their name. They had low cost, simple 'beginner' electronic kits, and some electronics at pretty good prices.

The XYL has tossed the catalog, so I'm trying to get their number and/or web page. Does anyone know what I'm talking about?

Drop the Novice Class.

Technician - As is.
Tech Plus - As is.
General - 5 WPM, written As is.
Advanced - As is.
Extra - As is.

It's not much different as it is now, but it does give much greater
incentive to pass the 5 WPM test with the greater amount of HF spectrum
one could get by upgrading to general. It also doesn't
upset the balance of those already licensed in any class to badly.

In about 3 months I will be moving to a city where I will probably be living in an apartment building that does not permit outside antennas. Since I got back on the air 3 years ago (after 29 off, and after moving from the Midwest) I have worked all states except Maine. I would appreciate it if someone from Maine would be willing to arrange a schedule with me so I can make WAS before I am permanently off the HF bands. I can use a Slinky Dipole (32' long) for 80 or an R-7000 for 40. Please e-mail me at k2dl@juno.com, since I have never given my AOL address to anyone and therefore never check it.

1834. Liberty Net Dump Site

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-07 00:00:00 UTC
From: Curtis M LaFon <n5hdq@wf.quik.com>
Message-ID: <3551BE35.A1CE5C3D@wf.quik.com>
Source record: 172710

There were some in here making frequent posts with a link to the
Liberty Net Dump Site which I would respond to. How can I reply
with the following if you don't post the link..?

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

Do that and you will see where some spineless turd has authored a page
"jammers' where he makes personal attacks aginst myself and others.
I call him spinless because he does not have the courage to put his
identity on the page.

I have now inentified the spineless turd, he is:

W1WCR
Victor Misek
142 Wason RD
Hudson NH 03051

Don't bother looking up his phone number. You know that the likes of him
will not list his phone number in any of the directories.

You will also note that there is a graphic at the top of the 'Jammers'
page of a silly looking face sticking it's tounge out with it's thumbs
in it's ear and waving it's fingers at you. I can't imagine a mature
individual using that graphic but would expect it from a six year old.
It pretty much sets the mentality level of the Author though as you will
see if you read through the diatripe there.

Then you might want to take a look at my web site to compare the
difference in mentality, class, maturity, and in general usefullness
and balance.

If you visit the '3950 Liberty Net Opinion' Page you will notice that
I am fair about it and support free speech by posting the handfull
of opinions that oppose my view of the Liberty Net. I am waiting to
see if any opposing views against the Liberty Net show up on the LIberty
Net site. If some one posts an opposing view and it does not make it on
the page please send it to me and I will post it on my page with a note
that the Liberty Nits would not post it. This could be a good way to see
just what the Nits call Liberty and how much they support free speech.
This could be interesting.

At my site there is an antenna program I wrote, nothing fancy but a handy program if you build your own wire antennas. It is downloadable and absouletly free. I have no idea who downloads my programs so there will be no follow up with an email from me. Also if you play the Texas Lottery there is a downloadable program that generates lotto, cash five and pick three numbers . There is a link to the University of Texas for a RF Safety Level Calculator you can take that will let you see where you stand.

In other words, my life does not center around the Liberty Net as I have some balance to my site and can figure out how to do what I want to about opinions of the net blended in with some usefull stuff.

Victor is asking for pictures of the so called jammers. I Emailed him instructions on how to get to my pic at my web site and how to save a pic from a page. My pic is now there. I challenged him to post his pic at his Dump Site and pics of the Nits.

Does anyone want to make a wager on whether a gutless Idiot such as he will put his pic on his Dump Site or will he sit there in shame knowing that he has shown the group just what a Sniveling Coward he is..??

Play it again Sam..

I think that you are confusing HF with VHF/UHF. The demand for VHF/UHF
is
almost insatiable, but it appears that the demand for HF is declining as
more and more SW broadcasters are folding their tents and going to
satellites.
I suspect that the unreliability of HF won't be able to compete with the
reliability of microwave satellite links and sometime in the future
these
HF freqs will be deemed useless and given back to hams. The tough part
is going to be hanging on to our microwave allocations.

After you prove that you can Rx/Send morse code according international rules to become a General at 5 WPM why (still under international rules) do you have to "re-prove" you can Rx/Send morse code again and at higher speeds to get more HF frequencies to operate on?

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 08:00 UTC, 07 MAY

/\

ACTIVATION: 18:00 UTC ON 07 MAY
VALID UNTIL: 19:00 UTC ON 09 MAY

HIGH RISK PERIOD: 08 MAY (UT days)
MODERATE RISK PERIOD: 07 - 09 MAY

PREDICTED ACTIVITY INDICES: 10, 40, 25, 10 (07 MAY - 10 MAY)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE ON 08 MAY

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: MODERATE TO HIGH

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: POOR TO FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN WASHINGTON STATE TO NORTHERN IDAHO TO CENTRAL MONTANA TO
SOUTH DAKOTA TO SOUTHERN MINNESOTA TO SOUTHERN WISCONSIN TO SOUTHERN
MICHIGAN AND POSSIBLY PARTS OF NORTHERN ILLINOIS AND NORTHERN OHIO,
TO DARK-SKY SITES OF NEW YORK STATE TO POSSIBLY DARK SKY LOCATIONS OF
NEW HAMPSHIRE AND MASSACHUSETTS.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

UNITED KINGDOM TO NORTHERN EUROPE INCLUDING ALL OF NORWAY, MOST OF
SWEDEN AND MOST OF FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN
REGIONS OF AUSTRALIA (PARTICULARLY EASTERN AUSTRALIA) AND NEW ZEALAND
MAY ALSO SPOT PERIODS OF ACTIVITY.

SYNOPSIS...

There is some concern that a recent major X-class solar proton flare
that was associated with a large coronal mass ejection might impact the Earth
sometime late on 07 or early on 08 May (UTC time). Analysis of coronal
imagery suggests most of the mass from the ejection was directed well south
of the Earth. However, there were two other mass ejections at different
points on the solar disk at almost the same time as well as a spacecraft data
outage at the time of the largest coronal mass ejection associated with the

X-class flare. Taken together, these factors reduce the confidence in the analysis of coronagraph imagery and suggests a section of the disturbance may be in-transit to the Earth. The Space Environment Center and the United States Air Force believe the Earth may see an impact. However, we are a bit more skeptical and believe the mass was probably ejected mostly to the west of the Earth. Nevertheless, there is enough uncertainty to warrant this watch.

Please note that there is a scheduled period on 08 May where we will have some of our computer systems down for maintenance. If the disturbance arrives during that time, we may be unable to issue an immediate notice to our subscribers. The maintenance is required and can't be postponed. However, we will do our best to do perform these activities as quickly as possible.

This WATCH will remain active until 19:00 UTC on 09 May. It will then be updated or allowed to expire.

For realtime information regarding the status of the disturbance, and any other solar flares or terrestrial disturbances, consult: http://solar.uleth.ca/solar/www/swarm.html

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO: http://solar.uleth.ca/solar/www/auroras.html

** End of Watch **

POTENTIAL GEOMAGNETIC STORM WARNING

ISSUED: 08:30 UTC, 07 MAY

/\

(See Appended Comments for Synoptic Information)

HIGH RISK PERIOD: 08 MAY (UT days)
MODERATE RISK PERIOD: 07 - 08 MAY

POTENTIAL LOW-MIDDLE LATITUDE STORM INTENSITY: STRONG MINOR
POTENTIAL HIGH LATITUDE STORM INTENSITY: MAJOR

POTENTIAL DURATION OF GEOMAGNETIC STORM: APPROX 24 TO 36 HOURS
DURATION OF MAIN BELT OF ACTIVITY: APPROX 18 TO 24 HOURS

POTENTIAL PEAK LOW-MIDDLE LATITUDE K-INDEX VALUES: 7
POTENTIAL PEAK HIGH LATITUDE K-INDEX VALUES: 8

EXPECTED DOMINATING LOW-MIDDLE LATITUDE K-INDEX: 4 TO 5
EXPECTED DOMINATING HIGH LATITUDE K-INDEX: 5 TO 6

POTENTIAL FOR LOW LATITUDE HF DEGRADATION: LOW - MODERATE
POTENTIAL SEVERITY OF HF DEGRADATION: MINOR
EXPECTED HF PROPAGATION CONDITIONS: GOOD - FAIR

POTENTIAL FOR MIDDLE LATITUDE HF DEGRADATION: MODERATE
POTENTIAL SEVERITY OF HF DEGRADATION: STRONG MINOR
EXPECTED HF PROPAGATION CONDITIONS: FAIR TO POOR

POTENTIAL FOR HIGH LATITUDE HF DEGRADATION: MODERATE
POTENTIAL SEVERITY OF HF DEGRADATION: MAJOR
EXPECTED HF PROPAGATION CONDITIONS: POOR TO OCCAS. USELESS

POTENTIAL RISK FOR GEOSYNCHRONOUS MAGNETOPAUSE CROSSINGS: 40% PROBABLE

SUSPECTED SOURCE OF OBSERVED/EXPECTED ACTIVITY:
Possible coronal mass ejection from the last major X-class flare of 06 May.
See below. There is some question as to the confidence of this forecast.

--- ---
EST. POTENTIAL GEOMAGNETIC IMPACT EST. POTENTIAL IONOSPHERIC IMPACT
--- ---
SEVERE STORM : 10 % LOW LATITUDES : MINOR
MAJOR STORM : 20 % MIDDLE LATITUDES : STRONG MINOR

MINOR STORM : 30 % HIGH LATITUDES : MAJOR
ACTIVE OR LESS : 40 % POLAR LATITUDES : MAJOR
--- ---
PROBABLE SI ASSOCIATION : 70% ESTIMATED GLOBAL IMPACT: STRONG MINOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 50
---- ---

COMMENTS:

A major class X2/1N proton flare was observed on 06 May that was
associated with a large and fairly fast moving coronal mass ejection.
Spacecraft LASCO imagery clearly show the disturbance. However, a data
outage just prior to and shortly after the flare, combined with two
additional coronal mass ejections observed at about the same time and sensor
contamination introduced by the increased flux of energetic protons has made
it difficult to clearly determine whether or not the X-class flare associated
coronal mass ejection was directed at the Earth enough to produce an impact.
The Space Environment Center and the U.S. Air Force believe an impact will
probably be observed. However, we are a bit more skeptical and believe the
disturbance was directed almost entirely west of the Earth. If true, we
probably won't see an impact from this disturbance on 07 or 08 May as this
warning indicates might occur if the Space Environment Center and USAF
forecasts hold true.

The general rule of thumb here is to be safe rather than sorry. Hence,
although we believe the chance for an impact to be lower, the risk is high
enough to justify this warning. Caution is advised. If the disturbance does
arrive, high and some middle latitude regions could see periods of severe
geomagnetic storming again. If the disturbance does not arrive, generally
quiet to unsettled levels of geomagnetic activity will probably dominate.

** End of Warning **

: CHANGE YOUR EMAIL ADDRESS TO CWBUCKLEUNDER BECAUSE TTHAT'S WHAT YOU
: DID TECH MINUS. AND GET YOUR CHILDISH HEAD OUT OF THE INTERNET LONG
: ENOUGH TO SEE CAPS DON'T MEAN SOMEONE IS YELLING AT YOU VIRTUAL BOY.

Your right, caps lock doesn't always mean that someone is yelling.
It could also mean that they don't know any better, and are being
impolite.

Did you also look at the date my license was issued?
Boy am I impressed that you found that out (note sarcasm)
I mean, there are only like, 100 callsign servers that are
listed on the major search engines alone? Big whoop.

Ok, I don't need to prove anything to you, so you have been a ham
longer, and you've got your code speed up (or at one time did)
but that has nothing to do with what I'm talking about here.

It's obvious to me that any idiot like yourself can post irrelevent
garbage to rec.* whether they are a ham or not. If you don't like
my tech "minus" status, and think I am somewhat impaired because of
it, I'll be happy to let you know that I'm *almost* up to 13wpm, and
I have my general CSCE and I can pass the advanced tests on the web
with ease. The only trouble is, I had a previous engagement during
the testing session last night, and was unable to attend.

Well, I'm done with my rant, I just wanted to let you guys know that
you are really not appreciated here. I'm not going to contribute any
more to the off topic, lame posts.

Whatever plan is eventually aproved must keep all present hams in
their class of license until their license expires. Then they would
need to upgrade or lose their license. We would just not license new
hams into the OLD deleted class of licenses.

May I suggest?
Don't get any radio.
Get a couple kits, and/or build from scratch a receiver
and transmitter of the simplest possible kind.

Say, a Regenerative Receiver and a CW transmitter
of low power.

Then make 50 contacts using this equipment, and
when you have done so, you will be in a much better
position to evaluate the sound of any receiver and
the reports of any transmitter.

I can't say why, in the space I allowed myself, but it is so.

Good luck.

Why make any changes? There are more amateurs on HF than at any time in the history of amateur radio. Who said we needed more operators down there? Our M/HF spectrum consists of only 3.75 MHz. We surely don't need nor want all 600,000 U.S. licensees on those bands (remembering that only about half the bands are useful at any given time; can you imagine 600 kilohams crammed onto 160, 80 and 40m in the evening?). Instead, why not encourage more hams to occupy the UHF+ spectrum so we don't lose it? How about a code-free license providing privileges for 50 MHz and above? It should attract lots of tech-minded professions and help insure the continued protection of that spectrum, yes? =:o

1862. ACS Newsletter

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-07 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ircpn$drv@news.Hawaii.Edu>
Source record: 172787

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <642>
.....
>From the Editor's Desk:

Stan Harter's recent passing has led to a reorganization of our ACS Newsletter and Bulletin distribution system.

Effective this date, I will be assuming the duties of ACS Bulletin Manager. My main purpose will be to assemble and edit the weekly EMCOMM Bulletins, and to supervise their distribution.

To assist in this process, we are expanding the ACS Bulletin Team. We are recruiting for the following position:

ACS BULLETIN PACKET COORDINATOR

This volunteer position will coordinate the dissemination of the ACS EMCOMM Bulletins and Newsletters over the packet radio network. This will involve approximately 15-30 minutes of your time per week. Training is available. This position requires the use of a packet radio station on a reliable packet system. If you have an interest in this position, please contact me at larton@garlic.com

We are also asking those of you who have an interest in writing an ACS Bulletin to contact us. We wish to assemble a Bulletin Team of writers who will write a few bulletins each per year, of approximately 300 words each. We'd like to expand this to all of our Bulletin Members; you do not necessarily need to be a member of California's ACS program to participate. Hopefully you will have an interest to write a few paragraphs on your particular organization, or of a topic of interest to the group. If you have an interest in writing for our ACS Bulletin Team, please

contact me at larton@garlic.com

Stay safe, everybody -- see you next week!

WATSONVILLE ANTIQUE FLY-IN AND AIRSHOW - May 20,21,22,23, & 24

Jim Piper KD6YKL still needs more communicators for the airshow!
Volunteers in the emergency services Unit have the best seat in the house, along with the ability to meet experts in the field of aviation, receive free souvenirs, and are offered free admission and parking!

Here's a word from Jim Piper KD6YKJ:

The airshow has turned into one of the best possible ARES training exercises we have each year. It has all the necessary elements:

-- passing "real" traffic
-- passing traffic under sometimes stressful conditions
-- high ambient noise environment
-- strictly controlled traffic nets
-- sometimes arduous conditions
-- the potential to turn from 'training' into REAL (i.e., worst case, the possibility of a mass casualty incident.

The primary ARES contact for this is Bob Wiser / KD6FXQ, Watsonville EC. Please advise both of us of the e-mail addresses (if any) plus names, and telephone numbers of the volunteers from your area. Bob can be reached at:

bwiser@gregory.com
BobWiser@aol.com

His telephone number is: 728-4198

FYI: there will be a field familiarization on May 9 at 0900 at the Watsonville Airport (talk-in on 147.945-/94.8).

73 --
Jim / KD6YKL

This week's EMCOMM Bulletin:

EMC130 Changing of the Guard For release 5/4/98

Stanly E. Harter, State of California ACS/EAS Program Manager, passed away on April 2, 1998, from a massive heart attack. In the interim, the Governor's Office of Emergency Services (OES) has hired Chief ACS Officer Cary Mangum to handle Stan's responsibilities.

Cary and Stan worked closely together for seven years. Because of their similar philosophies, and due to the increased workload of the Emergency Alert System (EAS), Stan transferred Auxiliary Communications Service (ACS) program responsibilities over to Cary several years ago.

Besides assigning the ACS program to Cary, State OES has also requested him to keep EAS fully operational. Cary will maintain EAS records, documents, E-mail, and files for subsequent transfer to the new program manager, once that position is filled. That task involves detailed plans for 22 FCC Local Areas, Local Emergency Communications Committees, and the State Emergency Communications Committee.

Cary will continue to rely on the ACS staff to assist him while the transition is made to a new ACS/EAS Program Manager, a process that may take several months to complete. While the staff may be changing, the missions of ACS and EAS continue to remain the same. Asked to comment for this bulletin, he said:

"OES will assist any local California government in developing or improving an emergency communications plan. The ACS concept is an umbrella for a variety of volunteer communications organizations, and I consider it to have the greatest flexibility and potential. However, the ACS concept is not mandatory. Where there is another way to develop an approved plan with the local government and have a successful program, we will assist in whatever way possible. OES supports most existing plans that function effectively for the government and allow outside resources to be utilized.

The Governor's Office of Emergency Services commends the efforts of the hundreds of volunteers statewide who have made their various emergency communications programs so very successful. We will continue to provide the EMCOMM Bulletins, the ACS Web page, and an active ACS program to offer assistance to those jurisdictions who request it. Strong and viable emergency

communications support to government is our best legacy to Stan."

For program details, contact the OES Region ACS Officer in your
area of California, or ACS Interim Program Manager, Cary Mangum

1863. Digital voice transmissions on amateur radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-07 00:00:00 UTC
From: Nick Lansley <usenet@lansley.demon.co.uk.nospam>
Message-ID: <894563974.3855.0.nnrp-01.c2de030e@news.demon.co.uk>
Source record: 172788
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.shortwave,uk.radio.amateur

Synopsis: This informal article considers the possibility of using digital techniques for voice transmission on amateur radio wavebands to overcome the disadvantages of using analogue voice over long-path narrow-bandwidth communications.

Author: Nick Lansley G1KZI

Background: Nick's interest in digital techniques for narrow-bandwidth voice transmission has been kindled by the many disadvantages he has experienced associated with analogue voice transmission, combined with many advances in digital data compression researched and deployed by companies involved with Internet telecommunications. Nick lives in Norfolk, England and is QRV on 6m, 2m and 70cm with callsign G1KZI, and his work is closely involved with the Internet as he is responsible for the technical development of home shopping for the UK national supermarket chain Tesco.
--

Introduction

I've been reading recently about how some SW radio stations and SW radio manufacturers, in order to address the slow but sure decline in SW audiences, are working to introduce digitally-encoded signals alongside (and later instead of) analogue signals in order to improve sound quality and reduce many of the effects of fading, and provide this digital service within the 5KHz audio bandwidth used by such stations.

As an HF listener interested in the plethora of digital signals (RTTY etc), and knowing well that most digitally-encoded signals can be 100% deciphered when the audio components have faded to below levels discernible by the human ear (well my human ear anyway!), I'm certainly looking forward to this development, but I
wonder if HF radio amateurs have considered looking into the use of digital voice transmission techniques.

I will confess a limit in my knowledge of both digitising techniques and the modulation of digital signals, so I ask that you accept (and correct) any gaps or assumptions that result here. I truly wish to see if any amateurs are interested in digital voice transmission. I wish as much to stimulate discussion on this topic.

Digitising techniques

I understand that digitally-encoded voice requires, in theory, much more bandwidth than analogue voice because the sampling rate has to be (at least) twice the highest frequency of the original voice signal in order to encode

both the peak and trough of the audio wave. If you take a standard sinusoidal audio tone, two or more samples are needed for each complete 360-degree wave (I say "or more" because in reality, two samples would actually recreate a square wave when converted back to analogue). In amateur radio terms, supposing the maximum voice frequency to be transmitted is up to 3KHz. This would require a sample rate of 6KHz. However, if each sample is 8-bit (allowing 256 levels of sound volume from silence to 'maximum') then we have 256 bits x 6000 samples = 1536000 digital bits to modulate onto a radio wave per second! Even if we reduce the sampling depth from 8-bit to 4-bit (just 16 levels of sound volume) then 16 x 6000 = 96000 digital bits.

Compression codecs and resulting bandwidth

Thanks to those mathematicians who try to outsmart each other's sampling rate/compression algorithms (such as Lernout & Hauspie's CELP and SBC methods, GSM (used by digital phones), MPEG (layer-3), and Microsoft's ADPCM), we can get some serious performance enhancements and actually improve on discerned speech quality for the same bandwidth than the original analogue signal.

Take a sound digitised using the Lernout & Hauspie CELP algorithm, sampling 4.8kbit/s 8,000 Hz, 16 Bit, Mono (available on most Win95/NT computers if you have installed Microsoft NetMeeting or other Internet Phone package). This algorithm compresses the sample to an actual data transfer rate of 5KBit/second (source: Start Microsoft NetMeeting, select Tools - Advanced - Audio - Advanced and read bitrates for each sampling codec). If you could drive the transmitter directly much like CW where ON is digital 1 and OFF is digital 0 then I understand that the bandwidth would match the bitrate (5KHz bandwidth for 5Kbit bitrate/second). Using the two-tone technique used by RTTY and packet, extra bandwidth overhead would be required to properly accommodate the two tones.

5KHz bandwidth is a bit excessive, but a reduction in the audio sampling rate so that the maximum recordable frequency is 4KHz not 8KHz, and bit-depth set to 8-bit (256 volume levels) not 16-bit (65535 volume levels) then surely the bandwidth could be halved, fitting the modulated digital signal usefully within an accepted bandwidth of 2 - 3 KHz.

Perceived advantages of digital voice

I perceive that there are several specific advantages to digital voice transmissions over analogue:
1) Digital signals often can be detected and decoded at a level below that discernible by the human ear (well, my human ear anyway). This means communication may well be achievable and reliable over even the most difficult paths where analogue speech fails.
2) Digital voice signals would not suffer from background noise - it's either there or it's not!
3) A two-tone based transmission would mean that many signals could be on top of each other (e.g. pile-up conditions) but only the signal with the two

tones received at the right two frequencies would be decoded. For "CW" (for want of a better phrase)-style transmissions, the signal received at the 'correct' frequency tone would be discerned.

Challenges for amateur radio
---
1) The same encoding and decoding techniques would need to be deployed at each station involved in a QSO. This would require the adoption of one or more digital codec standards.
2) An allowed bandwidth for digital voice would need to be agreed voluntarily and not exceeded, just as it is today for SSB analogue voice.
3) Compression techniques may cause dynamically variable bandwidth as some sounds are bound to compress better than others.
4) Some digital methods use a "don't care if part of the signal is missing" and decode as best they can with digital distortive results. Others use correction methods (built into transmission, or receiver requests re-send) which can cause a rapid drop in digital throughput). Which is best?
5) Where in the bandplan would digital voice be voluntarily permitted?

Conclusions

I believe that digital voice would be an interesting and challenging new mode for radio amateurs to adopt. It would require a coherent international effort for useful standards to be created, although as in other aspects of amateur radio, a society of like-minded digital voice enthusiasts could be formed to create initial interest. After all, there's nothing like a "new sound" on the amateur radio bands to raise inquisitive heads!

>John W2FS (ex-WA0PTV)

If so, this would be kind of ironic, since (if I remember my radio history correctly) HF was originally given to amateurs because it was deemed worthless. :)

> repeater and simplex use.
SNIP

OK,,, but this really does not mean much. We need to know how clean
the
signal was! In other words, if that 1 watt was all on the intended
frequency
then COOL! But if that one watt a partially on the intended freq &
partially on one or more other freqs then that is NO GOOD.

The only way to check that is with a Spectrum Analyzer, all a Bird meter
tells you is how much power you have, it tell you NOTHING about
WHERE that power is! I would really want to check that out well since
the 2nd harmonic of 220 Mhz is 440 Mhz, where that radio is going to
have a
pass filter not blocking those signals!

I was using Winpack 6.4 for packet,it had been working fine until it suddenly stopped.When I try to make a connection to my local BBS all I get on the screen is the letters ORT,what does it mean.The 232 is working ok,as I also use Pacratt for Windows and it works without any trouble.When trying to use Winpack now,as soon as it loads,CON-CTS-DSR-DCD,are lit red instead of,CON and DCD being Green and CTS and DSR being Red.The program goes into TX mode as soon as it is loaded.Can anyone tell me why this should be only on Winpack.
I have checked and double checked everything but too no avail.
Kindest regards.

1870. WARNING: Potential Satellite Anomaly Warning Issued 07 May

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-07 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6it464$p1615@mars.online.uleth.ca>
Source record: 172795
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 19:30 UTC, 07 MAY

/\

CURRENT CONDITIONS:

Energetic electron flux levels at greater than 2 MeV are approaching
very high thresholds along the geosynchronous noon sector and are high
elsewhere. Overall fluence levels are also approaching very high levels.
Spacecraft in geosynchronous or high-inclination orbits may be susceptible to
deep-dielectric charging anomalies. This is becoming a significant charging
event.

For current realtime conditions regarding electron flux densities, consult:
http://solar.uleth.ca/solar/www/swarm.html

OUTLOOK:

Energetic electrons at greater than 2 MeV will begin to drop rapidly if
we observe the passage of the anticipated coronal mass ejection disturbance
associated with the X-class flare of 06 May. However, if we observe this
disturbance, surface charging anomalies may become the main threat, as well
as slightly increased levels of atmospheric drag and a chaotic geomagnetic
field. There is also a possibility geosynchronous spacecraft may cross the
magnetopause boundary near the satellite noon sector. If the disturbance
fails to arrive, geomagnetic activity will remain stagnant, but energetic
electrons at greater than 2 MeV may maintain their current high to very high
levels for several more days.

A current historical analysis of trends of energetic electron fluence at
greater than 2 MeV at geosynchronous altitudes follows:

ENERGETIC ELECTRON FLUENCE 60-DAY HISTORY AT GREATER THAN 2 MEV
Valid: 06 May 1998

```

NOTES: "V" = Very High Fluence, "H" = High Fluence, etc, " " = No Data, "!" = Solar rotational boundary periods from current date. Electron fluence is flux integrated over time in units of cm^-2 day^-1 sr^-1 as measured by GOES-9. Fluence values that are moderate or higher have been correlated with satellite anomalies. Sustained high to very high fluence has been correlated with serious malfunctions.

Purchasing a commerical amateur radio and putting
it on the air does not require technical skills, so testing for
technical skills should not be required to get a license. Radio
instructions tell how to operate safely and construct antennas.
Only old people who will be dead soon and people who know how to use
them already have tube equipment. Whenever the government requires a
permit or outlaws something there are those who do it anyway for the
rush. Eliminate the license eliminate the losers.

SB QST @ ARL $ARLB030
ARLB030 LMCC petition opposed

ZCZC AG30
QST de W1AW
ARRL Bulletin 30 ARLB030
From ARRL Headquarters
Newington CT May 7, 1998
To all radio amateurs

SB QST ARL ARLB030
ARLB030 LMCC petition opposed

The ARRL is organizing opposition to a new threat to the 70-cm Amateur Radio band. The Land Mobile Communications Council (LMCC) has asked the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS) on a primary basis. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis, and the 430 to 440 MHz segment is an international allocation. The 70-cm band is the second most popular of the hobby's VHF/UHF allocations, with substantial FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment.

The LMCC request, based on ''additional spectrum needs of the PMRS community,'' acknowledges Amateur Radio's use of 420 to 430 and 440 to 450 MHz, and suggests that ham radio applications can remain secondary to PMRS in those segments, but offers no explanation of how sharing could be accomplished. The LMCC says it believes the 430 to 440 MHz subband ''is more important to the amateurs for use in emerging technologies such as links with spacecraft and amateur television applications.''

The petition also suggests that equipment availability and technology resulting from an expanded PMRS presence on 70 cm would benefit hams ''pursuing such applications as compressed video television in the 430-440 MHz band.'' The LMCC concedes, however, that its ''most urgent need'' for PMRS is voice and low-speed data applications, not advanced technologies which might come later on.

The petition also notes that PMRS already uses 420 to 430 MHz in three Canadian border cities (Buffalo, Cleveland and Detroit) and a ''reduction in military use of this band is foreseen.''

The LMCC also seeks allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz as well as 85 MHz at 960 to 1215 MHz by 2010.

Comments are due on the LMCC's Petition for Rulemaking, RM-9267, by June 1. Reply comments are due by June 15.

I have a VCI Vectronics, division of Valor, Inc. model AT-100
Active Antenna amplifier. It was taken out by a EMP from a
lightning strike less than 50' from the window! A light show to
say the least.

There are three TO-92 style transistors in the section, and I
can't seem to cross reference them.

1.- A Motorola TO-92 marked as follows:

MPS
5179
M511

2.- Two transistors, TO-92 with an unknown mfr. marking that
appears to be an "N" marked as follows:

N512
J310

If anyone knows of a cross, or knows actually what devices were
used in this unit, your help is thanked. I've checked ECG, SK,
Motorola, NTE.

TIA-

I notice that most HTs have 2 meter and 70 cm bands. Are their any distinct advantages to using the 70 cm band over 2 meters? Aren't there more limitations re: range and interference with 70 cm? Why would one choose to use 70 cm.?

Brian

Besides the general attitude and style of Burt's and k1oink's posts, is there any indication that they are the same person? Burt has denied this, and maybe it is not fair to hold either one responsible for the other's ignornt rremarks without at least circumstantial evidence.

That neither one has made any positive, upbeat comments on Amateur Radio, however, is easily established as fact and not conjecture.

By the way, has anybody figured out where Drew is lurking? It would not be a great surprise to me if he were not already using another new screen name.

Much less congestion, but really went to 440 because when we put up our
repeater there were no 2M freq pairs left.

> If not, refuse the shipment.
>

Good suggestion Please explain the part about getting it before paying for it. Maybe in the great white north you can physically open the box before paying it, but here in the Good Ol US of Amerika, we have to pay first, test second. In otherworlds, I could ship you a brick, COD instead of a radio and you'd have to pay for it before finding out that you were taken

Except for the fact that in Canada, the system is the same, so maybe on PLUTO they can test first, pay rayter

But I crap for you on your comment

John:Icom's going to have to have type acceptance on the transmitter so what difference does it make?
I'm much more concerned about reciever characteristics, somthing that does not require type acceptance.

Hi there. I wouldn't exactly call these images "live", since some are anywhere from several hours to as much as 2-days old (the Big-Bear site). I prefer a visual observation with a properly filtered telescope (in my case, an H-alpha filter). The Space Environment Center has fairly current information and images (http://www.sel.noaa.gov). In any case, if I can't listen to shortwave, I can go outside to look at the sun in the daytime and the aurora at night. clear skies to you.

To all radio amateurs

SB QST ARL ARLB031
ARLB031 Hurricane exercise

The National Hurricane Center in Miami, Florida, has asked amateurs to participate in a communication preparedness exercise to kick off the 1998 hurricane season.

Amateurs are asked to check into the Hurricane Watch Net on 14.325 MHz on Sunday, May 31, 1998, between 1600 and 1800 UTC. Stations are requested to provide a real-time report of their current weather conditions, including wind speed, wind direction, and barometric pressure. Measured conditions are preferred, but estimated wind speeds will be accepted.

These reports will be forwarded to W4EHW at the National Hurricane Center. W4EHW will be on frequency. Stations do not need to continue monitoring the net once their reports have been forwarded to the National Hurricane Center.

''We look forward to talking with you on the 31st and hope that the only time that we have to do so this season is during exercises,'' said Hurricane Watch Net Manager Jerry Herman, N3BDW.

Before you spend your scarce capital or expense dollars on specialized dongle-restricted synthesis or analysis software, consider a one-time $975 investment that will obviate the need for much if not all of what you now intend to buy...

The Professional Partnership Program is a site-license providing an unprecedented level of electronic simulation and synthesis capability at virtually no cost per user. For a one-time investment of $975, the Program provides to every engineer and designer company-wide:

Nodal Circuit Analysis with True Two-Node Port Definition
Unconstrained Noise Analysis
Transmission Structure Synthesis & Analysis
Over 40 Single & Coupled Topologies
Strip (Planar) Structures
Wire Lines
Coaxial Arrangements
Waveguide (Non-TEM) Topologies
Passive Filter Synthesis
Lowpass
Highpass
Bandpass
Prototypes
Practical Reactively-Coupled Realizations
System & Receiver Design Support
Link, Terminal & Radar Analysis
System Architecture Characterization
Spurious Analysis
Transmit & Receive
Coincident & Tuned
Preselector & Output Filtering
Phase Noise Analysis
Time Domain Effects
Frequency Domain Effects

600+ Page User's Manual with Examples & References

Join the Program and you will be furnishing all of this invaluable capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information. Or, see:

INTERSTATE BALLOON TO BALLOON REPEATER LINKUP

On May 9 Bill Brown, WB8ELK, will launch a balloon in Alabama
simultaneously with the WINDTRAX balloon in Indiana. If the
idea works, signals on 2 meters originating in the upper
Midwest will be linked by 440 to the Alabama balloon, retransmitted,
and be audible over a large part of the Southeast. In any event,
barring adverse weather, balloon signals from 10 meters to
73 cm should be heard Saturday over a giant swath stretching all
the way from the Great Lakes to the Gulf of Mexico.

For specific information on this launch, check out the project websites:

http://fly.hiwaay.net/~bbrown/ WBELK

http://www.windtrax.org/ WINDTRAX with live online
GPS balloon tracking

For launch notices for all balloon events, including the above
interstate project, Canadian and European events, and the
upcoming Massachusetts HamRadiosonde launch on May 30,
please check:

Thank God there's someone in the radio community which understands that.
I usually cringe while reading packet-related ham info referring to "bauds"
when they mean bps.

>advantages to using the 70 cm band over 2 meters

range and less interference with 70 cm. You can get 35 to 50 miles on 5 watts with 70cm. On 2 meters you need 50 watts. I run a 440Mhz Repeater too for the same reason no 2 mtr freqs open. But enjoy it cause i am the only one in the whole state that is on the repeater pair that I have. Plus let's not forget that having both makes in nice when your in an area that has only 440. like I know of in Wisconsin. they all run 440 up there no 2 mtr repeaters.

This is as it says, a Motorola MPS 5179. This is the same as a 2N5179, but in a plastic package. It should still be available from Moto, for example. It's a UHF transistor.

> 2.- Two transistors, TO-92 with an unknown mfr. marking that

> J310

Sounds like an old Siliconix part number to me. J310 was a JFET, I believe. You might try a decent UHF FET to replace them.

Try www.nteinc.com for a start. Philips ECG also. If you do replace these RF parts, you may have to retune the circuits to get it to work properly. I would try replacing only what's necessary, so that there is minimum changes to the circuit.

Does anyone have a schematic of the Heathkit
IG-102 100khz to 110mhz rf generator. Mine died
after many good years. I can only guess that a tube
has gone on to better worlds. My problem is that
only one tube has ID numbers on it (12AT7) the
other tube is a 6A??A. If I can't get a schematic
can someone out there tell me what the 6 volt
tube's number is supposed to be??

Thanks

Bob,

I've really enjoyed mine for the almost 3 years I've had it! Of course, I don't "scan" around with it much, just use it to listen to various ham, public service, and FM broadcast frequencies that I favor.

Perhaps more hard-core scanner folks would have some complaints about it but so far I have nothing bad to say about the one I have. Just make sure you get an extra battery so your listening/scanning won't have to be interrupted. I leave one on charge and use up the other, then swap them out. Takes me about 3 days to do that, with it "on" about 1 to 2 hours per day.

LAND MOBILE SEEKS SHARED ACCESS TO 70 CM BAND

The ARRL is organizing opposition to a new threat to the 70-cm Amateur Radio band. The Land Mobile Communications Council (LMCC) has asked the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS) on a primary basis. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis, and the 430 to 440 MHz segment is an international allocation. The 70-cm band is the second most popular of the hobby's VHF/UHF allocations, with substantial

FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment.

The LMCC request, based on "additional spectrum needs of the PMRS community," acknowledges Amateur Radio's use of 420 to 430 and 440 to 450 MHz, and suggests that ham radio applications can remain secondary to PMRS in those segments, but offers no explanation of how sharing could be accomplished. The LMCC says it believes the 430 to 440 MHz subband "is more important to the amateurs for use in emerging technologies such as links with spacecraft and amateur television applications."

The petition also suggests that equipment availability and technology resulting from an expanded PMRS presence on 70 cm would benefit hams "pursuing such applications as compressed video television in the 430-440 MHz band." The LMCC concedes, however, that its "most urgent need" for PMRS is voice and low-speed data applications, not advanced technologies which might come later on.

The petition also notes that PMRS already uses 420 to 430 MHz in three Canadian border cities (Buffalo, Cleveland and Detroit) and a "reduction in military use of this band is foreseen."

The LMCC also seeks allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz as well as 85 MHz at 960 to 1215 MHz by 2010.

Comments are due on the LMCC's Petition for Rulemaking, RM-9267, by June 1. Reply comments are due by June 15. The FCC has not indicated if it will accept electronically filed comments in this proceeding.

SOLAR EVENTS DISRUPT RADIO SPECTRUM

Huge solar flares in late April and early May wreaked havoc on the ham bands and other radio spectrum here on Earth. But the aftereffects of the solar storms on April 30, May 2, and May 6--the first major geomagnetic storm in years--continued for several days to keep HF noise levels higher than normal and to disrupt HF skip propagation. "It has been an amazing week for solar flares and geomagnetic disturbances," said propagation reporter Tad Cook, K7VVV. "Suddenly the earth is getting bombarded by protons, and the immense solar wind just doesn't let up." (see Tad's propagation report below).

Paul Harden, NA5N, of the National Radio Astronomy Observatory in Socorro, New Mexico (pharden@aoc.nrao.edu), says several huge flares--explosions of solar mass on the sun's surface--took place, one on April 30, two on May 2, and three on May 6. As they occur, the flares emit high-energy radiation from X-rays down to HF, producing about 20 minutes of "strong, bursty static" here on Earth. But that's not the end of it.

The explosion throws heavy particles into the sun's atmosphere. Harden explains that many of these particles get trapped in the sun's magnetic field, spiraling along the flux lines and generating RF energy from about 800 MHz downward to--in this case--about 20 MHz. "This is called a Type III storm," Harden said. "The RF sweeps downward in frequency about 20 MHz per second, so if you were in a QSO, this Type III sweep would sound like a big

burst of static at regular intervals, almost like ignition noise." A Type III storm lasts about 10 to 20 minutes following a solar disturbance.

The mass of electrons and protons traveling through the sun's magnetic field produces electrical currents which, in turn, generate RF over a wide band of frequencies simultaneously. "This is called continuum radiation or a Type IV storm," Harden said. This produces the wideband noise on Earth--an elevated noise level over much of the HF spectrum. A Type IV storm persists for about an hour, Harden explained. But our troubles are not over here on Earth.

The "shock wave" of electrons and protons continues into space. "If the trajectory is right, it can smack right into Earth, triggering a geomagnetic storm." Harden says not all flares result in geomagnetic storms, however, and the ones on April 30 and May 2 were not a direct hit. This is how flares continue to make themselves known--and heard--for several days. A couple of days or so after a flare, the shock wave hits Earth's magnetic field "just like a big gust of wind," Harden said. "This causes our magnetic field to wiggle and tremble like it was a sphere of Jello." The resulting electric currents generate gobs of wideband noise. Electrons and protons traveling along the magnetic field fall inwards into the ionosphere at the poles and bunch up on the D layer. This makes it dense and difficult for radio signals to pass through to the E and F layers, shutting down skip propagation.

Harden says D-layer absorption can tend to come and go during a geomagnetic storm. "With a large solar disturbance, these electrons and protons keep getting pumped into the earth at the poles for many hours--sometimes for days--keeping this condition active," he said. While HF signals can't get through the D layer, VHF can, sometimes resulting in unusual propagation feats in that part of the spectrum. Many hams reported auroral conditions on VHF during the recent storms. Harden says that in a geomagnetic storm, the lowest usable frequency or LUF--normally about 2 MHz--can rise to 30 MHz. "That would be a blackout, which many experienced," he said.

Harden compared forecasting such solar events to predicting the stock market. It's not yet known if the shock wave from the May 6 flares will hit Earth, but the forecast was calling for major to severe storming by May 8 or 9 and potential HF blackout conditions. Harden says that with the polar caps already charged up, the May 6 events could trigger some aurora in the middle latitudes. Effects tend to linger a bit in higher latitudes.

Cook suggests the recent events are part of Nature's give and take. "We are seeing a big increase in solar activity, but with the increased sunspots comes a downside, with flares disrupting HF communications, often to the point of total blackout." To check the latest solar forecast, see http://www.sel.noaa-gov/forecast.html.

DAYTON 1998--A PREVIEW!

The world's largest Amateur Radio gathering--the Dayton Hamvention--is just days away. May 15, 16, and 17, upwards of 30,000 hams from around the world will descend upon Dayton and Hara Arena. Many go to socialize with friends they usually just get to meet on the air. Others go to attend the forums or

special-interest events--like the QRP Amateur Radio Club International's "Four Days in May" event (see http://www.qrparci.org) and the DXers dinner and the Contest Dinner (sponsored by CQ magazine). For many others, the flea market is the thing. But for manufacturers and vendors, Dayton typically is the time to debut new equipment.

Among the innovative offerings you can expect to see this year is Kenwood's VC-H1 visual communicator. Kenwood has miniaturized SSTV into a hand-held package that includes both a color camera and monitor. It's usable with any transceiver (Kenwood's ads show it being used with an FM hand-held), and it's sure to attract lots of attention at Dayton. While you're there, you can twist the knobs on Kenwood's upgraded TS-570G transceiver and its new dual-band mobile, the TM-G707A.

ICOM plans to wow the crowds with its new IC-PW1 kilowatt amp for HF and 6 meters and its new, "really small, dual-band, mini-power radio," the IC-Q7A. ICOM's new IC-2100 2-meter mobile, the T8A triband hand-held, the PCR-1000 PC radio and the new IC-746 HF plus 6-meters transceiver also will be at Dayton for a look-see.

It's expected that the long-awaited SGC-2020 compact HF transceiver will be on display at the Hamvention. SGC announced this week that they have begun to ship the SSB/CW transceiver. It's rated at 20 W output and priced at $625, including the mike. In the same vein, Patcomm plans to display a prototype of its upcoming PC-9000 compact HF plus 6-meter transceiver at the ARW booth. The PC-9000 will sell in the $800 price class, and Patcomm expects it to be available by later this year.

EleCraft will have its K2 HF 160-10 meter SSB/CW transceiver kit--designed by N6KR and WA6HHQ--on display as well (next to the Wilderness booth). This is to be a fully-synthesized, microprocessor-controlled radio with "no wires" construction. The CW-only version will sell for about $600.

Speaking of kits, those who like to roll their own might want to attend the kit building forum Friday afternoon at Hara Arena, conducted by Joe Eisenberg, WA0WRI.

At the Alinco booth, look for more small stuff. Following on the success of the little DJ-C1 and DJ-C4 single-band "credit card" transceivers for 2 meters and 70 cm respectively, Alinco plans to formally debut its new dual-band "credit-card" H-T, the DJ-C5T at Dayton. This 300-mW unit has a speaker and a rubber-ducky type antenna, plus a very attractive price tag. Look for a new 222-MHz H-T from Alinco as well.

Ten-Tec is expected to debut its new PC-based model RX-320 "black box" receiver for HF at Dayton. Also look for Ten-Tec's new Titan II, a single-enclosure, single-tube, full-legal-limit HF linear. It will be available by this fall. The commercial RX-340 DSP short-wave receiver also will be on hand.

ADI/Premier will have its new compact 5-W H-Ts for 6 meters and 222 MHz on display.

Look for the new Ameritron ATR-30 "true legal-limit tuner" for HF at around $600, the Mirage B-320G 200-W 2-meter amp that you can drive with your H-T or your mobile, and a pair of lightweight switching power supplies from MFJ. The folks from Mississippi also will have the updated MFJ-259 SWR Analyzer at Dayton. New features, same price.

Look for new antennas from Butternut and Cushcraft, among others.

Yaesu is not saying what it has in store for Dayton this year. The manufacturer typically announces its new product offerings at a gathering held for vendors on Friday evening of the Hamvention.

The ARRL will have a bit more booth space this year at Dayton. All the better to help visitors get acquainted with the newest edition of the popular TravelPlus for Repeaters CD-ROM. The updated General Class License Manual, with new exam information, will be available. Stop by as well for a demonstration of the new QST View CD-ROM--issues of your favorite ham radio journal going all the way back to 1930.

Some 300 vendors and exhibitors will be open for business indoors, and another 2700 or so are expected to set up shop in the flea market area. For more Hamvention info, see http://www.hamvention.org.

VIRGINIA'S NEW TOWER LAW ATTRACTS ATTENTION

Virginia's newly enacted Amateur Radio antenna law got some prominent ink in The Washington Post on May 4. In an article, "Virginia Hams to Reach New Heights," writer Dan Eggen describes how Virginia's new law "trumps stricter limits imposed by local governments such as Arlington County, which has limited towers to 58 feet in many residential neighborhoods." The new law, which goes into effect July 1, incorporates the essence of the limited federal preemption known as PRB-1. But it also includes the most generous regulatory limit on the height of towers installed in Virginia's rural areas--200 feet. In urban areas, the regulatory minimum is 75 feet. Eggen's article says the legislation "makes Virginia the most permissive state in the nation when it comes to Amateur Radio antennas."

Among those quoted in the article was Bob Ham, KK4IY, of Vinton. The aptly-named Ham was the individual who started the ball rolling, then kept up the momentum, to get the tower law enacted in the face of fierce opposition from local and county government lobbies. Also getting mention was ARRL General Counsel Chris Imlay, W3KD. Imlay predicted that Virginia's law will "inspire similar proposals elsewhere." ARRL SEC and Virginia State RACES officer Frank Mackey, K4EC, of Springfield, said "darn few hams" can afford to put up a 200-foot tower. "All anybody was looking for was an reasonable solution, and I think this is reasonable," he's quoted as saying.

Eggen's article includes a graphic that compares the relative heights of a typical two-story house, a lamp post, a power pole, a high-voltage electric tower and both 75-foot (urban limit) and 200-foot (rural limit) Amateur Radio towers. The 200-foot structure towers above the others. Virginia has more than 16,400 hams.

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Average sunspot numbers this week were over twice the week before. Solar flux was almost 30% higher, and the average planetary A index was more than double the previous week. The average solar flux for the previous 90 days moved from 104 to 106, and solar flux levels were above this average for six out of seven days this week, indicating an upward trend.

May 2-5 had severe geomagnetic storms, with global A indices of 56, 57, 96 and 36 and K indices as high as 9. The K index, updated every three hours, is an indication of geomagnetic stability. A single unit change in the K index represents a big jump in activity. The A index, updated daily, is based on the K index for the previous 24 hours. A small change in the K index is represented as a big change in the A index.

This past week has had extremely high levels of activity, but actually the worst day (May 4) is not near the top of the historic list of disturbed days. The worst day on record had a planetary A index of 312. That was September 18, 1941. The second worst planetary A index was 293 on November 12, 1960, and the third highest was 285 on March 13, 1989. The last time the planetary A index was 96 was on February 20, 1992, and a few months later on May 10, 1992 the Ap index shot all the way up to 193.

You can see a chart of records of geomagnetic storms since 1932 via ftp from the National Geophysical Data Center on the web at http://www.ngdc.noaa.gov, then select Solar Terrestrial Physics, then Geomagnetic Variations, then Magnetic Data and Indices, then Ap Index, then select FTP, then apstar.lst.

The direct ftp path is ftp://ftp.ngdc.gov/STP/GEOMAGNETIC_DATA/APSTAR/apstar.lst. An interesting chart that plots a correlation between sunspots and magnetic storms is on the same National Geophysical Data Center site at http://www.ngdc.gov/stp/GEOMAG/image/ap_ssn.gif.

We are seeing a big increase in solar activity, but with the increased sunspots comes a downside, with flares disrupting HF communications, often to the point of total blackout. The absorption of radio waves, rather than the hoped for reflection, has been so extreme that many HF users at first thought their radios were broken. On May 4 conditions were so bad that the author could not hear WWV in the evening on 5 or 10 MHz, only a 1000-mile path.

The predicted solar flux for May 8-10 is 120, 115, and 110, and the planetary A index for these days is forecast at 50, 25 and 15. If there are more solar flares or coronal holes, then the A index will be higher following the activity. Monitor WWV at 18 minutes after the hour, and note the K index, which is updated every three hours.

When the K index is 3 or lower, conditions should have recovered somewhat. The forecast for the next few weeks, which may be in doubt given the sudden appearance of new active regions, shows solar flux declining below 100 by May 15, then rising above 100 about five days later, above 120 by May 25, and above 130 by the end of the month. Predicted disturbed days are May 21-23.

Sunspot numbers for April 30 through May 6 were 74, 89, 110, 123, 117, 105, and 111, with a mean of 104.1. The 10.7-cm flux was 102.5, 113.4, 117, 117.4, 121.1, 133.4, and 130.1, with a mean of 119.3. The estimated planetary A indices were 12, 8, 56, 57, 96, 36, and 8, with a mean of 39.

PAUL G. HEARNE, WB2GHI, SK

An advocate for the disabled, Paul Hearne, WB2GHI, of Arlington, Virginia, died May 3. He was 48. Hearne was president of the Dole Foundation for Employment of People with Disabilities and president and CEO of the American Association of People with Disabilities. As director of the National Council on Disability from 1988 to 1989, Hearne helped to draft and press for passage of the Americans with Disabilities Act.

Hearne was among the first students to attend Long Island's Human Resource Center and the first person with a disability to graduate from Hofstra University Law School. Hearne went on to establish established the first legal services office dedicated to people with disabilities.

In the Amateur Radio world, Hearne was among those who helped to pass message traffic following the Alaska earthquake in 1964. He belonged to the Mid-Atlantic Antique Radio Club and had a substantial collection of vintage equipment. He also helped to found the Ham Radio Museum in Rockville, Maryland.

Survivors include his mother and his sister. Services were set for Friday, May 8, at Our Lady of Victory, Floral Park, New York. Donations are welcome to AAPD, 1819 H St NW, #330, Washington, DC 20006 or Osteogenesis Imperfecta Foundation, 804 W Diamond Ave, Suite 210, Gaithersburg, MD 20878.--thanks to William D. Ricker, N1VVX and Justice-for-All newsletter.

IN BRIEF:

* This weekend on the radio: The ARRL VHF/UHF Spring Sprint for 902/1296/2304 MHz (see April QST, page 102 for details), the FISTS CW Club Spring Sprint, and the Indiana, Nevada, and Oregon QSO parties are on tap this weekend, May 9-10. Just ahead: The ARRL VHF/UHF Spring Sprint for 50 MHz and the EU Spring Sprint (CW) are on deck for May 16. See May QST, page 96, for details.

* Correction: Our listing of ARRL Foundation scholarship winners (see The ARRL Letter, Vol 17, No 18) contained some incorrect information. Dawn D. Hopkins, KE6AHG, Sunnyvale, California received a General Fund Scholarship. Paul B. Driscoll, N1TBS, Medway, Massachusetts, received a FEMARA Scholarship.

* Comment deadline extended: The FCC has extended the date for comments on its proceeding to establish the Uniform Licensing System (ULS), Docket 98-20. Comments now are due May 22, and reply comments are due June 8.

* Second Annual Ham Radio Town Meeting: The Amateur Radio Newsline and Tucson Amateur Packet Radio will present the second annual Ham Radio Open Town Meeting of the Air during the Dayton Hamvention. The event will be

broadcast live over the Internet in RealAudio. The forum will be held Sunday, 10 AM to noon, at Hara Arena. Topic for the first session is "Should the current voluntary band plans be made mandatory." ARRL First Vice President Steve Mendelsohn, W2ML, will keynote the session, moderated by Jim Davis, W2JKD. Debaters will be Rich Moseson, W2VU, of CQ VHF magazine, and Greg Jones, WD5IVD, of TAPR. The second session, moderated by Newsline's Bill Pasternak, WA6ITF, is "No-Code: Life Beyond Repeaters." Dave Bell, W6AQ, will keynote the session with "An Extra Looks at the Success of No-Code." Presenters include Adam Weyhaupt, N9MEZ; Dave Booth, KC6WFS; and Ronald Ross, KE6JAB. For more information, see http://www.arnewsline.org.

* Vanity update: Two years after its most recent inception, the vanity program continues to be popular. The FCC in Gettysburg reports it received 718 applications in April, nearly 600 of them filed via the Internet. The FCC has processed vanity applications received through April 16. In the last batch, processed May 6, the FCC granted 117 new call signs. Another 128 applications landed in the work in process (WIPS) stack.

* RFX Workshop set: ARRL Lab Supervisor Ed Hare, W1RFI, will conduct a workshop at this month's SeaPac convention that defines and clarifies the FCC's new RF exposure rules and explains what's behind them and what is required of hams. The workshop is Friday, May 29, from 1 to 6 PM, at the SeaPac convention in Seaside, Oregon. Registration is $20 for ARRL members and $25 for nonmembers. This includes a course workbook and five hours of practical information. To register, send your check to Dan Miller, K3UFG, ARRL, 225 Main St, Newington, CT 06111; tel 860-594-0340 to pay by credit card. Registration deadline is May 20.

* Submittals sought for Educational Workshop Proceedings: The Proceedings of the ARRL National Educational Workshop is a compendium of articles about Amateur Radio teaching hints for educators and other educational or recruitment topics pertinent to ham radio. If you have a topic you'd like to write about, contact Jean Wolfgang, WB3IOS, ARRL, 225 Main St, Newington CT 06111; 860-594-0219; fax 860-594-0259; e-mail jwolfgang@arrl.org to get your Author's Kit. Articles up to 10 pages (approximately 2500 words) are acceptable. The deadline to submit is June 15. All authors receive a complimentary copy of the Proceedings. Copies are $16 (including shipping/handling); educators can get three of the previous years' editions for $16.

* 1998 International Microwave Symposium and Exhibition set: The IEEE International Microwave Symposium and Exhibition is June 7-12, in Baltimore, Maryland. It's sponsored by IEEE's Microwave Theory and Techniques Society (MTT-S), and more than 9000 are expected to attend. Technical activities include workshops, technical sessions, and lunch-time panels. Because of the recent surge of interest in personal communications, IMS has expanded its coverage to include subjects more traditionally of interest to amateurs. These include sessions on low-noise techniques, HF/VHF/UHF power amplifiers and ICs, filters and other passive components, RF measurements, FCC policy issues, and the International Mobile Telecommunications--2000 ITU standard. More than 300 technical papers will be presented. Nearly 400 companies will

display. Full conference advance registration starts at $165 for IEEE members. Complete information and a program schedule are available at http://estd-www.nrl.navy.mil/ims/1998ims.html. On-line registration is available at http://www.expo-intl.com/shows/mtt-s/register. All technical events of IMS '98 take place in the Baltimore Convention Center in downtown Baltimore, next to Inner Harbor.--Steven Stitzer, WA3ZWC

* Second call for papers: The 16th Annual AMSAT-NA Meeting and Space Symposium, October 16-18, Vicksburg Mississippi has issued its second call to authors who wish to present papers at the symposium and that will be printed in the Proceedings. Papers on topics of interest to the Amateur Radio satellite community are welcome. One page abstracts are due by June 1, 1998. Authors will be advised after June 15 if their papers have been accepted or not. Send abstracts to Malcolm Keown, W5XX, 14 Lake Circle Dr, Vicksburg, MS 39180; e-mail w5xx@magnolia.net. Follow up e-mail submittals to ensure delivery, or mail a hard copy. Proceedings will be printed by the ARRL and made available at and after the meeting. For more information, see http://pages.prodigy.com/DXHF93A.--Eddie Pettis, N5JGK

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body,

type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

In article <01bd7944$bbcaa980$299961cc@telenet.net.telenet.net>, "Steve Williams" <sunset@telenet.net> writes:

> Not gonna happen, If anything hams are going to lose spectrum not gain it.
>If big companies figure out there is money in it kiss them goodbye. Besides
>the fact that there is a big decline in new hams. Of course with the ARRL
>giving away anything that Uncle Sam wants them too it won't be long.

Few large companies are interested in HF anymore. With Satellites
it's easier to instead get things relayed through a satellite reliably
unless of course a meteor shower or solar flare destroys the satellite
or renders it useless. Of course, putting up a new one is always an
option. When ham radio got the WARC bands around the world, it
was a good sign that HF was no longer as useful as it once had been.
Companies instead are interested in VHF, UHF, SHF and up to do things
with and to.

Judging from your picture on QRZ you don't look too much like a spring chicken yourself. Very interesting comments for someone who is an extra class license. I don't think I will fan the fire on this one except to say there is much more to setting up a station than pluging in a radio and connecting an antenna. Public saftey and service, band plans, various modes of operation, personal saftey are all inculded along with the technical stuff. This isn't a perfect hobby but it sure is fun.

Why bother with any license, Driver, Pilot, Medical etc...

Hmmm.... I have a license and I'm definately not a loser! I'm also a law enforcement officer who frowns on people on people who do whatever they want regardless of the applicable law concerning the action involved. If that were the case we could all go to the local hardware store a buy some plutonium or other similar material. Of course, we would all know it was dangerous, but what the heck, we could buy it anyway. Also, I'm not old and don't plan on dying anytime soon. I feel that it is an honor to have passed my tests 2 years ago. Besides, one should always strive to continue to learn new things. Once you stop learning, you _are_ dead. Just my 2 cents worth, it's not meant as a flame of any type.

Um, folks.... Feel that tugging on your pantleg? C'mon, don't take this guy seriously. Obviously this guy who CALLS himself K1OIK (I have to wonder if that's who he really is) is out for yuks and is trying to take the concept of no-code licensing to an absurd extreme of no-LICENSE licensing. See? Sheesh....

Hey, don't get me wrong -- I like a good goof as much as the next guy, but I come here to catch some deals on ham goodies. It would be all right with me if the alledged K1OIK would give it a rest or take it somewhere else. In fact, I feel a little bad even giving him the time of day with this reply, but it's time I suggested that those who are put off by this guy's material just ignore it and move on. When he gets a rise out of you, he gets what he wants.

To the so-called K1OIK, one request -- It's a big Internet. Go find a flame board and have some REAL fun. Your schtick just gets in the way of what most of us come here to read.

73 anyway....

QST de W1AW
ARRL Bulletin 30 ARLB030
>From ARRL Headquarters
Newington CT May 7, 1998
To all radio amateurs

SB QST ARL ARLB030
ARLB030 LMCC petition opposed

The ARRL is organizing opposition to a new threat to the 70-cm Amateur Radio band. The Land Mobile Communications Council (LMCC) has asked the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS) on a primary basis. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis, and the 430 to 440 MHz segment is an international allocation. The 70-cm band is the second most popular of the hobby's VHF/UHF allocations, with substantial FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment.

The LMCC request, based on ''additional spectrum needs of the PMRS community,'' acknowledges Amateur Radio's use of 420 to 430 and 440 to 450 MHz, and suggests that ham radio applications can remain secondary to PMRS in those segments, but offers no explanation of how sharing could be accomplished. The LMCC says it believes the 430 to 440 MHz subband ''is more important to the amateurs for use in emerging technologies such as links with spacecraft and amateur television applications.''

The petition also suggests that equipment availability and technology resulting from an expanded PMRS presence on 70 cm would benefit hams ''pursuing such applications as compressed video television in the 430-440 MHz band.'' The LMCC concedes, however, that its ''most urgent need'' for PMRS is voice and low-speed data applications, not advanced technologies which might come later on.

The petition also notes that PMRS already uses 420 to 430 MHz in three Canadian border cities (Buffalo, Cleveland and Detroit) and a ''reduction in military use of this band is foreseen.''

The LMCC also seeks allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz as well as 85 MHz at 960 to 1215 MHz by 2010.

Comments are due on the LMCC's Petition for Rulemaking, RM-9267, by June 1. Reply comments are due by June 15.

Howdy,

I have noticed a problem with my VX-1's decode function. When there is CTCSS DECODE data programmed into a memory channel, the radio will not stop on that channel while scanning. It pauses briefly, then resumes scanning, not opening the audio. If monitoring a single channel, (not scanning), the decode works fine, its just when the radio scans that the problem occurs.

I am wondering if other amateurs who own VX-1s are encountering the same problem. Yaesu has said this is a problem with all VX-1s, but I have my doubts. I would appreciate feedback from anyone who is having or is not having this problem with their VX-1.

Granted, its not that big of a problem, but I'm in an intermod proned area, so its an important feature for me.

Hello .

How wide freq.-coverage may I get on an IC-H16T (MRH 45 software , European) ?
And how do I expand the frequency-area as much as possible .

At the moment it covers from about 103 MHz to about 180 MHz TX , and from 136 MHz to 180 MHz RX (I have RX down to 103 MHz , but it don't demodulate AM) And it has 100 Channels .

If anybody know how I can change the freq-area in the "programming-mode" , please mail me instructions on what adresses I have to change , to get a wider freq-coverage . mail to : kdalsboe@online.no

Thanks in advance .

Nick

Digital Voice was pioneered in the early eighties I think. I remember an interesting article in HRT around that time. I no longer have a copy of the Article. From Memory the experiments we done on 70cms using HI-FI digital audio out of portable VHS video recorders. Don't think it was narrow band though - hence the use of 70cms

Can anybody else recollect this ?

Incidentally I'd go for a sampling rate greater than 6 kHz. Nyquist's theorem states that the MINIMUM sampling rate is two times the highest frequency to be sampled. At 6 kHz you'd get aliasing errors and you'd need a real brick wall filter to stop it.

Codecs seem a great idea what with the bountiful supplies of surplus Digital portable phones which will be hitting the Amateur Rallies in years (even months) to come. Also a log of Rigs these days are "packet ready" with 9600 bps capable digital inputs on the back/front panels.

Good luck with your experiments. I guess you could do it anywhere in the all mode section of a particular band though I think you'd need to sent a CW ident. periodically and make sure you work out the correct mode of transmission for your logbook !!!! (F1A ?)

Why don't you try getting two PC's up and running PPP across a modem link, then try netmeeting over it between them. Once this is working switch to a radio link. Should work if you can knock up some kind of phone patch for your rig (MAPLIN do them). After all the Analogue bandwidth on a phone equates to the audio bandwidth on a transceiver. You'd have to use a two dual banders though as the circuit need to be full duplex.....thinks..... I've got two dual banders, two PC's two modems..... I think I might beat you two this !!!!

ALL amateurs should have to re-validate their licence at renewal so
that we can be assured that the standards have not dropped. Amateurs who
fail to meet the standards would lose their licence. This would be
true incentive licencing.

No - without some careful pulse shaping you'd have an infinite set of
sidebands at 5kHz intervals, which means your bandwidth would be far more
than the bit rate.

>(5KHz bandwidth for 5Kbit bitrate/second).

However, you can improve on this. The bandwidth limits the *baud* rate:
the maximum number of symbols you can send per second, but not the
bit rate, since there's no requirement to send only one bit per symbol.
The relationship between bit rate and bandwidth depends on the
signal-to-noise ratio as well, via Shannon's law. With some reasonable
assumptions about the noise distribution, the maximum achievable
bit-rate is equal to the bandwidth (in Hz) multiplied by the log
(to base 2) of 1 + S/N. For a large enough S/N ratio just multiply
by the S/N in dB and divide by 3.

But to get the maximum bit-rate you need to use the entire bandwidth.
Simple on-off or two-tone keying at 5kHz won't do this - you need
carefully-designed waveforms to encode more than one bit in each
symbol, and you then need to be able to distinguish the symbols
at the receiving end, which is why the S/N ratio is relevant.

There are more subtle forms of "noise", too - at HF, ionospheric
effects can distort the signal, and in practice you would be doing
well to get 2400bps over a 3 kHz channel. At VHF you could manage
more.

> Using the two-tone technique used by
> RTTY and packet, extra bandwidth overhead would be required to properly

> bit-depth set to 8-bit (256 volume levels) not 16-bit (65535 volume levels)
> then surely the bandwidth could be halved,

which is exactly the method used in the present telephone system 8 kHz
sample rate times 7 or 8 bits, giving 56 or 64 kbps. *If* you can
compress that down to 2400 bps you would be in business.

Yes, but remember there's a tradeoff between S/N ratio and bit rate.

> 2) Digital voice signals would not suffer from background noise - it's
> either there or it's not!

Each bit is either right or wrong, and without error-correcting codes
you have no certainty about this, so there will still be noise, just
of a different kind.

> 3) A two-tone based transmission would mean that many signals could be on
> top of each other (e.g. pile-up conditions) but only the signal with the two
> tones received at the right two frequencies would be decoded.

Unfortunately not so if you're using the bandwidth to maximum advantage,
filling it with coded symbols. On the other hand, with a regularly-
clocked waveform there might be scope for synchronous detection
techniques.

Hello and thanks for reading this message

The name here is Doug. I live in Walkerton in mid western Ontario. My Son lives in Toronto very near the VE3ULR hub. I can connect to Shelburn witch is in the ulr linking system. My problem arises with getting the linking codes. My son has sent his membership in to ULR they have cashed the cheque over a month ago but we have not received anything back form them. My son has written them emails but has had no response.
I was wondering if someone could help us. A contact person, any suggestion, what ever. I don't always have time to watch this news group so would you please email me at dberry@wcl.on.ca

Thank in advance for your help 73's Doug VA3DMB

I've been keeping a collection of my reactions to your posts over the years. Every time you post something, I add a line to it. Since I have a life, I can't afford to spend so much time posting to usenet like you do. But here it is.

You swine. You vulgar little maggot. You worthless bag of filth. As we say in Texas, I'll bet you couldn't pour piss out of a boot with instructions on the heel. You are a canker. A sore that won't go away. I would rather kiss a lawyer than be seen with you.

You're a putrescent mass, a walking vomit. You are a spineless little worm deserving nothing but the profoundest contempt. You are a jerk, a cad, a weasel. Your life is a monument to stupidity. You are a stench, a revulsion, a big suck on a sour lemon.

You are a bleating foal, a curdled staggering mutant dwarf smeared richly with the effluvia and offal accompanying your alleged birth into this world. An insensate, blinking calf, meaningful to nobody, abandoned by the puke-drooling, giggling beasts who sired you and then killed themselves in recognition of what they had done.

You are a bleating foal, a curdled staggering mutant dwarf smeared richly with the effluvia and offal accompanying your alleged birth into this world. An insensate, blinking calf, meaningful to nobody, abandoned by the puke-drooling, giggling beasts who sired you and then killed themselves in recognition of what they had done.

Try to edit your responses of unnecessary material before attempting to impress us with your insight. The evidence that you are a nincompoop will still be available to readers, but they will be able to access it more rapidly.

You snail-skulled little rabbit. Would that a hawk pick you up, drive its beak into your brain, and upon finding it rancid set you loose to fly briefly before spattering the ocean rocks with the frothy pink shame of your ignoble blood. May you choke on the queasy, convulsing nausea of your own trite, foolish beliefs.

You are weary, stale, flat and unprofitable. You are grimy, squalid, nasty and profane. You are foul and disgusting. You're a fool, an

ignoramus. Monkeys look down on you. Even sheep won't have sex with you. You are unreservedly pathetic, starved for attention, and lost in a land that reality forgot.

And what meaning do you expect your delusionally self-important statements of unknowing, inexperienced opinion to have with us? What fantasy do you hold that you would believe that your tiny-fisted tantrums would have more weight than that of a leprous desert rat, spinning rabidly in a circle, waiting for the bite of the snake?

You are a waste of flesh. You have no rhythm. You are ridiculous and obnoxious. You are the moral equivalent of a leech. You are a living emptiness, a meaningless void. You are sour and senile. You are a disease, you puerile, one-handed, slack-jawed, drooling, meatslapper.

On a good day you're a half-wit. You remind me of drool. You are deficient in all that lends character. You have the personality of wallpaper. You are dank and filthy. You are asinine and benighted. You are the source of all unpleasantness. You spread misery and sorrow wherever you go.

You grotty wanking oik artless base-court apple-john. You clouted boggish foot-licking twit. You dankish clack-dish plonker. You gormless crook-pated tosser. You churlish boil-brained clotpole ponce.

You cockered bum-bailey poofter. You craven dewberry pisshead cockup pratting naff. You gob-kissing gleeking flap-mouthed coxcomb. You dread-bolted fobbing beef-witted clapper-clawed flirt-gill.

You are a fiend and a coward, and you have bad breath. You are degenerate, noxious and depraved. I feel debased just for knowing you exist. I despise everything about you, and I wish you would go away.

I cannot believe how incredibly stupid you are. I mean rock-hard stupid. Dehydrated-rock-hard stupid. Stupid, so stupid it goes way beyond the stupid we know into a whole different dimension of stupid. You are trans-stupid stupid. Meta-stupid. Stupid collapsed on itself so far that even the neutrons have collapsed. Stupid gotten so dense that no intellect can escape. Singularity stupid. Blazing hot mid-day sun on Mercury stupid. You emit more stupid in one second than our entire galaxy emits in a year. Quasar stupid. Your writing has to be a troll. Nothing in our universe can really be this stupid. Perhaps this is some primordial fragment from the original big bang of stupid. Some pure essence of a stupid so uncontaminated by anything else as to be beyond the laws of physics that we know.

I'm sorry. I can't go on. This is an epiphany of stupid for me. After this, you may not hear from me again for a while. I don't have enough strength left to deride your ignorant questions and half baked comments about unimportant trivia, or any of the rest of this drivel. Duh.

The only thing worse than your logic is your manners. I have snipped away most of what you wrote, because, well... it didn't really say anything. Your attempt at constructing a creative flame was pitiful. I mean, really, stringing together a bunch of insults among a load of babbling was hardly effective... Maybe later in life, after you have learned to read, write, spell, and count, you will have more success. True, these are rudimentary skills that many of us "normal" people take for granted that everyone has an easy time of mastering. But we sometimes forget that there are "challenged" persons in this world who find these things more difficult. If I had known, that this was your case then I would have never read your post. It just wouldn't have been "right". Sort of like parking in a handicap space. I wish you the best of luck in the emotional, and social struggles that seem to be placing such a demand on you.

From Tad Cook, K7VVV
Seattle, WA May 8, 1998
To all radio amateurs

SB PROP ARL ARLP019
ARLP019 Propagation de K7VVV

It has been an amazing week for solar flares and geomagnetic disturbances. Suddenly the earth is being bombarded by protons, and the intense solar wind just doesn't let up. Average sunspot numbers this week were over twice the week before, solar flux was almost 30%, and the average planetary A index was more than double the previous week. The average solar flux for the previous 90 days went from 104 to 106, and solar flux levels were above this average for six out of seven days this week, indicating an upward trend.

May 2-5 had severe geomagnetic storms, with global A indices of 56, 57, 96 and 36 and K indices as high as 9. The K index is updated every three hours, and is an indication of geomagnetic stability. A single unit change in the K index represents a big jump in activity. The A index is updated daily, and is based on the K index for the previous 24 hours. A small change in the K index is represented as a big change in the A index.

This past week has had extremely high levels of activity, but actually the worst day (May 4) is not near the top of the historic list of disturbed days.

The worst day on record had a planetary A index of 312. That was September 18, 1941. The second worst planetary A index was 293 on November 12, 1960, and the third highest was 285 on March 13, 1989. The last time the planetary A index was 96 was on February 20, 1992, and a few months later on May 10, 1992 the Ap index shot all the way up to 193. You can see a chart of records of geomagnetic storms since 1932 via ftp from the National Geophysical Data Center on the web at http://www.ngdc.noaa.gov, then select Solar Terrestrial Physics, then Geomagnetic Variations, then Magnetic Data and Indices, then Ap Index, then select FTP, then apstar.lst.

The direct ftp path via your web browser can be found at ftp://ftp.ngdc.gov/STP/GEOMAGNETIC_DATA/APSTAR/apstar.lst. An interesting chart that plots a correlation between sunspots and magnetic storms is on the same National Geophysical Data Center site at http://www.ngdc.gov/stp/GEOMAG/image/ap_ssn.gif.

We are seeing a big increase in solar activity, but with the increased sunspots comes a downside, with flares disrupting HF communications, often to the point of total blackout. The absorption of radio waves, rather than the hoped for reflection, has been so extreme that many HF users at first thought their radios were broken. On May 4 conditions were so bad that the author could not hear WWV in the evening on 5 or 10 MHz, only a 1,000 mile path.

The predicted solar flux for May 8-10 is 120, 115, and 110, and the planetary A index for these days is forecast at 50, 25 and 15. If there are more solar flares or coronal holes, then the A index will be higher following the activity. Monitor WWV at 18 minutes after the hour, and note the K index, which is updated every three hours.

When the K index is 3 or lower, conditions should have recovered somewhat. The forecast for the next few weeks, which may be in doubt given the sudden appearance of new active regions, shows solar flux declining below 100 by May 15, then rising above 100 about five days later, above 120 by May 25, and above 130 by the end of the month. Predicted disturbed days are May 21-23.

Sunspot Numbers for April 30 through May 6 were 74, 89, 110, 123, 117, 105 and 111 with a mean of 104.1. 10.7 cm flux was 102.5, 113.4, 117, 117.4, 121.1, 133.4 and 130.1, with a mean of 119.3, and estimated planetary A indices were 12, 8, 56, 57, 96, 36, and 8, with a mean of 39.

Motorola's TO-92 version of the 2N5179. You could replace it with a
standard 2N5179.

> 2.- Two transistors, TO-92 with an unknown mfr. marking that

A J310, from National Semiconductor. Second-sourced by Siliconix, amoung
others.

1939. Range extension 900MHz phone

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-08 00:00:00 UTC
From: Fornax <FornaxCluster@worldnet.att.net>
Message-ID: <6iv8gn$guq@bgtnsc03.worldnet.att.net>
Source record: 172741
Cross-posted to: uk.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.misc

I have recently acquired a 900MHz digital spread spectrum cordless phone. I would like to extend its range, without the use of linear amplifiers. Is it possible to "relay" the signal to the rooftop? What about building a 900 MHz ground plane antenna (~50 ohm) to be located on the top of the building? The antenna would be fed by means of a suitable coax-cable (50 ohm). The point that I am not sure is: what is the best way to couple the system (for max. power transfer) to the phone-base antenna (1/4 wave-length) located inside the house, without tapping directly into the high frequency output/input stage of the unit? Any suggestion?
Thank you.

N5HDQ Snipped and said:

Right on Tex and besides all that he is an anti-gun weenie.

Do you play the Texas Lotto..? If your interested I have a Texas Lotto number generator program available at my site for down loading. It is nothing fancy, just a convient way to let the computer grnerate the numbers. So far I have hit 3 of cash five on 3 occasions. It is absolutely free and I have no idea who downloads it so there will not be any follow ups with E-mail from me if you get it.

The reason I push it it is I am reminding people that just in the long shot

someone hits it with numbers from the program that old Curtis sure wants a new 3/4 Ton 4x4 with a big diesel.

Be just my luck that some asshole like Burt would hit, I can't imagine him for once acting like a decent human being.

There is also a simple antenna program that is handy if you build your own wire or vertical antennas that is download able at my site.

There is a link to the University of Texas Site for a RF Safety Level Calculater
which is easy to run and will let you see if you are in compliance with the

new rule.

I had been trying to get off the ground with a Gun Control page and asking for help. Couple days ago I finally got some and am making headway toward something worthwhile.. check my site again soon if you oppose Gun Control, especially the Brady Law.

I am in Wichita Falls.

A 68 K resistor at the grid of the first tube
your guitar connects to and another 68 K resistor
at the tube right after the volume control
should coreect your problems.

The resistors have one end connected to the grid directly.
To do that U will have to pull the grid leak R and C, and then
connect this Suppresor resitor of 68K to grid, and then
connect the grid leaks RC to the other end of the Suppresor R.

This should fix the problems.

Hmmm...this reminds me of the old Certs commercial on TV -- where two pretty girls, each with a roll of Certs in hand, tap them together to the tune of "There's two (snap!) two (snap!) two Certs in one!

We can do the same, by bashing the heads of the two Burts together, saying: "There's two (Bash!) two (Bash!) two Burts in one! Like the commercial, this should be repeated several times an hour!

Don't think so. Bit rate is bits of data (incl. start/stop/parity) per
second, baud rate is the number of transitions (level, FSK, whatever) over
the transmission medium. Generally
bit rate == baud rate nowdays.

Why don't you spend your time fixing your inferior station so that maybe we'll be able to hear you tonight on the net? Funny how all those weak little noises of a would-be jammer reach their peak strength when the beams are pointed towards Alabama.

That shows how stupid you really are puke. I have no HF station. I
sold my HF equipment when pukes like you started jamming the bands
with noise, music and comments. At least I could buy one and be on the
air in an hour as my tower is still up and an Extra class license on
my wall. Sorry puke, no tech boys allowed. By the way, how many people
with "beams'" do you know on 75 meters? What a stupid pathetic loser
and liar you are, puke boy.

Hello all

I am looking for a 2mm all mode at a reasonable price. I do not
care what brand or make it is. I would like it working in all modes.
Send me e-mail to msuhr@northlandlink.com

Thank you

I gues I should begin by saying you raised an interesting point, Carl, and so I
will reply.

Our license exams perhaps are not as challenging as they could be, and a
disturbing number of new hams promptly forget everything they crammed into
their heads after they pass the written with a score of 70 or above. We have a
lot of licensed hams that have practically no technical knowledge. Deplorable,
but it is a fact. Yes, I could have flamed the guy, or ignored him, but I
preferred to just answer the question.

Hopefully, when I ask a question that I, as an Extra Class, ought to know the
answer to, I will get help from the newsgroup and not scorn.

Is he a licensed ham? I don't know. Maybe not. But... he knows something
about electricity that he did not know before.

Message-ID: <3554F155.31958944@mindspring.com>
Source record: 172576

Fellow hams:

The AM transmission on 3945 in the evening eminates from the Deutsche Telekom station at Juelich, Germany, and is a programme of The Overcomer Ministry by Brother Stair in Walterboro (USA).

If you wish to make comments to Deutsche Telekom you may Email them at:

info@dtag.de

If you wish to contact the source of the subject content of these transmissions, contact Brother Stair at:

overcomer@lowcountry.com

I am sure both Deutsche Telekom and Brother Stair would like to receive mail from all those interested in this problem.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <645>

.....
>From the Editor's Desk:

A tentative date for the 1998 Emergency Response Institute has been set for the
third weekend in September (Sept. 19-20th). As ERI Incident Commander Ken Bourne firms up the details, we'll let you know. We're excited about bringing the
Institute to Southern California after eleven great years in the northern part of the
state. Mark your calendars!

A permanent email address has been established for questions on the Emergency Alert System (EAS): EAS_PM@oes.ca.gov Telephone: 916.262.1603 These will
remain after a new EAS Program Manager is hired by State OES. Write them down for reference.

Thanks to all the folks who sent email in response to our request for a Packet Coordinator.
We actually selected the first two of the requests submitted to us, and we'd like to welcome
aboard Robert Sanford and David Kovar to the ACS Staff. State ACS Deputy Chief (South)
Ken Bourne will provide them needed training and will have overall packet coordination
duties. Welcome Robert and David!

Remember: For those of you who change your email address, we can unsubscribe then
resubscribe you automatically via the Autoshare majordomo. Please don't send me email
requesting a manual change of address until you have followed the directions at the bottom
of every Newsletter; it only slows down the process because I have to send you the directions.
Thanks for helping.

Stay safe, everybody....see you next week! Dave Larton Newsletter Editor
.....
What's New on the Web:

Thanks to Newsletter subscriber Jim Rich for submitting this week's website:

California Blood Bank Society's Amateur Radio Net
http://spb2.spb.ca.gov/cares/cbbs.htm

This easy to navigate site has an introductory home page, and links to the organization's current roster, their activation procedures, and lists of information from and about California's blood banks. It also has links to other health - and medical-related emergency communications groups.

Don't forget to send them email at: JWRich9@aol.com
.....

This week's EMCOMM Bulletin:

EMC131 Psychological Effects of Disasters. For release 5/11/98

Disasters affect people in many ways. In some disaster situations, it may mean loss of loved ones, including relatives, friends, neighbors or family pets. In others, it means loss of home and property, furnishings, and important or cherished belongings. Sometimes it means starting over in a new home or business. The emotional effects of loss and disruption may show up immediately or may appear many months later. It is very important to understand that there is a natural grieving process following any loss, and that a disaster of any size will cause unusual and unwanted stress.

SOME INITIAL RESPONSES
Fear
Disbelief: reluctant to abandon property
Disorientation: numbing
Difficulty in making decisions
Need for information
Help-seeking for self and family
Helpfulness to other disaster victims

LATER RESPONSES
Change in appetite: digestive problems

Difficulty sleeping: headaches, anger, suspicion
Apathy and depression
Crying for "no apparent reason"
Increase in allergies, colds and flu
Domestic violence may increase
Moodiness: irritability
Anxiety about the future
Disappointment with and rejection of, outside help
Guilt over not being able to prevent the disaster
Feelings of being overwhelmed

SPECIAL EFFECTS ON YOUNG CHILDREN
Return to earlier behavior, thumb sucking, bed wetting
Clinging to parents
Reluctance to go to bed: nightmares
Crying, screaming
Withdrawal, immobility
Refusal to attend school
Fantasies that disaster never happened
Problems at School - behavior, can't concentrate.

(Above quoted from an article by this title in the Huntington Beach CERT Newsletter 11/96) ---------

While we tend to think the above relates to natural disasters affecting a community or large area, it equally applies to individual situations. For an example: A family stationed overseas by the U.S. military had both their automobiles stolen the day before Christmas. Two weeks earlier their house had been broken into and a purse stolen. Then they faced two months wait before insurance companies were willing to _discuss_ settling. Add a tax from the foreign country for $11,000 "because the vehicles were stolen and might surface on the market with the import duty not paid". (Yes, you read that right!)

Look again at the list of "responses"in the article quoted. That family experienced many of the responses as they dealt with the situation. There are many other families with experiences where they had to deal with slamming effects of extraordinary events. You probably know one in your area.

Psychological effects are a very _real_ aftermath of a traumatic experience. Yet, most of us are seldom prepared to handle, much less understand, the post-event effects. Perhaps discussing this with friends and family will be an aid in that process "just in case".

ACS Web page: http://acs.oes.ca.gov FTP archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for new bulletins and ftp.ucsd.edu/hamradio/races for earlier ones. Landline BBS: 916-262-0856 (graphical & standard interface). You can subscribe to these bulletins also. For info contact

State Chief ACS Officer Cary Mangum: Cary_Mangum@oes.ca.gov
EOM EMC131
.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

> > sound" on the amateur radio bands to raise inquisitive heads!
> >
> > Nick G1KZI
.
All the highly-technical discussion aside, a narrowband digital
audio transmission mode for HF amateur radio, using data compression
followed by other narrowband sending techniques (as in modems faster
than 3k where the bit rate exceeds the bandwidth) for reducing the
bandwidth and using error-correction to deal with the distortion
problems caused in skywave propagation is not only practical, but long
overdue. Digital technology in amateur radio is handicapped in the USA
by laws that set limits on the DATA rate of transmissions because
systems in use when the rules were written assumed that the bandwidth
always had to equal or exceed the date rate.
A digital voice mode would have two advantages to the HF amateur.
First, the digital signals transmitted and received over HF could be
readily relayed over VHF or the internet, which would be particularly
useful in disaster communication situations.
Second, whereas an AM or SSB signal of your voice will be
understood as your voice if your neighbor's TV or telephone is tuned in
on it, a digital signal would come across as anonymous noise. If your
neighbor hears your voice on his telephone, he will want to shut you off
(more because you have something he doesn't have rather than because of
any real objection to the intereference!). If the only observation made
is occassional noise, he may not even notice it, or will try to fix the
problem on his own end (which is where it must be corrected in most
cases) if he does.
Rob

-
Here is a summary of news items covered on edition #267 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 15-May:
-
1. A New Major Threat to the Amateur 420-450 MHz Allocation
2. Discovery Flight to Retreive KD5CHF Set Back Several Days
3. Shannon Lucid Mentions Amateur Radio in Magazine Article
4. RS-17 QSL Certificates Being Received by Amateurs
5. National Hurricane Exercise Seeks Amateur Participation
6. TechSat 1B Satellite to Launch on Russian Rocket in June
7. More on Accessing "The RAIN Report"
8. Special Event Station Calendar
9. Addresses to QSL May 2 Boy Scouts Special Event Stations
10. Weekly Propagation Forecast
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. AMSAT-NA Invites Amateurs to Send Their QSL Card into Orbit
13. SEDSAT-1 Set for October Launch with JPL Payload
14. "Washington Post" Article Discusses New Virginia Tower Law
15. TWIAR Goes on the Road for Dayton and Wyoming Conventions
-
Transmission and production expenses have been underwritten by a
grant from Matt Genelin, N0YNT, of New Brighton, Minnesota, where
"This Week in Amateur Radio" is heard live via satellite every
Saturday evening at 8:00 PM as part of the "Saturday Ham Talk
Net" on the WB0BWL and N0BVE repeaters serving the Twin Cities
area on 53.45, 145.21, 145.45, and 444.0 MHz. Uplink costs paid
to the W0KIE Satellite Network have been underwritten by a grant
from Mike Reed, N7ZEF, of Sinclair, Wyoming.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EDT) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up to 12.031
GHz. Program audio is on the 6.2 MHz analog subcarrier.
```

-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.twiar.org through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA; at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN; and at http://www.ionet.net/~michaelr provided by Mike Reynolds, W0KIE. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, W2XBS, at 518-283-3665 (packet @ WA2UMX.FN32AW.NY.USA.NA or email w2xbs@twiar.org) or Stephan M Anderman, K2SMA, at 518-664-6809 (packet @ N2TY.FN32DW.NY.USA.NA or email k2sma@twiar.org).

1992. correct ID for reciprocal operation in USA?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-09 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6j0v9t$ls4@groucho.cs.ubc.ca>
Source record: 172651

Canada and the USA have a reciprocal operating agreement, so hams from
one country can operate in the other without needing any additional licence.

Looking at the Canadian regulations, a US amateur whose callsign is
K7ABC would identify themselves as "K7ABC mobile VE7" or "K7ABC
portable VE7" while operating in British Columbia.

What is the correct form of identification for a Canadian amateur operating
in the USA? I haven't been able to find this in any of the ARRL books
I have, and I don't have any other ready source of the FCC rules.

Is it symmetric? Should I just use "VE7XYZ mobile K6"? And if so, how
do I know what the correct suffix is? In Canada, everyone in British
Columbia has a VE7 callsign, so there's no doubt about the correct
suffix for Americans operating here. But amateurs in Washington seem
to be a mix of K7, N7, W7, and perhaps others I haven't noticed. Which
one should I use?

Similarly, Hawaii seems to be assigned AH6, KH6, NH6, WH6. Are they
all equivalent for reciprocal operation?

Dave
(who will be visiting Hawaii soon)

From said page:
"baud (Bd): 1. A unit of modulation rate."

"In some signaling systems, non-information-carrying signals may be inserted
to facilitate synchronization; e.g., in certain forms of binary modulation
coding, there is a forced inversion of the signal state at the center of the
bit interval. In these cases, the synchronization signals are included in
the calculation of the rate in bauds but not in the computation of bit rate.
Note 2: Baud is sometimes used as a synonym for bit-per-second . This usage
is deprecated."

I think I was more or less correct, Charles. As for the relationship between
bps <> baud I'll leave that to the telecoms specialists.

For Sale, Henry 2K-2 Amplifier

I have a Henry 2K-2 floor console Amp for sale. It is in very good condition. It runs a pair of 3-400Z tubes that have full output 1400+ watts output. It works on 10 through 80 meters. Has tuned inputs. It uses forced air cooling with chimneys on each tube. It will run eater 3-400Z or 3-500Z tubes. Very clean inside and out. With book.

$600.00 Or trade for a HF Rig.

Will not ship, but would meet within 200 miles of Eureka Ca.

Hi
I've been researching getting a scanner and when asking about restoring
cellular to older scanners, I've been told : "Yes, but the
cellular works in 12.5 kHz steps, not the desired
30 kHz, so don't lick your chops or hold your breath." (3000xlt)

What does this mean, and more importantly, what scanners do the "right"
steps?

Thanks!

Bob

>
> What does this mean, and more importantly, what scanners do the "right"
> steps?

"Steps" are the frequency increments by which the
scanner searches. Supposing you set up a Search
for 868.950 - 894.000 MHz, the scanner would default
to some predefined "step". The above is the USA
cellular base band. In Europe, the increment between
"channels" is 12.5 kHz; in the USA it's 30 kHz.

Depending on the band and the scanner, "steps" are in
5, 10, 12.5, 25, 30, 50, and 100 kHz increments. Many
scanners so not offer user-selectable steps; some do.

In any event, "steps" are a Search function, not a
scan function. Depending on the band and the scanner,
you can program in a series of frequencies as little
as 2.5 kHz apart. This increment is not called a "step",
because programmed channels are a SCAN function, not
a SEARCH function. Steps are a SEARCH function, you
see, where the scanner's CPU takes control of the
increments within a band where the frequencies are
sampled for activity.

Again, most scanners do not allow the user to select
the SEARCH steps, BUT prior to 1994, GRE cellular-capable
and cellular-modifiable scanners had the desired 30 kHz
default steps for the cell bands. All scanners made by GRE
did whereas all Uniden scanners defaulted to 12.5 kHz steps.

You can see, then, where in the USA, 30 kHz steps are
"right" and 12.5 kHz steps are "wrong". A scanner stepping

in 12.5 kHz increments would take over twice the desired time to cover the cellular band as one that did 30 kHz steps. Furthermore, a 12.5 kHz stepping scanner would not hit center frequency except every 150 kHz. At every step, it would be a minimum of 5 kHz "off frequency" except at the 150 kHz markers which is evenly divided by 12.5 kHz.

A 30 kHz stepping scanner would take 5 increments to cover 150 kHz whereas a 12.5 kHz scanner would take 12 increments to cover the same range.

A list of cell-capable and cell-modifiable scanners is contained in my regularly posted SCANNER MODIFICATION FAQ, the latest version of which was posted within the last 24-48 hours, so you can refer to it for the "list".

Or, to repeat an older idea, _retest_ at license renewal time, written
and code,
or better yet, just lower the code speed requirement to 10WPM. That
way, those who want to have the higher privs can do so without any real
problem. CW really isn't needed anymore, but it is fun and it adds to
the mystique of radio operations. I would ban, however, the use of
machine generated cw, thereby eliminating the computer 'ham' who runs cw
at 100 WPM. Man, just go rtty, cw is made for manual sending!

That will be just a bit less than 10 amps at 12VDC a bit over 8 amps at 13.8VDC, and roughtly 1 amp input at 120VAC at full load. You can try operating at reduced power... my current /MM setup is a 220VAC input/10 amp 13.8VDC output power supply and a TS-50S, (at home I use the same rig and a 20A/13.8VDC out, 120V primary PS and so can run full power) and I can usually run 50 watts okay with this unit. Otherwise, go the distance and get a 20 amp power supply and not have any headaches at all. 15 amps is pretty marginal for a full power full feature rig. There is hardly any overkill factor at all with only 15A rating. Be sure to properly fuse everything if you insist on using a 15A PS.

Volts X Amps = Watts is the formula, but in dealing with XFMERS, VA or KVa is more precise. Note that there is some power dissapated as heat from the magnetizing current even with no load on the output. Figure a factor of 85 or 90% and you will be in the ballpark... higher with a switching-type power supply. To avoid all the mystery, go by the mfgr's rated output current.

I am certainly no sympathizer of the mindless one, but even I have to give him points for not concealing his identity.

The nice thing about usenet is you can keep your identity a secret, but when one is participating in arguments and flame-fests, dishing out as well as taking it, the manly thing to do is stand up and be recognized by your given name and call, if applicable. If one is not prepared to divulge his identity, then the proper thing to do is completely avoid personal attacks on others, even if they are only in retaliation.

Frankly, it has never occurred to me to look up Burt's address. I can't think of why in the world I would want to visit him just to hear in person what I read from him on the ng. But, I could if I wanted too. Burt's remarks could cost him his job someday, and were I in a supervisorial position over him, especially in his chosen field, I would unhesitantly nand unceremoniously fire him if they were brought to my attantion. In spite of the risks, he does not cower behind a screen name.

I am not condoning Burt's attitudes or his statements. But, I have to read anonymous attacks on his boorishness and hatefulness as more of the same. When others who like yourself detest k1oink do the unthinkable and rally, at least temporarily, to his defense, maybe you had better re-examine your position.

As to the safety of living on remote Cape Cod, I am sure there are other hams within a short drive capable of decking Burt if it should come to that. Geographic location does not necessarily confer security.

Show yourself, lib. And if you can't run with the big dogs, just stay on the porch and stop barking.

Then again, what better way to work up sympathy than to anonymously attack oneself in public? Burp, are you flaming yourself behind a new screen name?

This week, Drew, aka TheLibNet, posted a pro Liberty Net message about how great the Liberty Net is and how it will save America. On 03/26/98 Drew, then known as JamTheHam, stated the following which can be viewed on Dejanews:

Subject: The "Liberty Net" on 3950
From: jamtheham@aol.com (JamTheHam)
Date: 1998/03/26
Message-ID: <1998032602233200.VAAQ429@ladder01.news.aol.com>

This one's a real gem. Lots of jamming as you would expect, plus a heaping big dose of pro-Nazi and"Heil Hitler" propaganda. Oops, wait a minute: Here comesBig Al and his jamming machine!

Sounds like Drew the Spew can't make up his small mind about his support. The guy can't even get on the Libert Net as he is a Tech Plus. Poor fat pathetic Spew.

This would lead a person of reasonable intelligence to conclude that the above-mentioned are two different individuals. Present company excluded obviously. Hey Thrower, why don't you put some new tubes in that weak little rig of yours so that maybe you can play with the big dogs on 3894.5 instead of getting shot down all the time by Allison and everyone else on the frequency?

Robinson correctly answered the guy with 10 Amps at 12 Volts = 120 Watts.

However, a pertintent question is "Is this guy a licensed ham and if so,
how the hell did he ever get a license if he doesn't know the answer to
an elementary question like that???????"

2047. References for antenna & receiver basics

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-09 00:00:00 UTC
From: Michael Glaum <mglaum@cim.mcgill.ca>
Message-ID: <3554D420.FF6D5DF@cim.mcgill.ca>
Source record: 172706
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Hello,
I have a number of really basic questions regarding antennas
and radio & TV receivers. I couldn't find a FAQ that came
close to answering them. Perhaps someone could suggest a couple
of books or other sources? Here are some example questions ...

Question 1:
I have Sony Walkman. Supposedly the headphones double as the
FM antenna. When I'm working in the office or in the lab,
radio reception is very sensitive. Specifically, slight
changes in Walkman placement will result in a 100% change
in radio reception. How does such a crude antenna work?
How might I troubleshoot problems? Are there Walkmans out
there with better reception?

Question 2:
I would also like to install a nice stereo at my place.
How might one wire-up a low-cost antenna to pick up
some of the weaker signals, in the presence of EM noise and
other RF signals? Does the ARRL have a handbook on things
to keep in mind?

Question 3:

Slumming it, I live in a basement apartment. My flatmates and I
hate TV prog. so much, we refuse to pay for cable. Nevertheless
we like to catch the news so out comes the rabbit-ear antenna.
Reception is nothing short of pathetic. I was piping the antenna
signal straight into the 75ohm TV receiver but more recently
I moved it over to the coax 300ohm receiver via a balun. This
improved reception immensely. Reception on some channels is still
really bad. There is a huge (metal) hot-water heater right beside
the antenna. This setup is clearly really limited. How might I
wire up a better antenna? Indoor? Outdoor? What are some common
mistakes? How might one wire-up a low-cost antenna to pick up
some of the weaker signals, in the presence of EM noise and
other RF signals? Does the TV itself ever cause problems, e.g.
substandard receiver characteristics?

Question 4:

I have a related question which might not belong here.
My early-80's TV, pathetic as it is, allows me to tune the
receiver frequencies for each of its 13 channels. Do most
modern TV sets still provide such pre-cable low-level

support? The reason I ask is that if I'm living in the New England area and I want to pick up Canada's CBC TV, call me crazy, then I might have to tune one of the channel receiver frequencies. Perhaps this last assumption is incorrect.

I agree ... I also support retesting for technical currency at
renewal time ... though I don't think this is a majority opinion
in the ham community (which doesn't mean it can't be the right
thing for the FCC to enact ... regulatory rules should NOT be
a popularity contest amongst the encumbents.)

[more MD lies about NCI deleted in the interest of factuality]

Two reasons:

1) You spend way too much time here to be doing anything else
in your life.
2) Over the past two years you've been here, you've shown that
you are all talk, no action.

>I only work with folks I have respect for, Mike ... that definitely
>leaves you out of the equation as far as I'm concerned.

Didn't think you were.

Two hams got into a fight over NTS traffic on a local net.
The wife of one beat them to a pulp for fighting over such a stupid thing.

Burt

2057. Re: "Steps", What Are They, And Why ??

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-10 00:00:00 UTC

Bill Cheek <bcheek@san.rr.com> wrote:
: "Steps" are the frequency increments by which the
: scanner searches. Supposing you set up a Search
: for 868.950 - 894.000 MHz, the scanner would default
: to some predefined "step". The above is the USA
: cellular base band. In Europe, the increment between
: "channels" is 12.5 kHz; in the USA it's 30 kHz.

Well ...

Allmost right. :-)

In Europe *cordless* phones use 25kHz steps.

Cellular (from 890 to 960 MHz) is all digital, multiplexed
(8 connections per chanel), and scrambled! It uses 200kHz
steps.

There is another digital cellular phone system operating
between 1710 and 1880 MHz, about which I don't know the
details. But it too doesn't use 12.5kHz steps.

In some european countries there is an "older" public phone
network operating between 450 and 466 MHz that uses various
stepsizes (20/12.5/10 kHz). It's analog, but truncted and
scrambled.
Those are not *cellular* phones.

There used to be another, which used some bands within the
148 to 163 MHz range, but this one has gone outof service
a few years ago. It used 20kHz steps and communication
was in the clear.

BTW: You're not allowed to listen to any of those over here. :-(

While you seem to know a lot about how things are in the US, you
should better inform yourself, before publishing "facts" based on
guesses. ;-)

If somebody *realy* is interested, I can post (or mail) all the
details I might be able to dig out.

Regards,
Friedhelm

I have the EE but have a horrible time at learning morse. I was interested in ham radio when I was 9 (1959). But I was not licensed until 1968 (WN9WKU). I do not know what blocks me from learning the code, even learning the letters in difficult.

I have found that the MFJ code tutors seem the best for me. The flexilbity of the computer code tutors with the convenience of tapes. But I still am blocked. Can anyone (and I really need someone with great expertize) help me overcome this? I did speak with the guy who wrote the program for the ARRL. He said that individuals with faster brains needed to not start at the lower code speeds as their minds are not pushed hard enough at 5 wpm (most do better at 20).

Hummmm.
If CW is a dead, outdated mode of operation that does not need to be
used, when was the first digital/Packet/amtor/etc. contact made via
EME? As far as I know it is yet to be done by any amateur.
Seems to me that a fellow should be able to express his passionate

enjoyment and opinion about a facet of the hobby without being called names mearly because you disagree with his empasioned opinion. I don't find it a real thrill to collect stamps or read the latest best seller list novel, yet for others, its as good as it gets for them. Why bash him over it.
Oh, BTW, don't get me wrong, I think the days of REQUIRING someone to learn to send and receive code at any speed above 10WPM just to gain use of most of the HF spectrum is realy unnecessary but I do think keeping the 20 WPM requirement for the Extra is a must. WHY?
Try to operate at less than 20WPM in the bottom 20khz of 40 meters and chase DX and see how many you can copy. Or almost any of the bottom 25khz CW allocations for that matter. Most of thoes ops like to cook along at 20 or better because they enjoy that mode and they find alike minded operators there to talk too. Thats their little piece of the spectrum Pie.
If, collectivly, we don't try to make this hobby/public service grow and prosper, we will be doomed to obscurity in perhaps as few as 15 years. The constant bickering about the code, the ungentlemanly and abhorent operating practices and QRM battles that rage on in some of our HF spectrum should embarass us all. We are getting as bad as CB was in the late 70's. (My only operational time on thoes frequencies as a point of reference.)
Pulling our collective heads out of the sand, pulling together for the mutual benifit of the service, and putting this petty bickering about what we must learn to be permitted to operate in a spicific area of our total radio spectrum, demonstraiting public service, educating thoes among us who do not have the knowledge or skills and operating as a united society with ethics and respect for each other is not just a "nice pipe dream"; it is the only thing that will bring us solidly into the next century with the tools to hold on to what we all value most. Our license and the ability to communicate on frequencies solidly held by us.

Ok, now I have vented my opinion, didn't insult anyone, left myself open for both praise and ridacule, and I'll leave it there to chew over a bit.
Thanks to anyone who took the time to read this.

> However complex the message is coded, you can't get a quart
> into a pint pot!

This particular pint pot has fuzzy edges: the signal to noise ratio. If you use a symbol-to-bit ratio greater than one, you obtain multiple bits for each symbol that you can decode out of the comms channel noise. Given a good S/N, you can get very much more than a quart into the pint pot of fixed comms links bandwidth.

Eg. a 56Kbps data stream comes into your analogue modem over the standard 3.1KHz-wide PSTN channel. QED. (Hmmm, I wonder what the actual symbol rate is.)

Rich.

Michael, there is only so much one can expect from a 'moving' antenna,
especially indoors. The problem IMHO is notthe receiver but the fact
your indoors and if in University building, no doubt one filled with
lot's of steel. There are a number of variables but one neat trick you
might try is putting a small antenna outside, run the coax indoors to
another antenna on the wall, mounted inside the lab. It act's much like
a repeater, the antenna inside re-radiates the signal. There are some
antenna's for hand held cell phones that use the same concept and I've
heard it done in tunnels before to allow radio reception while
travelling through.

> Question 2:

> to keep in mind?
>

There is an ARRL antenna handbook, but a simple antenna outdoors should
do the trick. You could build a simple beam antenna for weak reception
but then your going to have to rotate it.

> Question 3:
>
> Slumming it, I live in a basement apartment. My flatmates and I

>

Again, even an inexpensive $20 antenna from Radio Shack on the roof will
drastically improve reception over Rabbit Ears indoors.

> Question 4:

> England area and I want to pick up Canada's CBC TV, call me
> crazy, then I might have to tune one of the channel receiver
> frequencies. Perhaps this last assumption is incorrect.

I did help a fellow build a 'bamboo' yagi, which is commonly called a
'beam' antenna for Channel 6 in Windsor
so he could get the hocky games he had very poor reception with a
regular TV antenna and almost static free with the 4 element beam cut
specifically for channel 6, I was quite surprized and did not expect
those results. They are on the same channel spacing as we are so you
shouldn't have to 'tune' anything. Summary: get your antenna outside and
as high as possible. There are some amplified antenna systems available
but you'll spend less and get more with an outdoor antenna.

If your not having any luck, but in need of a really good laugh, look up
Masataka Noda who attends your fine University, he's a radio amateur
with some really bizzare idea's about the way the world turns. Ask him
how to fix your antenna problem and then do the exact opposite, your
almost guaranteed sucess.

Robert,
There is a channel 2 in my locale and many hams here (Los Angeles) including myself use 6M without complaints from our neighbors. However, most folks here have cable or satellite making interference from signals at the antenna less likely. You may wish to locate a local club, go to a meeting or two to find some 6M operators and ask them about your local situation and any of their direct experiences. Judging from the entries in my logbook you should have no problems finding hams active on 6M in your neck of the woods. Though my 'gut feel' is that you will have no problems.

Hope this helps,
73,
Howard KE6MAK

2077. 6 Meter Activation of Grid DM37

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-10 00:00:00 UTC
From: hmk~~arse#@earthlink.net
Message-ID: <35553d2d.15069751@news.earthlink.net>
Source record: 172590

To All:
For those of you who would like to add DM37 to your logbooks on 6 meters, I will be operating a portable station in that grid during the Memorial Day holiday weekend. If possible, I will also activate DM36 on Friday May 23 or Tuesday May 26 during the drive to and from DM37.

Nothing fancy for an antenna, just a halo atop a 10' mast. The station will be powered by a deep cycle battery that is charged by a PV (photo-voltaic, otherwise known as solar cell) panel. I will split my time calling/monitoring between 50.125 and 50.200 and will be using USB. From an operating standpoint I will be in a great place: less than 10 neighbors in a 2 mile stretch and no TV sets, about 4 miles from nearest power lines and at an elevation of over 5000'. My goal is to have fun and give this grid to as many of you as possible. All confirmed contacts will receive a 'limited edition QSL card' and my gratitude for helping to make my few days away from work more fun.

73,
Howard KE6MAK

>.
.
Oddly enough, you may have no trouble if you are CLOSE to the
KPRC-TV transmitter site (I think in or near Missouri City, but I'm not
sure). If your neighbors are getting a strong signal from KPRC, your 6m
signal is not likely to be a problem, but if KPRC is weak, even a low
power 6m signal could blow them out.
Other notes: SSB tends to produce less TVI than AM, FM or CW.
You are less likely to cause TVI if you stay to the bottom of the
band, away from ch 2 TV.
When 6 meters is up with sporadic-E, your neighbors may be getting
interference whether your on or not - all those other TV 2 stations
900-1200 miles from Houston (WJBK, WBBM, KWGN, WPBT....) will be coming
in by skip, too!
Since KPRC is an NBC affiliate, avoid using 6m next Thursday
evening :-)

2085. Re: Digital voice transmissions on amateur radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-10 00:00:00 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <01bd7c56$fd260180$LocalHost@default>
Source record: 172598
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.shortwave,uk.radio.amateur

The useable bandwidth of the telephone line between my modem and the digital telephone exchange is more than enough to carry a TV picture. Certainly not limited to audio frequencies.

Once inside the exchange, traffic is offered time slots in an extremely wide bandwidth, not a bandwidth slot for the whole of the time a call is in progress.

But read C.E.Shannon's classic paper on "Communication in the Presence of Noise". Bell Telephone Monograph B.1644. Shannon says that even with ideal coding (which takes an indefinitely long time to perform even if you know how to do it and the coder has to wait till the whole message has been received before it can begin to code it) the transmission rate cannot exceed :-

MaxRate = B*Ln(1+ P/N) bits per second

where B is Bandwidth in cycles
P is signal power and N is noise power
and logs are to the base 2

Using common Logs :-

MaxRate = 3.322*B*Log(1+P/N) bits per second.

With P = N, Maxrate = Bandwidth.

With P/N = 10, Maxrate is only 3.5 times bandwidth and there is a limit to the useable amount of power.

In practice, actual rates fall considerably short of this ideal.

And you can't cook the books by using error-correcting codes because the amount of lost information which is recovered is very nicely balanced by the extra time required to recover it. Again, in practice, more is lost on the swings than is gained on the roundabouts. Either the error rate increases or it takes longer to send the message or the bandwidth must be increased.

Okay - has anybody said this before?

What aptitudes do excellent cw operators have that other people do not? I have heard that people with MUSICAL aptitude can be good cw ops

Back in the days before electronic keyers everybody had their own distinct sending style. Many hams still had homemade gear so the signals usually sounded different as well. It was not difficult to pick out a cw station from the eastern block, for instance.. They were generally good operators with horrible raspy sounding signals.

If you were really into cw it was possible to tell if a cw operator was from stateside or DX just by the way they were sending. In some cases you could guess the actual country.

For me, it was cw that came easy. It was the technical gibberish that I had trouble with. But I wanted the ticket so bad I just memorized everything.

We've been licensed 39 years. I think I'm a pretty good cw op. We can do all kinds of sophisticated antenna work. My station is well constructed. But as far as resistors, capacitors, power supplies, logic boards and everything else goes - forget it. It ain't in the cards.

Because Robinson had already answered it correctly when I first
saw the thread ...

> MD
>
> (the answer to your question is you have nobody but you and your
> buddies at No-Code, No-Theory, No-Effort International to thank for
> turning amateur radio into a Family Radio Service.)

Give it a rest, Mike ... the guy has been licensed since 1952 ...
when you had to take a "Real Test" at the FCC office ... and the
QRZ database says he's an "Advanced" ... yeah, right ... that
REALLY goes to show how much "better" the old tests were ...

On your final comments ...

You know DAMNED WELL that I favor more rigorous theory testing.
You lie about the goals and views of NCI in this post, then in
other posts you rail on and on about how "theory testing is
totally unnecessary."

You're a two-faced troll Mike ... nothing more.

2093. WTB: SM / schem for Uniden UHF FMU-250K

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-10 00:00:00 UTC
From: Michael <me_hamman@yahoo.com>
Message-ID: <3555e238.0@news.snip.net>
Source record: 172606
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I'm looking to buy a copy of the service manual for the
UHF Uniden FMU-250K radio. I had talked to someone
who was checking the cost of getting Kinkos to copy it
but I lost his address. I'm back at square one. At minimum
I'd like to get the schematic so I might tweak up the TX
path for 440 mhz.

Thanks
Michael

** Replace "gateheap" with "g8eap" to respond by E-Mail**

BURY RADIO SOCIETY - LECTURE PROGRAMME 1998

The Bury Radio Society is pleased to announce its Lecture Programme for the remainder of 1998 as follows:-

12th May - "RSGB Update" Linda Jopson G6QA (Regional Representative

9th June - "The CIA and RFE/Radio Liberty" Gordon Adams G3LEQ

14th July - Pedestrian Excursion with Radios

11th August - Vehicle Outing with Radios

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

The Lectures in May and June will commence at 8.00 pm but why not come along a little bit earlier and enjoy the Informal Gathering of Members from about 7.45 pm.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

The bandwidth does not limit the baud rate. It is quite possible to force
a 9600 baud signal through a 1200Hz bandwidth for example. The result
of doing so is substantial intersymbol interfence, but this does not stop
you recovering the signal accurately.

>The relationship between bit rate and bandwidth depends on the

>by the S/N in dB and divide by 3.

Agreed. What I am saying above is not contradicting this.

>Only on the DTE side, most modern modems transmit at 2400 baud on the DCE
>side, even 56K bit per second.>

(I assume you mean line side when you refer to DCE side)

Only older modems use 2400 baud. e.g. V29 or V32bis.

V34 modems use a variable baud rate from 2400 up to 3429 depending
on the speed they are running. The 56k (V90 now) modems operate at
8000 baud in the 56k direction. The basic signalling element is an 8 bit
pcm sample from the 64k digital stream used by the telephone company.

All this really does is make a case of periodic retesting, a concept
I wholeheartedly support if it can be implemented correctly to work.

>You know DAMNED WELL that I favor more rigorous theory testing.

No, you pay lip service to CLAIMING you support this position, but I've
never seen any concrete proposal from you to actually implement it.

>You lie about the goals and views of NCI in this post, then in
>other posts you rail on and on about how "theory testing is
>totally unnecessary."

Using No-Code, No-Theory, No-Effort International's logical constructs
for elimination of the code examination, theory ISN'T necessary. That
doesn't conform to my own personal beliefs, however. I've
publically stated numerous times that I think theory testing needs to
be modified -- two of my more popular positions have been mode-based
testing and implementation of an SAT-like testing structure.

How about you, Carl? Are you willing to stop the condescending insults
and work with others to formulate a solid plan to beef up theory
examinations?

Does anybody have a Rohn BX-48 Tower?

I just purchased a used one. The prevoius owner did not have a manual or instructions. I need to know how much concrete to use in the base, guying specs, etc. If anyone would be willing to copy their manual, I'd apreciate it.

Thanks in advance,
Bob

>
>

With the right software, the soundblaster IS an FSK demodulator and also an AFSK modulator. That is with the card installed. I have not heard of using a sound card to build an external modem for the serial port.

You can make a simple interface with only one active component that will work with some programs, such as JVFAX, HAMCOMM, and various other programs for CW, FAX, SSTV, RTTY, AMTOR, etc. The only active device in this circuit, for recieve-only, is an IC OP-amp. You can build it entirely from Rat Shack parts. The drawback is it seems to not work so well with Pentiums... was FB with 386 and 486 machines. For transmit, an additional active component, an NPN transistor such as 2N2222A is used for keying PTT. See
http://www.accessone.com/~tmayhan/
for downloding HAMCOMM and info on the HAMCOMM circuit, as it is commonly called.

http://www.ej1bbs.demon.nl/eng/software.html
http://www.muenster.de/~welp/sb.htm
http://www.mv.com/ipusers/wd1v/
http://www.contesting.com/writelog/Downloads/rt95_806C.EXE
are some sites to check out for soundblster programs.

Hope this helps. Also hope it got posted right... aol flash session refused to post it so had to use the online newsreader, which doesn't have an option to display anything I already read off-line. Looks like material for another post to alt.aol.sucks! oh well....

SB DX @ WW $OPDX.356
Ohio/Penn DX Bulletin No. 356

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 356
BID: $OPDX.356
May 11, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1KSZ, WB2RAJ/WB2YQH & The 59(9) DXReport, NG3K, KH6BZF, N6ED, W6RGG, W6TER, K8RF, WD8MGQ, AH0W/OH2LVG, DL7VSN, EA2BUF, F6AJA & LNDX, G0PSE, IK4CIE, LA6LHA, LW8EZU, ON4CEL, PP5LL, SM0AGD, VE7TCP, VE9AA, VK1TX, VK3AJJ and ZS5BBO following DX information.

FEW NOTES FROM EDITOR, TEDD, KB8NW: Because I will be attending the Dayton HamVention, I can not guarantee that there will be a bulletin next week. If it does happen, it will probably be late Monday. Please, continue to send your information (you never know!).
THE Northern Ohio DX Association (along with WVNO Radio) will once again sponsor a Hospitality Suite at this year's Dayton Hamvention. It will be in Suite 1011 on the 10th Club Floor of the Crowne Plaza Hotel (old Stouffers) on Friday and Saturday evenings. All DXers/Contesters are welcome. Munchies and refreshments will be avaialble. Come and meet the members and friends of NODXA.
OPDX InterNet Subscribers will receive a few extra bulletins this week containing: KH6BZF Propagation Report (Part One and Two), 3B7RF Press Release, Details on the 3B7RF Log Search (by Lyndon, VE7TCP) and Hamradio Vention 1998 (Germany).

3B7, ST. BRANDON. 3B7RF is on the air. Activity should last until May 17th. Search engines are available to verify contacts at either of the following WEB sites:

http://ve7tcp.ampr.org/cgi-bin/logsearch-3b7rf
http://www.3b7-brandon.ch/

A5, BHUTAN. It was announced at last weekend's International DX Convention at Visalia that an invitation has been extended to Yasuo "Zorro" Miyazawa, JH1AJT, by the Kingdom of Bhutan to conduct a return DXpedition from that country. Zorro, who operated from Bhutan in February, 1995, has assembled a team of operators representing six countries from Asia, Europe

and the USA and New Zealand. The DXpedition is expected to occur in early 1999 with propagation being the main factor in timing. Frank Smith, AH0W/OH2LVG, states the Midway-Kure DX Foundation will actively update the DX Community with all details as this project moves forward.

CY9AA, ST. PAUL ISLAND UPDATE. Mike, VE9AA, reports that the CY9AA team would like to welcome 2 new operators to the operations:
Brian, ND3F, well-known Rover and VHF/hf contester.
Mike, N7MB, member of the Voo-Dudes contest/DXpedition group.
Mike states that they are still looking for another one or two more operators to travel with them to St. Paul Island from June 25th to July 15th for a 10 day stay during that window (probably June 25th-July 7th or so depending on unpredictable WX).

CY9RF, ST. PAUL ISLAND UPDATE. Dan, K8RF, reports the CY9 team will be using the callsign CY9RF for their upcoming DXpedition to St. Paul Island. They will be a Multi-Operator/ Multi-Transmitter entry in the CQWW WPX CW Contest May 30-31st. QSL CY9RF via K8RF. The start-up date will be on May 28th and last until June 2nd. A serious effort will be put into Topband operation, as well as 80 and 40 meters. On 160 meters, they will use an Inverted L, on 80 a full size vertical, and on 40 a pair of phased verticals. They will string some short beverages to USA and EU. On the high bands, they will use a Cushcraft A3S Tribander and a Cushcraft 3 element monobander for 10 meters. Unfortunately, one of their operators, Geoff/W0CG, has had to drop out due to work conflicts, so they are in need of another good CW operator. If you are interested, please drop Dan a line at (k8rf@fuse.net) or call Dan at (513) 232-2182.

ER9, MOLDOVA. The Secretary of ARM, Valery Metaxa, ER1DA, reports that now until May 17th, the special callsign ER9V will be active in commemoration of the Victory Day on all bands CW/SSB. QSL via ER1DA:
P.O.B. 9537 KISHINEV MD-2071 MOLDOVA EUROPE

FRENCH NEWS. French operators now have the permission to use the 1810-1830 kHz segment in a secondary status in addition to the 1830-1850 kHz segment they have been using before.

F, OISEAUX ISLAND (France). Alvaro, EA2BUF, reports he has permission to activate this French island reservation, which normally has a "NO ENTRY" policy, using the callsign F/EA2BUF/p. This island will count for the French Island Award and has a new island reference number of DIFM AT-29. Permission was granted for two days during the mornings. Alvaro is hoping for May 17th and May 24th. QSL via EA2BUF direct or REF (France-Bureau).

H75, ISLA DE VENADO (New IOTA!). Mike/AD5A, Michael/AB5EB, Buzz/N5FTR and Buzz/N5UR will activate a new IOTA from the Nicaraguan Caribbean Sea Coast South Group, little letter b. They will be on from May 22nd until May 24th, running two stations. They will be using a 5 band beam for 20, 17, 15, 12, and 10 meters, and a vertical for 80-10 meters. The focus will be on the IOTA frequencies using CW and SSB, and they will work 40 meters CW (check 7010 and 7040 kHz) after dark to try and work Europe in

their Nicaraguan evening, and then Japan at their sunrise. They hope to have the special callsign H75A, but will not receive the callsign until they arrive! Otherwise, they will operate /YN4. John, WD8MGQ, will be the PILOT STATION for the expedition. Please let John know via E-mail (wd8mgq@tir.com) of any input or suggestions for the expedition. While the expedition will not have access to E-mail, they will maintain a regular schedule with John and adjust strategies as necessary. They have to carry all their own food, water and gasoline, and the temperature will be near 100 every day unless it rains! They are hoping to put 4000 QSOs in their logs if the propagation settles down. QSL via N5FTR: Buzz Loeschman, 717 Milton, Angleton TX 77515. At this time they have no corporate sponsorship.

IA5, ELBA ISLAND (ITALY). Victor, IK4CIE, reports to us that he will be activating an island in the Tuscany Region Group (IOTA EU-028) from May 23rd through June 5th. He will be signing IA5/IK4CIE. Activity will be only CW with 100W and vertical GP on all band 80-10 meters including the WARC bands. Victor will also participate in the CQWW WPX Contest for some hours. QSLs are "OK" via bureau.

MORE IOTA NEWS FROM LNDX......
Gerard, who is now HR5/F2JD up to May 24th, will try to be active from Cayos Cochinos (IOTA NA-160) or from Roatan (IOTA NA-57) next week.

F5NBX and F5RBB will be active from Chateau d'If (IOTA EU-95) from May 22-24th. They will be active on CW and SSB.

F5HA, F5OCP, F1SDQ, F5IQC, F5LOW, F5SZA, F5SZB, F6ANA and F5RRW will use the TM0AIX call sign from Aix island (IOTA EU-32) from May 21 to 24th. They will be on 40/20/10 meters.

F5MRP and ON4ZD will be from Fort Enet (IOTA EU-32) from June 12th (around 1200z) to June 14th (around 1200z). They will be active mostly in CW.

NCDXF PRESS RELEASE. Bob Vallio, W6RGG, Vice President of NCDXF, reports that at its meeting during the International DX Convention held May 1-3rd in Visalia, CA, the Northern California DX Foundation elected Chuck Ternes, N6OJ, to the position of Director. Chuck has previously served as an Advisor to the Board of Directors. Information on the Foundation may be found at < http://www.ncdxf.org >.

PQ5/PR5, MEL ISLAND (Brazil). Operators PP5AP/Rod, PP5AVM/Luc, PP5LL/Jay, PP5YZ/John, PY2HN, PY5GB/Gab, PY5BF/Fox and PY5ZT/Wil will activate this Brazilian island in the Parana State Group May 28-31st. This island has the following reference numbers: SA-047, DIB-24, DFH(PR-01) and DFB(PR-01). Look for PR5R to be used on SSB and PQ5L on CW. Look for them to be on the IOTA frequencies, the Brazil DX Net and the 247 DX Net. QSl via PP5LL DIRECT.

QSL INFO AND NEWS.....
AX1TX QSLS. Tex, VK1TX, reports to OPDX that cards for this special

callsign, which was activate for Australia Day on January 26th (1998), have been received from the printer. Look for them to start coming out. Please QSL via the bureau or direct to: Alex (TEX) Ihasz, 27 Buckley Cct., KAMBAH A.C.T., 2902 Australia.

TXK8K QSLS. It has been reported that FK8VHN is stating one "U.S. Green Stamp" is not enough postage for a QSL from this contest station which was active during 1998 CQWW WPX SSB. QSL cards are being received with the following message: "1 $ is equivalent to 100 XPF and stamping for North America, South America and Asia is 135 XPF, and for Europe it is 155 XPF, so 1 $ is not enough for stamping."

The log of GB0SM (IOTA EU-011) which ran from April 25th to May 1st, is now accessible on the Web. It resides in the "Islands on the Web" homepage of N1HRW/Chris. To check if your call is in the log, connect to: http://islandchaser.com
Click on the "Logs" window and you will find the GB0SM log in the "On Line Logs" menu. This is an interactive web site, so just type your callsign into the box, and if you are in the log, the date, time, band and mode of the QSO will appear. It is also possible to request a QSL card via Bureau QSL while connected.

5A21PA QSLS. It was reported to OPDX that the QSL cards for the 5A21PA DXpedition arrived from the printer, and they have started to mail them out. QSL via Piesen Patrick, Koolkerkesteenweg 141, B-8000 BRUGGE, BELGIUM or via bureau to ON4APS

NEED A QSL MANAGER? Javier, LW8EZU, states that he could be the QSL Manager for any station. He states that he has plenty of time and he is responsible. He can be contacted via E-mail at: lw8ezu@cibergamo.com Or via Snail Mail at: P.O.Box 99, Zip code 6000, Junin, Buenos Aires, Argentina.

LA4GHA/P which was active from EU-79, Hareidlandet this past weekend should be QSLed via the home callsign, direct or via bureau.

XW30 QSLS. Eric, SM0AGD, reports receiving the first 4000 XW30-QSLs from the printer. All direct cards received up to now will be confirmed and should go in the mail within a couple of weeks. Thank you for your patience.

H40AA logs are now available on the following WEB page at: http://www.iglou.com/n4gn/h40aa

SPECIAL EVENT STATION. "The 59(9) DXReport" states to look for CT98ARL to be active May 22nd and 23th from "Castle Or Leira" on all HF bands plus 144 & 432 MHz. QSL via CT1EWA.

SPECIAL EVENT STATION. On Saturday, May 16th, a special event station, ZS4SOA, will be operating from the "School Of Armour" in Bloemfontein, South Africa. They will be active on all the normal DX frequencies from 0800-1400z. There will be a special QSL card, QSL is via ZS4BS.

SV9, CRETE. Dick, W1KSZ, states he is "planning a trip to SV9, along with the wine and women", he may also turn on his radio. He hopes to sign W1KSZ/SV9. He has not announced any dates, but states he plans to take an FT-890 and external tuner to use with a G5RV which exists at the rental apartment on SV9.

TM5, THE CHAUSEY ISLANDS (France). The Belgian DXPedition Committee will be heading to this French island, which is rarely activated, to take part in the next IOTA Contest on July 25-26th. The Chausey Islands have the reference numbers IOTA EU-039 and DIFM MA-004. The Belgian team will be composed of ON4LAM/Mike, ON4LCW/Maxime, ON5PV/Phil, ON5OO/Jack, ON6QR/ Fred, ON7LX/Carine, ON7PC/Pierre, ON7RN/Eric and ON7TK/Claude. Both the CW and SSB mode will be worked on the 5 bands during the contest. Listen also near the IOTA frequencies and on the WARC bands to catch them before or after the contest. The QSL Manager is ON4GO. Also, look for F/ON4LCW during the month of July to activate a lot of little islands from the Chausey archipelago which counts for the French Islands Award (DIFM). For more information, contact Fred, ON6QR, via E-mail at: on6qr@ping.be Or check out the Belgian DXPedition Committee's Web Page at: http://www.ping.be/on6qr

VK3, GABO ISLAND. Paul/VK3AJJ and Norman/VK3PGR have announced that they will be traveling to the Victoria State East Group to activate IOTA OC-196 for 4 days from August 29th to September 1st. More details will follow closer to proposed departure date.

YA, AFGHANISTAN. Europeans report working a station signing YA5MKO on 40 meters May 7th at 2033z. No others QSNs have been spotted since, but as always WFWL! Might this be EP2MKO in Afghanistan?

YO, ROMANIA. Jean, F6AJA, from the French DX Bulletin (LNDX) will be active as YO/F6AJA May 17-24th, from YO8FZ or YO8KGA station when he has free time. Also, look for him to sign YO0/F6AJA during the CQWW WPX Contest.

ZD9, TRISTAN DA CUNHA. QSL Manager Edwin, ZS5BBO, reports that Ian, ZD9IL, continues to operate daily from +/- 0900-1600z on the following frequencies +/- : 14205, 18135, 21260, 21295, 24955 and 28490 kHz (Always look slightly up or down the band). Edwin also mentions that all cards that have been received for ZD9IL up until December 5, 1997, have been processed. ZD9IL's log did go astray, but Edwin eventually did receive it. The next log scheduled to arrive from the island is at the end of July. Edwin also requests all stations to be patient and not to send second cards. You WILL get your QSL card, but you must be patient as there are not many frequent commerical services from the island. He is looking at putting Ian on a computer logging system, and this will make things a lot easier (maybe there is someone who wants to make a donation!!!). QSL cards are sent direct to: Edwin Musto (ZS5BBO), P.O.Box 211032, Bluff, South Africa 4036.

Ah.... Amateur Radio at it's BEST! NOT! You know what? You ALL (and
I'm not just pointing at K1IOK) and saying this to ALL the of the
"So-Called" Amateur Radio Operators involved in this Whole Mess, You
ALL Make me WANNA PUKE! You're ALL Grown Men, Old enough to be MY
FATHER, and you ALL are acting like a bunch of 12 Year old KIDS! and
you're supposed to be AMATEUR RADIO OPERATORS and you know what, I've
seen more MATURE CB'ers in the NG REC.RADIO.CB, then I've EVER Seen in
this damn NG, Please DO me and ALL the OTHER People in the NEWSGROUP,
GROW THE FUCK UP, PLEASE! and QUIT ACTING LIKE A BUNCH OF 2 YEAR OLD
CB'ERS!!!!!!!!!! When I got my Ham Ticket, I THOUGHT I was getting
into a HOBBY That was a BIT more Regulated, and Controlled and MAYBE,
JUST MAYBE a BIT MORE CIVILIZED! But so FAR, YOU FUCKING MORONS, AND
YOU KNOW WHO YOU ARE, WITH YOUR WEB SITES PUTTING DOWN ONE ANOTHER ALL
TO PROMOTE THE STINKING B.A.R.F. WHICH IN ALL REALITY IS TO MAKE HARB
A BIT MORE RICHER... Now, I'm not on ANYONES Side on this issue, I'm
just sick and tired of reading this STUPID BULLSHIT here on the
Internet, day in and day OUT, PLEASE, IF YOU ASSHOLES, IDIOT
MOTHERFUCKERS WANNA FIGHT, DO IT ON 75 METERS, AND KEEP IT OUT OF
THE NEWSGROUPS!!! PLEASE!!!! I HERE IN MICHIGAN, COULD GIVE A FLYING
FUCK ABOUT WHO'S FUCKING SCREWING WHO'S MOTHER ON 75 METERS OR WHO'S
THE LATEST PUBLIC ENEMY #1 ON 75 METER, I DON'T CARE AND i DON'T THINK
ANYONE ELSE DOES EITHER GUYS...

My Point?

GROW THE FUCK UP!

and act your age too!!

Looking for a used Ringo Ranger 2 or similar 2 meter base antenna for my cabin up north. Would like like something around 6 DB gain or more reasonably priced. Have a couple of 2 meter synthesized HT's that I may consider swapping one of them for the right antenna. Also have a 5 band trap vertical HF I would consider swapping. Will also purchase outright so let me know what you have via email please.

Was wondering, I have a 2.3 metre dish with a KU
band and C band lnb...
satellite receiver +scanner capable of .1 to 1950 mhz all
modes,..
I live in SE Spain... is it still possible to receive
analogue telephone conversations on
any of the geostationary satellites.?
If so... can someone please send me details...sat
positions/frequencies and setup..
This is only for educational purpose!
Thanks..Jonny.

Actually drill into the tube and directly connect. That will be the only way to guarantee a solution.

I've got to jump in with my 2 cents worth here. I'm not going to even comment on whether morse is good, bad, or indifferent; I just know that it's required if you want to work the HF bands. It's how you pay your dues.

I got my Novice ticket in 1967, and my Tech in 68. Back then the Novice was only good for a year, and was non-renewable, so if you didn't upgrade you were out of the game.

I stayed on VHF, and didn't think anymore about CW until 1977 when I was goaded into upgrading my ticket by my boss. He was a little runty guy who liked making life miserable for largish oafs like myself, and since he was Extra Class and I was a mere Tech, I never heard the end of it. So finally, I dug out the books, brushed up on rules, regs, and theory, and started working on my CW speed. At that time I didn't use the Farnsworth method, just listened to actual QSO's until I was good enough to copy 15 WPM. So I went down to the FCC, took the exams, and came out with a new Advanced ticket, which pretty well shut him up.

The point to this story is that when you have adequate incentive, whether internally generated, or some external force, you CAN master the code well enough to pass the tests.

There is a very interesting PS to this story. After earning the Advanced ticket, I inadvertently let it lapse after ten years or so. Recently the bug bit me again, and I decided to get my ticket back again. The liscensing levels had changed substantially since my time, so I decided that Tech Plus would be plenty good for me. I bought the ARRL study guide, and downloaded a copy of SuperMorse, and got to work.

Two weeks later, which was last Saturday, I went to the local VE and took exams. Not only did I get the Tech Plus, I also passed the 13 WPM code test and the General written exams to boot! The most interesting thing about all this is that I haven't listened to any CW in over ten years except for the SuperMorse sessions, about an hour in total time,

and had absolutely no trouble with 13 WPM.

The key to the quick regaining of my CW skills was that I used the Farnsworth timing, listening to the characters at 20 WPM. When I took the actual exam, it seemed so slow that I actually thought that they had made a mistake and put on the wrong tape!

The upshot of all this is that using the Farnsworth method, and starting with the character speed set at no less than 20 WPM, anyone can learn the code in a couple of months and walk in and pass the 13 WPM exam. Again, it all has to do with the degree of motivation you have.

Well, I intended to only spend 2 cents but have prattled considerably longer, so my parting advice is that if you REALLY want on HF, then nobody can stop you, not even the CW examiner.

Next stop, Extra Class!

73 to all

Ron Ricketts

paul.knight@prairiecomm.com asked:

Hi! Is there a CW-equivalent calling frequency on 6M (like 50.125 is used
for SSB)?

Thanks and 73,

Paul WD8DKY

Paul, I've seen 50.090 listed as a CW calling frequency. A time
or two, I've even heard signals in that vicinity, but never managed
to work them.

Anybody else have any info?

Dave Finley, N1IRZ

Well all I can say is that Ive had my FT-1000MP for about a year and a half.
It will load antenna's up to 5 to 1. Havent tried anything worse. As for
the Yaesu service. I had a minor problem, a 9 volt regulator went out, they
had it less than a week, and updated it to boot. What can I say.

paul.knight@prairiecomm.com contains these words:

>Hi! Is there a CW-equivalent calling frequency on 6M (like 50.125 is used
>for SSB)?
>
>Thanks and 73,
>

Try 50.090MHz, that's what is usually used over here.

Source record: 172485

On Mon, 11 May 1998 00:18:51 -0700, the message from "Clay Phillips"
<nitehawk@seasurf.net> contains these words:

>There are many reasons to work 70 cm, often the 440 band will suffer less
>interference from out side sources such at computers, telephones, pagers,
>and the like, Also 70 cm tends to work better inside buildings.
>Another reason to use 70 cm is that it IS less used so your QSO's are not
>interrupted as much and your not bothering others. 70 cm is becoming very
>popular in many areas with 440 repeaters going up all the time. 2m has
>gotten very crowded, and 70 cm has so much more bandwidth to offer. I'll
>admit that if I could only have one I'd chouse 2m but this is really not the
>case, often it is only a mater of another $50.00 to get a dual band radio,
>there even dual banders that are cheaper than some single band models. Give
>70 cm a chance, it's not a companion, it's a partnership
>73 Clay/KC7YAR
>
I use both 2M and 70CM and find the 430MHz band very useful. I'm
listening to several people calling on the FM calling frequency from
quite a good area.

On 2M I sometimes suffer from breakthrough from a pager system down
the road, which I don't get on 70CM, plus, the antenna is more
effective at 70CM than it is at 2M or 6M, so with just 5 Watts I find
I can cover a useful distance using FM.

Like any question, 'why use 70CM?' begs the question 'Why use any
band?' either because it is there, or else it's a challenge to use
different frequencies and find out their advantages/disadvantages.

Not that I would recommend this approach, but a friend of mine spent some time in prison as the result of some poor choices and learned code rather fast. This after years of trying with no success for Ham applications.

To Arms!!! No-Code Techs unite against the threat!!! Stop trying to move away from those threatened parts of spectrum -which are all above 30 mHz anyway- and press on with your assigned mission of "saving" VHF/UHF that was to be your mainstay function as hams--to populate the upper reaches of our specrum with technical genuises and thereby shield it from such incursions. Actually, you'd do well to respond in exactly this way--code free HF is years away anbd surely you don't want your presently assigned frequencies gobbled up now. And this IS happening now. Comment deadline is June 1. But... I'd bet there's no use, I'd give long odds that it's already much too late. The deal has already been done. Anytime you see a short response period assigned to a RM it's a mere formality.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 17th, 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

2131. Re: 2 m. vs. 70 cm.

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-11 00:00:00 UTC
From: Clay Phillips <nitehawk@seasurf.net>
Message-ID: <6jjhvc$flb@tcl.mtjeff.com>
Source record: 172495

There are many reasons to work 70 cm, often the 440 band will suffer less interference from out side sources such at computers, telephones, pagers, and the like, Also 70 cm tends to work better inside buildings.
Another reason to use 70 cm is that it IS less used so your QSO's are not interrupted as much and your not bothering others. 70 cm is becoming very popular in many areas with 440 repeaters going up all the time. 2m has gotten very crowded, and 70 cm has so much more bandwidth to offer. I'll admit that if I could only have one I'd chouse 2m but this is really not the case, often it is only a mater of another $50.00 to get a dual band radio, there even dual banders that are cheaper than some single band models. Give 70 cm a chance, it's not a companion, it's a partnership

don't have a cable, but you may not need one. I modified on of the
"commercial" versions of the ft23, slightly different number, the fth-2006,
to be programmed from the keyboard, making it a freely progammable ft23 with
complete 140-200 mhz tx-coverage! yaesu has the missing keys of the ft-23
keypad hidden under a peace of plastic.
Just soldering one jumper #9, and some mechanical stuff to reveal the hidden
keypad keys did the trick!
If you want more information, let me know.

2138. YAESU FT-1000MP

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-11 00:00:00 UTC
From: rj3@earthlink.nospam.net
Message-ID: <35563fdd.1132410@news.earthlink.net>
Source record: 172533

To prospective buyers...

I recently purchased a Yaesu FT-1000MP and for what it's worth.. I don't like it!! I use a half wave dipole on 40 meters center fed with a 1:1 balun and RG-8X cable..

This antenna loads perfectly well on 40, 30 and 15 meters on a Kenwood 440 AT and an Icom-706 with tuner..no problem......

The Yaesu will NOT!!!! It is extremely unforgiving to an antenna that is not almost perfect... If I am going to spend $2700.00 for a radio, I would have expected it to work at least as well as an ICOM or a KENWOOD.....

I did take it to Yaesu for a check and was told it was O.K. This radio/tuner is so fussy about antenna impedance and SWR, that a Yaesu representative even suggested a different antenna for the low end of 40, and the high end of 40 !!! <--------

Bye, Bye FT-1000MP....... N1QQ

I recently acquired a Standard Horizon Explorer II marine VHF FM
xcvr that I am going to try to modify for 2m on the local repeater.

NOW I find that those rubber covers on
the front-panel are ACTUALLY push buttons for membrane switches and
this baby looks like it is actually synthesized on several channels,
hmmmm. Uses about 5 crystals total in there. Anyone have any
experience moving these jewels or other similar radios onto the 2m
band?

The rocks are marked:

11.155
12.600
"10M15AS"
47.5166
49.1353
(These last two are in their own shielded compartment with trimmers,
varactors, a transistor and a coil/can)

Any idea what frequencies it covers NOW as-is?
Was it somehow programmable?
Anyone have any clues how to move this thing down?

If you don't know, do you have any friends who work with these kinds of things
that MIGHT know?

I do have a manual on the way, so that might help!

Regards

Bry, AF4K / G3XLQ

Your notation is contrary to standard mathematical notation.
"Ln" means "logarithm base e" to everyone in the world (where
e is Euler's constant). If your log is base two, then you
need to indicate it as such: log
2

Please set your followup-to line to just r.r.a.digital.misc.

>only the Super Tuner name. Can anyone help ?
>Thanks, bgraves@top.monad.net

I own three of these units, and I have a photo copy of the manual. It's
actually only four pages long, because these are very simple units.

To get you started, here are some basics:
The INDUCTANCE knob is arranged to the lower alphabet letters correspond to
lower frequencies.

Begin with the TRANSMITTER MATCHING and the ANTENNA MATCHING knobs in the 50%
position. Tune one and then the other alternately to get the lowest SWR.

If you want the full instructions, including schematic, freq range for the
inductor positions, the hook up for feedlines other than coaxial, etc., e-mail
me and I will give you a PO Box to send a SASE (plus one dollar to cover copies
and my assistant's time). I'll be happy to have her make a copy and send it
right back.

Yes, we can only approach the Shannon bound to within about 4 db
with current technology. But the typical telco link has considerably
better than a 10 db SNR. It is more like 40 db. The Shannon bound
is generally not the limiting factor. The limiting factor is differential
group delay. That smears the symbols into each other and limits
us to much less than the Shannon bound. Telco modems use
training sequences to compensate for this, but they are imperfect.

>minds are not pushed hard enough at 5 wpm (most do better at 20).

I don't know if it has anything to do with "faster brains", but you'll
certainly do better learning the character sounds as unique units
rather than having to mentally translate dots and dashes. At 5 WPM
the character sound is so dragged out that you automatically break
it up into dot and dash sounds. Then you have to do a mental lookup
to translate those into characters. That's not good. If you run the
characters at 20 WPM instead, the different character sounds are
much easier to recognize as distinct sound units.

This is the basis of all of the training programs using Farnsworth
or Koch methods. The Koch method also takes advantage of the
concept of symbol space. It teaches you the character sounds in
pairs which are separated by the maximum Hamming distance
in symbol space. This makes it easier to fix the sounds in your
mind.

A related problem is being able to transcribe what you hear.
(It isn't copy until it is on the paper.) If you are a slow writer,
this can be a terribly limiting problem. You must learn to
"copy behind", and use the time available in word spaces
to catch up your copy. An excellent way around this problem
is to copy with a keyboard. Most people can type much faster
than they can write in longhand (and write in longhand faster
than they can print).

Koch drill is a lot like the typing drills you had in typing class.
And it works very well when copying by keyboard. After enough
practice, the fingers just type what the ear hears without involving
the conscious mind. This is the ideal. Reflexes, which don't involve
the conscious mind, can respond much faster than volutional

actions.

The standard advice I give people doing Koch drill is *DON'T THINK*.
Being a modem does not involve thought. If you think, you slow down.
Just let the body do. You can read the copy later after the over to see
what was received. (It'll make much more sense at normal reading
speed anyway.)

From: Clay Phillips <nitehawk@seasurf.net>
Message-ID: <6j68qc$a32@tcl.mtjeff.com>
Source record: 172550

There are many reasons to work 70 cm, often the 440 band will suffer less interference from out side sources such at computers, telephones, pagers, and the like, Also 70 cm tends to work better inside buildings.
Another reason to use 70 cm is that it IS less used so your QSO's are not interrupted as much and your not bothering others. 70 cm is becoming very popular in many areas with 440 repeaters going up all the time. 2m has gotten very crowded, and 70 cm has so much more bandwidth to offer. I'll admit that if I could only have one I'd chouse 2m but this is really not the case, often it is only a mater of another $50.00 to get a dual band radio, there even dual banders that are cheaper than some single band models. Give 70 cm a chance, it's not a companion, it's a partnership

Very well put, Will. One of the hardest things in a NG (or, on a repeater, for that matter) is to get everyone to ignore the trolls.

I have been very pleased with one of the 2-meter repeaters in North Carolina (a very wide-area machine) where the users have all agreed to totally ignore a station which burps and coughs. The guy still tries it from time to time, but he now gives up after one or two transmissions because it gets absolutely no reaction.

The same thing does wonders for a NG, also. I recommend that we try it.

2160. Rohn tower specs.??

All of the equipment listed below is my personal equipmnet!
I have not had the time to get my license! It is about 1.5 years old. All the equipment is new and has manuals. It works well as it has not been run for more than 5-10 hours per piece...I have no time to get my license so I have deceided to sell it all.....

1- Yaesu FT1000D with manuals excellent shape this is the deluxe model , I have many extras with this.
a.) Kam-Kamtronics
b.) Cushcraft 5 Band Vertical Antenna
c.) Elctorinic Keyer-
d.) Yeasu Heavy Duty Rotor
e.) Rotor Wire 100ft.

I also have a FT2400 brand new and a 12 volt power supply

I also have an FT470 with large battery..

Make me a reasonable offer on the above items...

I hae invested over $7000 in all this equipment .

I will not give them away so please don't embarrass me and you by some low stupid offer. I will sell for a fair price for these Unused pieces of equipment. Make me and offer by the piece or all of it.

I have a friend who has a 40 meter amateur radio rig in his '98 Blazer. Every times he modulates the signal the all the dash lights come on, go off, and the engine stalls. Obviously RF is getting into the computer. He has routed the battery leads and coax on the left side into the frame where possible. Any ideas I can pass along?

Thanks, you just saved me $2700.00. Can I invest in a TS-950-SDX Kenwood top of the range?

I am assuming foolishly that a TS-950 will out perform a 440 AT? How foolishly am I thinking?

Ergonomically FT1000 looks better, but who needs that when what is important is selectivity based on antennaes. I do not have the time to acquire low end and high end antenna for 40 meters! Can't the FCC protect Americans for once from these Japanese engineers?

Nothing short of a full refund from Yaesu will be entertained from me, if I was in your shoes. It is nothing short of day light robbery, and we are attacking the president for sleeping around. This is gross incompetence.

I intend to replace some of the filters in my NRD535, so if anyone has the replacement Crystal filters for the 535 at a good price, I may be interested. I also have a 1.8khz filter for the NRD that I would like to exchange for for the 300hz, 500hz or possibly the 1000hz, so if you have these, but are mainly interested in SSB, please contact by email

Also wanted, the Bandwidth Control Board for the NRD535.
I am in the UK.

Dick:

I'm just glad I never made a significant investment in UHF gear! But I
am glad I know the code! You see, unlike all the permanent Techs, I
still have ALL of my usual operating spectrum intact!

(BTW -- my guess is that the FM/repeater portion of 70 cm, from
440 - 450, is pretty safe. If PMRS gets in there at all, it will have to
be on a "shared" basis in the less populated areas.)

<<
Thank you for this information.As I have been inactive the past 10 or so
years I was astounded to hear these signals on 10 meters.Your solutions are
much appreciate.Do you have any other updates or info on this issue??
>>

Hi, Bob. Thanks for your e-mail.

Asian radio manufacturers have discovered a gold mine in South America! They are selling cheap 10 meter radios which can be easily modified to cover 11 meters. The folks in Central and South America are buying them by the shipload because the telephone and road systems are so bad. Radio is the ideal way to communicate. Taxi drivers and truckers are using them as cheap dispatching tools. And a breed of hobbist has sprung up to do some "DXing".

These radios have channels spaced 10KHz, and in our band, these appear at 28,005, 28.015, 28.025, and so forth. For a number of years, band conditions have been poor, so even some US stations felt they had found some "quiet" channels they could use to get away from the bedlam on 11 meters. Now, it is up to us to let them know these frequencies are occupied.

An informal "network" of US stations has been active in transmitting on top of the intruders to let them know they need to move. Some of these are "big guns" with beams and amplifiers; others are modest stations where the operator has time to chase off pirates. Most of intruders are running 8 watts AM and 15 watts SSB, so it does not take much power to get their attention. Also, we found that they hate the sounds of CW and RTTY.

Hope this fills you in on what's happening. Working together, we already have made a big difference in what's heard on the band. It will get even better as more US hams join the battle!

Paul,
When the band is up, you can find CW between 50.08 and 50.100. Using CW on 6 M is a great way to snag new grids under marginal conditions or if you don't have a big station. Unfortunately many of the 6 M ops would rather miss new opportunities than try CW, so there isn't much QRM.

> Eg. a 56Kbps data stream comes into your analogue modem over
> the standard 3.1KHz-wide PSTN channel. QED. (Hmmm, I wonder
> what the actual symbol rate is.)

This is not true. The 56k standard creates signals _wider_ than 3k1Hz!
That's essential for it to work. It violates the niquist rule, and changes
state 8000 times per second. The switching center digitizes this signal,
and obviously doesn't apply hard anti-aliasing filters (these would
effectively force 56k modems to fallback to v34).

The big problem of 56k modems and their lengthy connect is to find out
which voltage level the switching center translates into which binary code,
as well as to exactly synchronize to the digitizer's 8khz clock (both of
which is done without help from the switching center itself)

The copper twisted pair cable from your modem to the switching center is
not limited to 3k1Hz and therefore does not attenuate the 56k signal (after
all ISDN and other services come via the very same type of cable, too).
Most amplifiers or 10-POTS-subscribers-on-one-cable-multiplexers however
would do so. They usually are designed with the minimum bandwidth
(k3-3k4Hz) in mind.

> 360-degree wave (I say "or more" because in reality, two samples would
> actually recreate a square wave when converted back to analogue).

No! When you sample a signal, you remove all spectrum components above nyquist (half the sample rate) with an analog filter (anti-aliasing filter). The highest possible frequency contained in the digital output (near half the sample rate) will _in_fact_ be represented by (almost) only 2 sample values per period.

When the digital signal is played back analog, another filter is required. It removes all components above nyquist (half the sample rate), and is called anti-imaging filter. It removes all spectral lines that make the "square wave" look "square", ie everything that distinguishes it from a sinus wave. All this "everything" that has been introduced by the time discrete storage is violating the "no frequency above nyquist" citerium and can therefore be split from the user signal.

This is no big deal and known since long time. All soundcards and DSP equipment use this technique. It is definately not necessary to represent the period by more than 2 samples "in reality" (note that the user frequency has to be (at least infinitesimally) _below_ nyquist).

> Microsoft's ADPCM

Well, Micro$oft did not actually invent ADPCM, nor the mouse nor the graphical user interface. While at it, they also didn't invent multitasking nor multimedia, ... They didn't even invent "good marketing for poor products" although that's what made them what they are now.

^^

Marc, your comments seemed misleading to me. You seem to imply that the
56k technology is using more bandwidth than is available on the phone lines.

I found a wonderful white paper describing the k56flex technology:

http://www.nb.rockwell.com/K56flex/whitepapers/k56whitepaper.html

it explains how the new technology works without violating Nyquist or
Shannon.

Larry and Dick,

You gentleman are missing the boat *big-time* here. You're adopting
what appears to be a mildly gleeful attitude about the possible loss
of amateur spectrum, because you're polarizing on a "code/no-code"
basis. Last time I looked, the 70cm band is also used by General,
Advanced and Extra class licensees. I'd suggest that you folks
put aside the chest-beating prattle and think of this as what it
really is - an action that impacts all amateurs.

Does anyone know what the "manufacturers" password is for the Vertex programming software? Some of the programs have a command line option, -m, that lets you use the software in manufacturers mode. CE14, CE6, and a few of the others utilize this option. Any help would be greatly appreciated. Please reply direct. TIA all.

>longer fun I'm sorry to say..John N0UIQ
>
>

HF no longer fun? Selling HF gear? I would have said just the opposite, though I don't do phone. Nothing but polite QSOs for me on CW, and generally the same on RTTY. The only rudeness I have encountered on CW is stations wanting my QSL (One reason I no longer QSL) so bad that they interrupt a good ragchew to let me know they are still there, HI. Mostly this is unintentional, anyway. I have NEVER heard a foul word on CW, ever. Never any insults. Never any arguments except on the most polite and cordial terms.

BTW, I am selling my HTX-202 with spare battery, charger, and collapsible whip. $125 shipped, $100 you pick up. I guess I'm just not a VHF type of guy. If I could afford to buy stuff right now, I would like to know what HF stuff you have for sale. To each his own. You like VHF, I like HF... no problem. Still it is puzzling why so many people hear trash on HF fone and lump CW ops as well as the good fone ops in the same category and tar us all with the same brush.

To all who have dismissed HF as trash bands with trash ops... I urge you to take another listen on the CW portions. If copying CW is hard for you, try a TNC, homebrewed interface, or HAMCOMM style demodulator. Check us out! If you got the ticket, throw out a CQ or two. With a computer, the worst Morse dunce can have a decent QSO, as some have done with me. I don't mind sending to a computer at all, though I usually then have to resort to my own for sending for the other guy to get decent copy onscreen. For that matter, check out 14078 to 14086 or so for the RTTY action. Lots of nice long ragchews without a cross word. True a lot of hams like to use their MICs for weapons, but hey... I can't even FIND the only mic I own!

Personally, I have gotten some good advice here, and learned a lot from reading the posts of those more knowledgeable in various facets of the hobby. I know that when I need help with a technical question, I can get that help here. My social purposes in subscribing to this group are rather limited and not very sgnificant, though I have met hams here that I correspond with via email. The flamefests are sometimes entertaining, sometimes repugnant, and sometimes boring. I can read a particular thread or not, depending on what kind of mood I am in. I would suggest not taking things too seriously here. Delete or ignore posts from people or on threads that from past experience you assume

will be offensive.

I have read the CB ng, and things do appear to be somewhat more restrained. The incidence of foul language is a bit less than here... A moderated group might be the answer. Things could remain a bit wild, rough, and uncensored on the old newsgroups, but there would be a more family-friendly group that one could let his kids follow without exposing them to all the crap.

To answer the original question, IMHO, no, all hams are NOT assholes. Some are, but certainly not all, or even most.

>
>

Yeah... AMTOR or PACTOR would be even better, as the pirates could not disruppt a link like they might a CW or RTTY QSO. The more robust digitlal modes will get the data through sooner or later, usually still at a throughput higher that the legal operators can type comfortably. Two or three closely spaced PACTOR QSOs would make bootleg fone traffic on that channel not merely difficult, but impossible. Here's a cure for the AM bootleggers, on the frequencies where it is legal... MCW, which is easily implemented after a fashion in AM mode with a source of a nice, racuous audio tone into the mic jack, and the normal key in line with PTT instead of it's regularl place. AMers can often ignore CW or SSB unless the signals are very dirty or very strong, but MCW will get their attention loud and clear. Or how about AFSK RTTY in AM mode? If you can hear them when they are using less than 10 watts, they will sure hear you with 50 or 60 watts AM typical from an all-mode ham rig. Also, I would suggest 425 Hz shift instead of 170, with lower tones than the "official" ones. Maybe about 900/1325 Hz, for those who can change these parameters at their station.

I say if they don't have a license, drive 'em off the ham bands. Let them go somewhere else.

I guess the differences in ability, talent, or whatever makes it easy or hard to learn the code, makes the hobby/sport of Ham Radio so interesting. If we could all do code perfectly and easily, the airwaves would sound like computer data.

I for one, haven't upgraded because I have other things going on, like my 2 year-old daughter and a business. As soon as I make the time, I'll go for the Extra directly. Until then I'll be happy on VHF.

2205. License Renewal "W5YI" Question...

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-12 00:00:00 UTC
From: Boink <kaminski@nospam.teleport.com>
Message-ID: <01bd7df2$ea69c5c0$67aacacc@default>
Source record: 172447

Don't know if this is common knowledge... it's not for me. My license is in need of renewal, and I knew I'd have to go fill out an 610 with the FCC this year. Ten years is a long time, and I'm out of touch on the renewal process. However, I just got this nice note in the mail from the VEC W5YI group indicating that they'd take care of it for me for $6.

Questions (sorry if dumb):

1 - is this a legitimate process?
2 - is the $6 well spent (since I assume that some of it goes to VECs)
3 - if I do it myself, can I file electronically too?
4 - is this RF safety thing critical in the application (or is it simply another new rule that I acknowledge by renewing)?

Thanks.

> older model.

Play on words, maybe, but no it won't....not unless
you program in freqs 30 kHz apart. The 30 kHz
thing is the STEP increment for the SEARCH mode;
not the "scan" mode.

I wasn't talking about *cordless* phones, though.
At least, not what the kind we Yanks use.

> *Cellular* (from 890 to 960 MHz) is all digital, multiplexed
> (8 connections per chanel), and scrambled! It uses 200kHz

THAT wouldn't be an issue for scanners, anyway.

> There is another digital cellular phone system operating
> between 1710 and 1880 MHz, about which I don't know the
> details. But it too doesn't use 12.5kHz steps.

Neither is that one an issue for scanners. We're
talking about the conventional voice cellular bands.
The kind that *some* scanners can detect.

> In some european countries there is an "older" public phone
> network operating between 450 and 466 MHz that uses various
> stepsizes (20/12.5/10 kHz). It's analog, but truncted and

Neither are "ours".

> There used to be another, which used some bands within the
> 148 to 163 MHz range, but this one has gone outof service

> a few years ago. It used 20kHz steps and communication
> was in the clear.

But that isn't or wasn't cellular, either.

> BTW: You're not allowed to listen to any of those over here. :-(

No shit? I thought you guys were more enlightened than us.

> While you seem to know a lot about how things are in the US, you
> should better inform yourself, before publishing "facts" based on
> guesses. ;-)

Sorry, but I wasn't "guessing". And we ARE talking
about scanners, no matter what. Your exceptions are
not within nor even close to the scanner realm.

> If somebody *realy* is interested, I can post (or mail) all the
> details I might be able to dig out.

Somehow, I doubt that anyone is interested in the
exceptions that don't pertain to scanners and scanning.
But I could be wrong, I guess.

Announcing:

."Hamfest INDIA '98".

To be held in Bangalore, South India.

Bangalore, high tech and ham capitol of India, is proud to host this hamfest in the
75th Year of Amateur Radio in India.

1500 hams are expected to attend this three day event. All foreign hams are
welcome and encouraged to attend.

2nd Oct. 2pm Registration.
3rd Oct. 10am Doors open, technical meetings, exhibits, etc.
lunch and dinner included.
4th Oct. Planning meeting and closing of hamfest after lunch.

Activities during the hamfest will include exhibition stalls where
manufacturers in electronics and other related products will
display their wares.

The registration fee is Rs.200/- This is about $5 U.S./

If any one needs assistance booking hotels,
sightseeing trips, etc., we can help.

For more information visit our web site at:

http://www.angelfire.com/in/hamfestindia98/

or contact:

- VU2LU, Ramesh, vu2lu@hotmail.com (India)
- WA5VPW, Jim, jpfin@worldnet.att.net (United States)

73 and hope to see you in Bangalore in October!!

O.K., Then what, if any, scanners *do* scan the cell band at the proper
30khz steps? (I guess I'm still confusing scanning with searching)

Thanks,
Bob

>
> Similarly, Hawaii seems to be assigned AH6, KH6, NH6, WH6. Are they
> all equivalent for reciprocal operation?

All of these would seem to be legal, but mainly for historical reasons
people use "W" in the continental US ("VE7XYZ/W7") and "K" elsewhere
("VE7XYZ/KH6"). Other than that, the requirements are symmetric:
"portable" and "mobile" on phone, "/" on cw/rtty, and location by town
and state once per contact. Note that in the US you have to ID every
10 minutes, not every 30, and it must be in English.

You can read the US regulations at:

http://www.arrl.org/field/regulations/news/part97/

A text version is available for download at:

http://oak.oakland.edu:8080/pub/hamradio/arrl/infoserv/rib/part97.txt

Seems like the majority are anymore I have been licensed for 25 years and I feel the same way you do, even VHF sucks anymore. There are to many assholes migrating up from HF. Saturday I was talking on 6 meters about the time I built a beam for a new ham when a local 8 call asshole here in Phoenix named Al came on and made the comment about falling asleep when someone talks technical. I guess the appliance operators are taking over, we can't even talk about building equipment anymore for fear of bringing boredom to the bands.

73 ham radio

WB8VLC
That other 8 call ass makes me ashamed to hold an 8 call or even any call for that matter.

Sorry to hear that John, unfortunatly your allowing a few bad apples to spoil what I must guess was / is an enjoyable hobby for you. There is a lot of activity on HF that is fun, ever work any of the QSO partys? I like them because thier quick and since most all revolve around counties, they have a slightly different twist than the big contests. After running a few of them I began to hear the same group of guys who were participating, at the end of the contests most meet down on 75 to talk about scores and 'special event' stations they may have worked. Lot's of fun, and you can make some good friends.

Bottom line, if you choose to seek out the 'good guys' you'll find them, the hobby is as fun as YOU make it.

In regard to license renewal. As far as I know there is no charge for licence renewal or change of address
when submitting a Form610. I imagine someone MAY charge a fee to do all this paperwork for you though.
(Nice of them to remind you) They still need your signature on the 610 form.
It's similar to those frequent adds in newspapers when someone advertizes postal exams. They are NOT
the post office but they give training sessions and practice tests for a fee.

To: burt@innocent.com

Burt,

I received the April issue of QST in the mail yesterday. I was reading the correspondence on
page 24. One of the letters is titled "Top ten things a ham needs in his/her shack."

Reason #2 reads "A picture of you with your arm lovingly wrapped around your loved one, ie, that
brand new transceiver!"

It pretty much emphasizes your point of where hams place their priorities.

2223. The last great real mans ham test

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-12 00:00:00 UTC
From: burt@innocent.com
Message-ID: <6j84ri$2tt$1@nnrp1.dejanews.com>
Source record: 172498

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take
test.
1O or more. Call the funeral home, send your name
into QST as a Silent Key.

Hi Burt, I would have to agree with you whole-heartedly. Ham
Radio is at
an all time low, and never will recover. Just look at QST,
there is not
one thing in it new in the last 20 years. Packet is the only
thing new
that has come along in my 30 plus years of radio, and its so out
date a tin
can and twine string will outdistance it.

Our local hams that consider them self in "Public Service andand
hearing aids squalling. Im like you, Im sorry to be
pessimistic, but im
also a realist.
Disaster
Service" are the disaster. Just let something happen here and
this is a
busy tourist town, it would be an all out free for all with HT's

<<
Please send details for defending the ten meter band against intruders.
73, >>

Sorry for the delay. It is the busy time of year for me.....Here are the suggestions, in brief form:

1. When choosing a frequency to call CQ, pick one ending in "5". The intruders have assigned channel numbers to our 10 meter band, every 10KHz, starting at 28.005 (28.015, 28.025, 28,035, etc).

2. If you hear AM transmissions, especially below 28.5 MHz, it probably is an intruder. It is okay to transmit on top of these illegal stations. The FCC has indicated it will not consider it harmful interference if the intruder station is not supposed to be in the Amateur band in the first place.

3. Do not engage illegal stations in conversation, except for a brief announcement to them advising them that they are operating in the allocation of another radio service and stating that they should return to the normal CB band to continue their conversation.

4. (Optional). Some hams are transmitting CW bulletins, RTTY and Packet on top of the pirates to discourage them from using ham frequencies.

5. (Optional). A few stations are transmitting the following message in English and Spanish:

May I have your attention, please. You are transmitting on frequencies reserved for international data communications and radio beacons. You should not be transmitting on this frequency without permission from your government. If you have questions concerning your authority to transmit on this radio channel, please consult the telecommunications ministry of your government for more information. (In the United States, this authority is the Federal Communications Commission).

We do not have any "official" word from the FCC that #3 and #5 are permissible. However, it is known that the FCC is aware of the practice and there have been no negative reprecussions that I am aware of. Nevertheless, perform those at your own risk. (A high school Spanish teacher will probably make a taped announcement which can be played on the air).

Thanks for your interest.

>WPM exam. Again, it all has to do with the degree of motivation you
>have.

Generalization alert! I know people who are highly motivated, use all the right practice techniques, practice diligently, and still don't get it after years of effort, not even 5 WPM. I had a rough time of it myself, though not to that extreme. It took me 6 weeks to get to 5 WPM and 13 months of 2 hour a day practice to get to 13 WPM. (That was with the old fashioned progressive approach, but it wasn't 1 WPM per month, I hit the wall at 8 WPM and was stuck there for months before I finally broke through. My personal best ever speed, when I was NCS of the KTN, was 18 WPM. That's another wall for me.)

OTOH, I know others who picked it up in a week or two. A close friend of mine did, much to my annoyance, back when we were both Novices trying for General. He's one of those insufferable people who operate Morse mobile in motion. The variation, even among highly motivated people, is very large.

I once thought, as many do, that musical talent had something to do with it. I don't any longer. I now know some professional musicians who just can't get it, and some tone deaf hazards on the dance floor who took to it like a duck to water. It is a separate talent. I've done a bit of research on this since I had such a hard time of it, and that got me curious to find out why. I still don't know the answer for sure, but it is a different area of the brain which is involved in emulating a modem than is used for either musical ability or language fluency. There is no noticable correlation between either of those abilities and Morse talent.

But even a no talent can usually bang out a wooden rendition of Chopsticks if he hangs in there long enough. And most people lacking the Morse talent can squeak through the 13 WPM test if they keep at it long enough. Good drill techniques can help. Those techniques weren't around when I was struggling with Morse, but they've been a big help to people I've tutored to pass the tests in recent years. (Actually, the Koch technique dates from WWII, but it wasn't widely known in amateur radio circles until just a few years ago.)

I can teach anyone with an IQ above plant life enough electronic theory to get through the written exams, but I can't teach everyone Morse Code.

There is a talent factor there which cannot be denied. It isn't the same as musical talent, but it has some similar features. Among highly motivated students, maybe one in ten picks it up easily, eight in ten get it after more or less struggle, and another one in ten just doesn't get it at all. (That's not a rigorous statistical breakdown, I've never seen one of those, but it tallies fairly well with my own experience teaching amateur classes.)

reply to Peter Ivakitsch------

The first reply you received took you to a Toronto website which the home page states is under construction, and maybe not much help.

A more direct answer would have been like this:

If you are using a scanner, enter 118.0-135.95 as your search frequencies and linten. All VHF aircraft tranmissions are Amplitude Modulated signals, so your scanner must be capable of receiving AM. Round up some frequencies you catch from using the search mode and then you can plug them into available channels.

Another trick is to listen as the pilot reads back to ATC a new frequency assignment. Quickly write it down. Then program in this new freq into an open channel. This will help you pick up more frequencies being used in your area.

There are lots of FAA frequency assignments, but only a small minority will be used in any given location.

Hope this helps

1. It is a dead band. Since hams have nothing to say, they need more places to say it.

2. The rigs are cheaper than 220. If you are trying to fill up your house with useless ham rigs its cheaper.

3. The antennas are shorter. Hams like smaller antennas these days because they emulate their own inadequacies.

4. The range is worse. Hams want to fit as many repeaters as they can on the same frequency so they can complain during openings and threaten each other with "PLing the machine."

5. There is less of a chance of intereference. Hams are cowardly and don't want to cause problems they will have to go near other non-hams to solve.

6. Two HTs doesn't make your belt sag as low during hamfests.

7. Two HTs blasting isn't confusing to determine where youre being called on.

8. What will hams do with those mobile dual banders they never use on 440 if there is no 440 ?

9. Local amateurs will not be able to leave the 2 meter repeater and go to 440 because the 2 meter machine is busy and they don't want to interrupt although it then takes 6 minutes on 2 to figure out the 440 offset.

10. What will old rich hams do with their pensions ???

SB QST ARL ARLB032
ARLB032 Call to action on LMCC

League calls members to action on 70 cm petition

The ARRL says the recent Land Mobile Communications Council petition seeking access to 70 cm is ''incompatible with continued amateur use of the band'' and urges members to comment in opposition--not only to the FCC but to the LMCC's members. The LMCC has petitioned the FCC for immediate reallocation of 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service. Amateur Radio enjoys the use of 70 cm on a secondary basis. The LMCC has proposed to share the two subbands with Amateur Radio, but has not said how sharing would be possible. The LMCC also seeks additional UHF reallocations in the intermediate and long term.

For those planning to file comments, specific information and recommendations plus a copy of the LMCC petition and a list of LMCC members are available on the ARRLWeb page at http://www.arrl.org/news/bandthreat.

Commenters should explain how the loss of access to 420 to 430 and 440 to 450 MHz would affect them personally and how it would affect the ability of hams to provide needed public service. ''Even if you do not use these segments yourself, it is likely that loss of access would result in more crowding and interference in the part of the band, or in another band, that you do use,'' said ARRL Executive Vice President David Sumner, K1ZZ. ''Don't overlook the fact that if you use linked voice or packet systems, it is quite likely that some of the links you rely on are in either or both of these segments.''

Amateurs involved in public service communication can ask the government and nongovernment agencies they assist for written statements of support. Hams also should urge Amateur Radio organizations, especially those with interests in the 420 to 450 MHz

band, to comment as well.

The LMCC, a nonprofit association, includes several well-known organizations such as the American Automobile Association, the American Petroleum Institute, the International Association of Fire Chiefs, and the Association of Public Safety Communications Officials-International (APCO), a frequent Amateur Radio supporter. The League suggests that ARRL members who also belong to one of the LMCC member organizations consider writing to inform the organization that the LMCC is acting contrary to your interests and requesting them to disavow the LMCC petition insofar as it affects Amateur Radio.

Sumner said ARRL members should not complain to members of Congress nor write angry letters to the FCC. ''The LMCC petition is a private-sector initiative, not a government proposal,'' he said. ''By law, the FCC has to put the petition on public notice and invite comment. That's all the FCC has done with it.'' Sumner says that criticizing the FCC at this stage would be ''inappropriate and counterproductive.''

The primary occupant of the bands in question is military radiolocation (radar). ''Before the FCC can take the next step to reallocate this spectrum, it must get the federal government to agree,'' Sumner explained. Then, the FCC would have to issue a Notice of Proposed Rule Making and solicit public comments on its proposal. ''In other words, nothing is going to happen overnight, and there will be at least one more opportunity for public comment.''

The FCC is accepting only written comments in response to RM-9267. Comments are due by June 1, and reply comments are due by June 15. Address comments to RM-9267, Secretary, Federal Communications Commission, 1919 M St NW, Washington, DC 20554. Formal comments must be submitted in quadruplicate.

Source record: 172325

I have a Yaesu Ft-101 HF rig. 10 meter thru 160 meter. It has a
crystal for each band. (4 for 10 meter).
It also has the crystal for 11 meter. Can I convert the 11 meter to 12
meter just by switching crystals?
The 11 meter crystal is 33.02Mhz. My calculations indicate that 12
meter should have a 30.52Mhz .
This should correspond with my tuning dial also. Will this work? Can I
get by without any re-tuning?

I had a similar problem with my GMC pickup. Discovered that the cab,
being mounted on rubber doughnuts, was not grounded to the chassis.
I added a large ground strap from one of the seatbelt mounting bolts to
the chassis, and it fixed my problems with RF getting into everything.

2254. HELP: IC2340H service manual help needed

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-13 00:00:00 UTC
From: Larry Menzel <lmenzel@millcomm.com>
Message-ID: <355A78D8.5FFB@millcomm.com>
Source record: 172329
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap

Hello listers:
I don't have a service manual for my IC2340H Dual bander. Can
someone who has one please tell me the value of L8 on the two meter
side of the radio?

On the advice of my local radio store, I replaced the high power module
but this may be the problem.

Any help will be greatly appreciated!

2255. Adding PTT sw. on Yeasu hand held

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-13 00:00:00 UTC
From: Paul Connors <pconnor-s@a-lmaden.ibm.com>
Message-ID: <355A8788.715A3A94@a-lmaden.ibm.com>
Source record: 172330
Cross-posted to: rec.radio.amateur.misc,rec.aviation.hang-gliding

I've got a Yeasu FT-11R 2m with a PTT set that I use mostly for recreational purposes. I'd like to add a finger operated PTT switch I could tape to my hand (more convenient), instead of using the little clip on VOX-box provided with the head set. I've got a switch picked out, and I've found the taps inside the VOX-box where I need to solder on.

My question - what kind of wire should I use for this open-close switch? Is twisted pair in a sheath adequate, or should I use shielded pair? Someone I talked to at work, who has more experience in electronics than I, said that there is a slight chance of a cross-talk problem, i.e. since the wire runs the length of my arm {.5m=(1/4)*2m}, it would act as an antenna when open (recieving). Should I worry about this issue? Please respond to NG or direct.

Thanks Much!

I suppose so.

> 2 - is the $6 well spent (since I assume that some of it goes to VECs)

No. You can call the FCC toll-free and request the 610, if your local
VEs won't give you one (they usually will). Then, you supply a copy
of your current license, an envelope and a stamp and send it in. Done.
I have no idea what value W5YI adds to the process. It apparently isn't
a sham but it rubbed me so wrong that I won't knowingly send W5YI or
anything he's involved in (including NCI) a single penny.

> 3 - if I do it myself, can I file electronically too?

Not yet.

> 4 - is this RF safety thing critical in the application (or is it simply
> another new rule that I acknowledge by renewing)?

Apparently there isn't much to do with the RF safety rules, they're mostly
waived for amateurs, it seems.

Thanks for reading this.

AEROTRON RECEIVER NEEDED

I am in need of an Aerotron 60BR1 Mpac VHF Base Station
Receiver, 132-174 Mhz to use as a test fixture and back up
receiver for two of our local repeaters. I would like to have
the complete receiver but I would settle for the receiver case
with the master interconnect assembly.

You can email me at omega@worldnet.att.net or you call me at toll free
at
1-888-798-7373 week days or collect in the evenings at 1-919-231-2829.

Thanks.

Hey Matt, I don't think it was an mtu generalization...

He probably is just trying to show that he has the ability to
go to a web page, lookup an email address, and figure out just
what department someone is in.

Kind of mindless task to most of us, but apparently he has to put
some effort into it and needs to show that he can look up a major.

Almost as dumb as someone sending me the address for the university
in an e-mail with nothing else in it. Ooooh, scary!
(Actually happened once)

He just saw Joe was an EET and wanted compensation for his trouble...

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side, ferrites, non Micrometal parts and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

Gee, are you sure? Well, dohhh...

What I was trying to say is that if the general truck / trucking
company
operators were to maintain their attitude as they are now then the hell
with them.
I realize that not all of them are like that and I apologize to those
who
might get offended, but after years and years of highway driving I've
seen
it all. The stunts and tricks they can pull off are just amazing but
that's
OK 'cause my cell phone is ready to go anytime one of the pisses me off.

All those who are about to respond that this topic doesn't belong here,
I agree.
Let's take this somewhere else boys.

> 30khz steps? (I guess I'm still confusing scanning with searching)

The two are very different functions. Scanning is
the automated repetitive tuning of two or more
pre-programmed frequencies, typically what you
key in to the memory bank.

Searching is an automated service that "scans"
at preset increments all frequencies between
upper and lower frequency limits. This limit
may be user-definable or it may be embedded in
the firmware at the factory, depending on the
scanner.

In a word, you program into memory anywhere from
a few dozen to a few hundred frequencies to be
"scanned", whereas the Search function is very
methodical and thorough in sampling every freq
between the predefined limits.

Good points Dana. Thanks. W5YI suggests that some of the proceeds go to some sort of VEC fund (whatever that is), and, to give them a little credit, they did send me a fresh 610 with the paperwork. Evidently, one fills in their (W5YI's) short form, signs it and sends it to them to file. I had already planned on calling the FCC to see what the procedure was all about these days (given that I haven't renewed since 1988... and, I think, before that 1978 when I got my current callsign).

I'm looking for a copy of the August 1979 QST magazine. My mom Phyllis WB5YJO is on the cover and I was wanting a complete copy to keep for our personal memories. We had one copy but it was destroyed by water. If you have one or know someone who does please drop me a line.

IMHO, You missed the point. It is not the short range distribution with trucks, which makes the problems, it is the long haul transport. It may be slightly different in the USA, but here in Europe the *big* problems with traffic are due to the fact, that e.g. Finnish trees are sent to Italian sawmills and then to danish furniture companies to be brought back to Spain and sold there. Even worse, cattle is transported all over Europe, just because the slaughterhouse at the other end is slightly cheaper. This is perverse, period.
Independently if such ping-pong transports are reasonable, the overall costs (road maintenance costs, air pollution, public costs due to accidents, traffic jams etc) of trucks would be ways higher, than those of trains. The problem is simply, that not the truck companies (or their customers) have to pay it, but the public (via taxes, etc). This is why the cost comparisons between truck and train transportation are so distorted for the advantage for trucks.

73 Robert

PS: we should move this discussion to a more appropriate NG.

Looking for a used inexpensive memory keyer and an Iambic paddle of some sort. Keyer only needs 4 memories. Mainly looking for something to call CQ with. I know about all the keyer chips and all that available out there that but have no time to build so just looking for something ready to go. Paddle could be an old Brown Bros., Bencher, HamKey or similar but must be Iambic. Condition not important as long as it works good. Email me please.

Subject: ** FLEA at MIT ** Sunday May 17th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 17th, 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Is it:

PAPER - ROCK - SCISSORS?

NO! It's:

*** XTALS - ROCKS - STONES! ***

For those interested, there has been a MAJOR Update of the CRYSTALS SWAPPING PAGE in the past few days!

If you have CRYSTALS to SELL or you want to BUY some CRYSTALS, chances are you will fin djust what you need on this free web page!

HUNDREDS of sources for crystals listed, and many thousands of crystals for AMATEUR RADIO applications are listed for sale!

dozens of amateurs have listed their WANTED ads recently too, so if you have some to sell, now is a god time to go peddle them!

Both of you are acting immaturely.

For a 26 yrs old and 26+ yr old, I'm very dissapointed.

I hope to see a bit of change around here. We are here to talk of radio, not how many girls I had sex with last week.

Well, it can't be too hard to fix! I run 100 watts daily on 40, 20, 17 and 15. With no problems at all in my '98 Blazer. Using a Hustler mounted into the metal off the rear door. Can provide more details on antenna mounting on the Blazer if interested.

> Jeff KH2PZ

Normally I'm right on track with you Jeff but I strongly disagree. I just can't IMAGINE pirates and illegal operators having a care in the world about whether they are out of band or not, they have heard the "Im calling the FCC" (paraphrase) routine over and over and know darn well that nothing will come of it. Do you really think were going to 'run them off' ? It just turns in to a jamming war and nobody wins. Besides, doesn't the biggest problem exist near 28.000MHz, what QST are you going to transmit down there?

I think it's far from short-sighted to consider what QRM I may be causing to fellow amateurs while attempting to QRM
another station or transmit a bulletin, especially considering the way 10m propagates. I've heard south american stations talking to each other across town (ground wave) Is someone in Texas going to have any effect by transmitting a bulletin indicating they are out of band? I doubt it very seriously especially since the stations are probably 10 db over 9 to each other.

#
Right. Except no one's going to know what you
mean if you insist on concocting your own terms.
"Scanning" and "Searching" are as succinct and
simple as it gets.....not to mention fairly widely
accepted in the vernacular.

Icom IC-Z1A manual, page 30:

Full scan: scans all frequencies over the entire band (I would assume using whatever "step" you have set)
Memory scan: scans all memories in sequence
Programmed scan: scans all frequencies in a user programmed range

So I said band scan instead of full scan or programmed scan. Point is, I didn't invent any terms not already widely in use, at least in my part of the country/world.

Matthew

You might try the ARRL at www.arrl.org - search for QRP for more
specific information. I have always had good luck signing kx9i/qrp
in either mode. QRP-to-QRP contacts are great fun. I remember on 40,
late at night, working a ham with the exact same rig (HW-8). We had
quite a long QSO. Good luck.

Your biggest need is for flexibility. Go to the basement where you dump all
that broken stuff
that you can't bear to throw out. Find an old walkman headset and use the
cable fom that.
Very flexible, shielded too.

Additonally, I understand it, I just don't agree with it. I'm a serious 75m operator during contests. I could use the band space taken up by groups like the stumpjumpers and liberty net types, Should also send them a QST telling them that they are causing willful and harmful interference that music is not permited and that an I.D is required every 10 min.? Sheesh, you must be kidding... I think a bulletin on 10m would have about the same impact. Zero.

Some of those frequencys on 20 and 75 have been tied up for 20 years or so with the same junk, nobody has managed to run them off not sure how one could possibly hope to 'run off' some out of band CB'er let alone one operating in another country. All they are going to do is move up and down the band. I'd rather move up the band and enjoy a QSO than waste my time jamming.
If I were to do ANYTHING I'd provide a club 'bulletin' providing information on how to become a radio amature, perhaps an on air study class etc, that CB'ers could tune into while tuning the ham bands. I guess I subscribe to the 'honey vs sh**' theory when it comes to attracting more business.

Two more cents worth,

Tim, ka8ddz

LEAGUE CALLS MEMBERS TO ACTION ON 70 CM PETITION

The ARRL says the recent Land Mobile Communications Council petition seeking access to 70 cm is "incompatible with continued amateur use of the band" and urges members to comment in opposition--not only to the FCC but to the LMCC's members. The LMCC has petitioned the FCC for immediate reallocation of 420 to 430 MHz and 440 to 450 MHz from the federal government to the

Private Mobile Radio Service. Amateur Radio enjoys the use of 70 cm on a secondary basis to government radiolocation (military radar). The LMCC has proposed to share the two subbands with Amateur Radio, but has not said how sharing would be possible. The LMCC also seeks additional UHF reallocations in the intermediate and long term.

For those planning to file comments, specific information and recommendations plus a copy of the LMCC petition and a list of LMCC members are available on the ARRLWeb page at http://www.arrl.org/.

Commenters should explain how the loss of access to 420 to 430 and 440 to 450 MHz would affect them personally and how it would affect the ability of hams to provide needed public service. "Even if you do not use these segments yourself, it is likely that loss of access would result in more crowding and interference in the part of the band, or in another band, that you do use," said ARRL Executive Vice President David Sumner, K1ZZ. "Don't overlook the fact that if you use linked voice or packet systems, it is quite likely that some of the links you rely on are in either or both of these segments."

Additionally, amateurs involved in public service communication can ask the government and nongovernment agencies they assist for written statements of support. Hams also should urge Amateur Radio organizations, especially those with interests in the 420 to 450 MHz band, to comment as well.

The LMCC, a nonprofit association, includes several well-known organizations such as the American Automobile Association, the American Petroleum Institute, the International Association of Fire Chiefs, and the Association of Public Safety Communications Officials-International (APCO), a frequent Amateur Radio supporter. The League suggests that ARRL members who also belong to one of the LMCC member organizations consider writing to inform the organization that the LMCC is acting contrary to your interests and requesting them to disavow the LMCC petition insofar as it affects Amateur Radio.

Sumner says ARRL members should not complain to members of Congress nor write angry letters to the FCC. "The LMCC petition is a private-sector initiative, not a government proposal," Sumner said. "By law, the FCC has to put the petition on public notice and invite comment. That's all the FCC has done with it." Sumner says that criticizing the FCC at this stage would be "inappropriate and counterproductive."

Sumner reminds members that nothing is going to happen overnight with the LMCC petition, and there will be at least one more opportunity for public comment." "Before the FCC can take the next step to reallocate this spectrum, it must get the federal government to agree," he explained, because the government is the primary occupant. Then, the FCC would have to issue a Notice of Proposed Rule Making and solicit public comments on its proposal.

The FCC is accepting only written comments in response to RM-9267. Comments are due by June 1, and reply comments are due by June 15. Address comments

to RM-9267, Secretary, Federal Communications Commission, 1919 M St NW, Washington, DC 20554. Formal comments must be submitted with an original and four copies.

RSGB SAYS "NO" TO MANDATORY MORSE CODE

The Radio Society of Great Britain is taking up the banner to seek reconsideration of the IARU policy supporting mandatory Morse code testing for access to Amateur Radio HF bands. As a first step, the RSGB Council has opened talks with the Radiocommunications Agency--the UK's equivalent to our FCC--to institute an additional license class giving full HF privileges to existing Class B (no-code VHF/UHF) licensees who pass a 5 WPM code test.

"We're not trying to get rid of Morse! No way!" insisted RSGB President Ian Kyle, GI8AYZ/MI0AYZ, during a visit to ARRL Headquarters. In a statement slated to appear in the June issue of RadCom, the RSGB journal, the Society says it will continue to support Morse code and CW subbands on HF "as core elements of Amateur Radio globally." But, Kyle said, "Mandatory testing of Morse is going to go whether we like it or not."

Kyle and RSGB General Manager Peter Kirby, G0TWW, say there no longer is any good reason to insist that applicants pass a Morse code test to operate on HF. "It's stopping growth in the hobby," Kirby said, adding that he disagrees with those who think it will be the death of the hobby or would lead to lower operating standards.

Kirby, a former professional CW operator, said that making someone pass a 12 WPM test "doesn't make one a good operator." He allowed that enhanced practical testing requirements were a possible replacement, and said the Society is looking at a possible revamping of the entire licensing and testing structure in the UK.

Both Kyle and Kirby have been making the rounds of Amateur Radio clubs in the UK and floating the idea of eventually getting rid of the Morse code requirement altogether. They say most of the hams they speak with support the elimination of compulsory Morse testing. As Kyle put it, most hams in the UK are "thinking with their brains, not with their hearts."

The present UK licensing structure has two basic classes, A and B (plus a Novice class A and B ticket). The full Class A license requires 12 WPM and offers all amateur privileges. The Class B license, with the same technical requirements but no code test, offers access to bands above 30 MHz.

Kirby says the RSGB Council has determined that it cannot support compulsory Morse testing in the long term but also recognizes that it can't change things overnight. "This will ease things a bit," he said of the RSGB's "intermediate" proposal to the RA.

Kirby said the RSGB proposal "gives other countries the opportunity to debate this subject" before it's dealt with in a World Radiocommunication Conference in 2001 or 2002. He says the RSGB's plan has received support "from around the world and even from within the US," and that other European countries are beginning to embrace the British position.

At present, the IARU supports keeping the Morse code requirement, but the RSGB hopes to change some minds. "Council now believes that this position cannot be sustained in the longer term and will be opening discussions with IARU societies and other interested bodies to reconsider the position to be adopted at the WRC in 2001," the RSGB statement declares.

There are approximately 58,000 hams in the UK, and slightly more than 28,000 of them are RSGB members.

THOMAS GETS EXTRA TIME ABOARD MIR

Astronaut Andy Thomas, KD5CHF, will get a few more days aboard the Russian Mir space station. NASA has announced that the space shuttle Discovery will arrive at Mir June 4--five days later than originally planned--to pick up Thomas for the return flight to Earth. Discovery will depart Mir on June 8. The Australian-born astronaut has been aboard the orbiting outpost since January.

Thomas is the last US astronaut scheduled for a tour of duty aboard Mir. In the weeks remaining, the Space Amateur Radio EXperiment, SAREX, is lining up as many Mir-school contacts as possible. On May 7, Thomas spoke with students at Hampstead Academy in Hampstead, New Hampshire. Father-and-son team Tony Callendrello, N1QGR, and Casey Callendrello, N1QGQ, managed the ground station. The contact began on 70 cm, but a problem arose and the QSO moved to the 2-meter backup frequency and continued. "Their crew did an outstanding job with this contact as did the school and school district. I suspect the school will remember this high noon contact for a long time," said AMSAT mentor Charlie Sufana, AJ9N. "After the contact Tony and his crew were mobbed by the school kids." Nine students got to ask questions as a "spellbound" audience of nearly 200 looked on and many others listened in.

On May 8, Thomas chatted with students in South Africa during a QSO arranged especially to coincide with the Africa Telecom 98 conference. Nine students asked questions. The entire contact took place on 2 meters. Other schools in Texas, Tennessee, Connecticut, and Australia also were in the tentative queue for Mir contacts. The SAREX Working Group still hopes to fit in additional schools prior to Thomas' ride home in early June.

Only two other SAREX flights are scheduled during 1998, including one scheduled for October with US Senator and astronaut John Glenn. "The SAREX Working Group is looking at other possible shuttle flights for SAREX to be manifested on during 1999 while we wait for the International Space Station to be assembled in space," said ARRL Educational Activities Manager Rosalie White, WA1STO, a SWG member. White says every avenue to ensure the presence of Amateur Radio aboard the ISS is being explored and covered.

Space agency heads from the US, Russia, Europe and Japan are to meet at month's end in Cape Canaveral to discuss a new launch timetable for the ISS. The original schedule has been delayed because Russia is far behind schedule in finishing its primary contribution to the station--the service module that will house the astronauts. The ISS schedule already was eight months off the mark.

In late April, students at 27 school stations and others participated in a second Mir School Day test which provided a chance to make a packet radio exchange with Mir and to demonstrate the use of UI (unnumbered information) frame bulletins to communicate MIREX information to all monitoring stations. Internet-linked ground stations were able to merge their data into a comment Internet feed and demonstrate the use of ground-station-generated pseudo GPS positions that were digipeated by Mir to show its real-time position.

MIREX reports there will be another APRS School test in the very near future. This will be a school test only, and will happen with very little notice, testing the readiness of Amateur Radio operators.

Mir QSL requests (except Europe) should be sent to Dave Larsen, N6CO/K6MIR, PO Box 1501, Pine Grove, CA 95665.--thanks to AMSAT News Service, Rosalie White, WA1STO, and Bob Bruninga, WB4APR

PUT YOUR QSL INTO ORBIT

AMSAT is offering a chance for hams worldwide to become a part of the Phase 3D Amateur Radio satellite program by putting their QSL cards into orbit! As part of its "Fly Your QSL on Phase 3D" fund-raising campaign, AMSAT-NA is collecting QSL cards--accompanied by a minimum $25 donation to the Phase 3D effort--to put into space. Cards submitted will be scanned and converted into digital images, then saved on a computer CD-ROM that will be launched with the Phase 3D satellite.

AMSAT-NA Vice President Keith Baker, KB1SF, called it "a unique and relatively inexpensive way to encourage people who haven't already donated to the Phase 3D project to do so." Participants are welcome to contribute more than the minimum, Baker said, adding "and we'd be most grateful for the support."

Baker says that, due to the uncertainty of the Phase 3D launch status, "this fundraiser may have to be curtailed if we get a quick call to button up the satellite and prepare it for immediate launch." He encouraged interested hams to submit their cards and donations as soon as possible. Proceeds from the Fly Your QSL campaign will help raise the additional money needed to complete, test, and launch the satellite.

Baker said that AMSAT still has no definitive word on a launch date or vehicle for Phase 3D. "High-level negotiations with the European Space Agency and ArianeSpace are continuing in earnest on our behalf," he said.

To fly your QSL card aboard Phase 3D, send your card and donation to Fly Your QSL on Phase 3D, c/o AMSAT-NA, 850 Sligo Ave, Suite 600, Silver Spring, MD 20910-4703 USA. Checks or money orders should be made out to AMSAT. Do not send cash. QSL cards will be accepted at the AMSAT booth during the Dayton Hamvention.

For more information, contact AMSAT-NA headquarters at 301-589-6062 or check the AMSAT-NA Web site, http://www.amsat.org/.--AMSAT News Service

HAMS ASKED TO CHECK INTO HURRICANE WATCH NET

The National Hurricane Center in Miami, Florida, has asked amateurs to participate in a communication preparedness exercise to kick off the 1998 hurricane season.

Amateurs are asked to check into the Hurricane Watch Net on 14.325 MHz on Sunday, May 31, 1998, between 1600 and 1800 UTC. Stations are requested to provide a real-time report of their current weather conditions, including wind speed, wind direction, and barometric pressure. Measured conditions are preferred, but estimated wind speeds will be accepted.

These reports will be forwarded to W4EHW at the National Hurricane Center. W4EHW will be on frequency. Stations do not need to continue monitoring the net once their reports have been forwarded to the National Hurricane Center.

"We look forward to talking with you on the 31st and hope that the only time that we have to do so this season is during exercises," said Jerry Herman, N3BDW, of the Hurricane Watch Net.--thanks to Rick Palm, K1CE

ALABAMA HAMS HAVE BUSY WEEK OF WEATHER-SPOTTING

May 9 capped a busy week for the National Weather Service and for hams around Alabama. The Alabama Emergency Response Team--ALERT--responded to requests for communications assistance five times during the week, including twice on May 7, according to ALERT on-call coordinator Janice Rock, KF4PVR. The severe weather May 9 was especially tense, as a supercell thunderstorm showing signs of a tornado moved across Pickens, Tuscaloosa and Jefferson counties. The storm followed a path similar to that of the April 8 Oak Grove tornado. Although some trees were uprooted, there were no reports of major damage or injuries. "Tuscaloosa had spotters out and one spotter was reporting golf ball sized hail," Rock said. "At one point, Tuscaloosa county spotters had to deal with two funnel clouds at the same time. That made for a lot of communications needs."

In west Jefferson county, members of the Hueytown Emergency Amateur Radio Team--HEART--were on the air prior to the tornadic thunderstorm's approach, and remained active until nearly midnight when Jefferson county and the Birmingham area were placed under a tornado warning for the second time that evening. Spotter groups elsewhere across Alabama also were active as severe weather threatened. Communication took place between spotter groups in several parts of the state and ALERT using the Internet Gateway.

On May 7, when severe weather occurred in DeKalb County, Rock contacted spotters there directly using her home station. "The people in DeKalb county were excited to work with us," she said. "I pulled in a report of half dollar sized hail and the guy said it had knocked out almost every window in his house."--ALERT

FCC SEQUENTIAL CALL SIGN UPDATE (Best viewed with nonproportional font)

The following is a list of FCC sequentially assigned call signs issued as of May 4, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S.

1998 ARRL ATLANTIC DIVISION AWARD WINNERS

John Creel, WB3GXW, of Silver Spring, Maryland, has been named the 1998 Atlantic Division Amateur of the Year. Licensed since 1967, Creel is active in RACES and in demonstrating Amateur Radio to youth at summer camp. The Foundation for Amateur Radio also named John their Ham of the Month in April. WB3GXW is an ARRL Life Member and an Official Bulletin Station. He belongs to a family of radio amateurs. His mother, wife, and two daughters are also hams. As FAR said in its Ham of the Month commendation, John Creel "has made significant contributions to the Amateur Radio Service and is an outstanding model of a public and community service volunteer."

This year's recipient of the Grand Old Ham lifetime service award is Rolland Madara, W3PWG, of Lansdowne, Pennsylvania. Known as Rollie to his many friends in the Amateur family, he has been licensed for 47 years, and served for more than 25 years as an operator at the Franklin Institute Science Museum's Amateur Radio exhibit W3TKQ (now W3AA), where he still volunteers one day a week.

The 1998 division awards will be officially conferred at the Atlantic Division Convention, held in conjunction with the Rochester, New York, Hamfest on May 29-31.--Kay Craigie, WT3P

IN BRIEF:

* This weekend on the radio: The ARRL VHF/UHF Spring Sprint for 50 MHz and the EU Spring Sprint (CW) are on deck for this weekend. Just ahead: The ARCI QRP Hoot Owl Sprint (CW), the Texas QSO Party, and the Memorial Day CW Sprint. See May QST, page 96, for details.

* Correction: Thanks to Michigan TC Dave Smith, W8YZ, for pointing out that the NOAA solar forecast Web address we published last week contained an error. The correct URL is http://www.sel.noaa.gov/forecast.html.

* Vanity update: The FCC in Gettysburg reports it has completed processing of vanity call sign applications received through April 22. In the processing run May 11, there were 52 grants. Another 76 applications landed in the work in process (WIPs) stack.

* RAIN report off TWIAR feed: The Albany, New York-based ham radio news service, This Week in Amateur Radio, no longer carries The RAIN Report prepared by Hap Holly, KC9RP, as part of its regular satellite feed. The end of the five-year informal working agreement between the two services was due to "contractual and philosophical differences over Internet audio availability," said TWIAR Technical Director George Bowen, W2XBS. TWIAR Executive Producer Stephan Anderman, K2SMA, says that the two services remain on cordial terms and will share a booth this week at the Dayton Hamvention. By the way, TWIAR has a new Web site, http://www.twiar.org.--This Week in Amateur Radio

* Shannon Lucid article: Russ Tillman, K5NRK, reports that the May issue of The Scientific American contains a 10-page article entitled "Six Months on Mir," by Shannon Lucid. The article mentions that Lucid kept in contact with her family via a "ham radio packet system."--AMSAT News Service

* Public service conference series: The first of a series of regional public service conferences will be held May 30 at Seaside, Oregon, in conjunction with the Northwestern Division Convention. Regional served-agency representatives and ARES officials will discuss needs and capabilities. They will be joined by Field Services Manager Rick Palm, K1CE, and Gary Gilham, of the National Red Cross Headquarters disaster operations center, where Gilham is a communications coordinator. A second conference will be held in June 20 Atlanta, in conjunction with the Georgia State Convention. Palm and a National Red Cross rep also will attend.

* QSL tally reflects better propagation: The ARRL Outgoing QSL Service reports the number of cards it's forwarded to DX stations around the world so far this year is up by 40% over last year's numbers. That could be a reflection of overall better band conditions on HF. As of May 1, the service had mailed 600,100 QSLS (more than 66,000 of them on May 1 alone). That's an increase of 173,440 cards over the same date last year.--Martin Cook, N1FOC

* WPA Section Awards announced: Bill Kristoff, N3BPB, has been named ARRL Western Pennsylvania Section Amateur of the Year. A ham for 18 years, Kristoff is active in training, coordinating technical assistance, and public service. Other Western Pennsylvania awards announced this week were Gordon McDonnell, KB3AQA, Section Educator of the Year; Frank Rossi, N3FLR, Section Technical Specialist of the Year, and Greg Kerr, N3PHF, Emergency Coordinator of the Year.--Bill Edgar, N3LLR

* New York City RACES gets "hambulance" After months of sensitive negotiations, the New York City Radio Amateur Civil Emergency Service (RACES) finally has its own field communications vehicle. The 1988 Chevrolet

ambulance was recently decommissioned as a medical transport vehicle and declared surplus. "Its current odometer reading is 000,067 miles, and we are still trying to determine how many times the odometer has been around," said Citywide RACES Radio Officer and PIO Howard Price, KA2QPJ. NYC RACES District Radio Officer Marc Kaufman, WB2DWC, brokered the acquisition with help from Price. The vehicle now is being readied for refurbishing and eventual official designation as a RACES FieldComm unit. The "hambulance" will also retain its emergency lighting and signaling package to protect its cargo and occupants. NYC RACES expressed "profound thanks" to the city officials involved "for their extraordinary efforts in procuring, outfitting, sheltering and maintaining this vehicle for use by NYC RACES."

* Submarine event a success: Jim Flanders, W0OOG, says he considers the recent Submarine Memorial Radio Room Reactivation (SmR3) "a success beyond all expectations," despite problems from a solar storm and QRM. "Nine submarines were successful with their operations," he said. "Pictures are starting to come in to me, and I'm displaying them on the Amateur Radio part of my Web page, http://www.flash.net/~jflandrs. Flanders says he's written an article for the Naval Historical Ship Society. "All these subs are a member of that organization," he explained. He's also writing an article on the event for the Submarine Veterans Amateur Radio Association (SVARA) publication, Tubes Forward.--Jim Flanders W0OOG

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

2318. Re: (More) Defending 10 Meters

>I'd rather move up the band and enjoy a QSO than waste my
>time jamming.

I fear you have misunderstood the situation somewhat, perhaps because of your experience on 75 Meters.

This is a case where we are asking folks to select one of the CB "Channels" when the call CQ.

If they find interference and can do so, we encourage the "Bulleting Sending" because experience shows it works very well. I realize there are many hams who can barely squeeze in some operating time now and then. And there are many who have to stretch to buy another accessory for the shack.

Fortunately, however, there is a band of operators around the US who have the time and money help in defending our bands--10 meters and otherwise. We are attempting to recruit more of these. The purpose of the postings was not to engage in a debate over whether the techniques work; we know from experience that they do. We simply want to recruit more folks to the project. However, thank you for your comments, and good luck in the contest.

73,
Paul K5PF

Bill,
The ARRL Antenna Book sez there is a direct relationship between frequency and signal refraction in the atmosphere, with the effect becoming noticeable in the 10 meter band. The primary factor is the water-vapor gradient, and the vertical temperature gradient is secondary. What's the source that gives the opposite answer?

ARRL Bulletin 33 ARLB033
From ARRL Headquarters
Newington CT May 14, 1998
To all radio amateurs

SB QST ARL ARLB033
ARLB033 Local CB enforcement bill passes Senate

A bill giving state and local governments the power to enforce federal regulations covering illegal CB transmitters has passed the US Senate. Senate Bill 608, introduced by Wisconsin Sen Russell Feingold, was incorporated as an amendment into S 1618, the Consumer Anti-Slamming Act, approved May 12 on a 99-to-1 vote (Sen Biden not voting). The measure, as redrafted from the original bill with assistance from the ARRL, totally exempts Amateur Radio from its provisions.

The measure requires the FCC to provide technical guidance and includes an appeals process.

It's not yet known if or when the entire bill will come up for a vote in the House of Representatives.

In remarks read into the Congressional Record of May 12, Feingold spoke about his cooperation with the ARRL and with hams in Wisconsin and said the amendment incorporates a number of provisions suggested by the League.

''First, the amendment makes clear that the limited enforcement authority provided to localities in no way diminishes or affects FCC's exclusive jurisdiction over the regulation of radio,'' he said.

''Second, the amendment clarifies that the possession of an FCC license to operate a radio service for the operation at issue, such as an amateur station, is complete protection against any local law enforcement action authorized by this amendment.''

Feingold pointed out Amateur Radio's tradition as a self-regulatory service. ''The ARRL is very involved in resolving interference concerns both among their own members and between ham operators and residents experiencing problems,'' he said.

Feingold introduced his original version of the bill nearly two years ago after receiving complaints from constituents about interference from illegal CB transmitters. In 1996, the City of Beloit, Wisconsin, passed an ordinance giving the city the power to enforce FCC regulations concerning CB interference.

Ladies and Gentlemen --

This weekend will be the annual military-to-amateur crossband operational test. It starts at 1300Z (0900 EST) on Saturday. Full details in the May 98 QST, page 107.

As in the past six or seven years, I'll be operating the Air Force's "big station" AIR at Andrews AFB beginning at 1300Z until.. Listen up on 14408, I'll announce where I'm listening frequently, it will be in the general class portion of 20 meters, somewheres around 14295. If you've worked AIR in past crossband/armed forces day operations, you know that we're not limited to a receiver/transmitter on the east coast.

Ya'll show up now, hear ?

jd

Sorry to take up room here guys, but you have seen my ads and trades on this board for a long time. I have a reputation for giving you what you paid for, and making it right if you were disapointed. Well, take a minute to look at something I am involved with. This is why I haven't had much time for Ham Radio lately.

How many times have you heard someone say" Wish I had bought WalMart stock"? Or micro soft, or Coca Cola, etc. I have found a company that has a chance to be the WalMart of the next century!! This is for real, and I believe enough to have invested hard earned, and I do mean Hard Earned, money. Take a minute to check it out, and if you aren't interested check the online prices for computers, etc. They are quite good. Tnx, and 73's. Bob Ruge.

2332. FS: Johnson Viking Challenger, Morse Key & Manual

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-14 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6jdhj7$3bd$1@nnrp1.dejanews.com>
Source record: 172332

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

Owned by non-smoker, so the meters are pure white and not
yellowed as one usually would expect with old boatanchors.

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider all offers on the unit over $150 plus shipping.

Thanks.

2334. FS: Two Collector Quality Hammarlund Radios

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-14 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6jdhov$3f9$1@nnrp1.dejanews.com>
Source record: 172334

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept and collector quality. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x: I underexposed the camera and will have to retake photos. Once someone sees the super condition. I hope it will move quickly. Purchased off the gentleman directly who owned it. He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $250 or b/o plus shipping costs.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-1.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-2.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only thing I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced. Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself.

HQ-170 & Matching speaker $400 or b/o plus shipping. I realize both prices are on the high side, but these unit's physical condition are really nice.

Thanks.

Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA.,
U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit cannot be told from new and is in amazing condition.
It even has the original box with it. One person advertised this
unit for $325 in similar super condition and I have seen them for
$65 as well in decent condition.

Wish to get $200 or b/o plus shipping due to the wonderful
condition of this unit.

Thanks.

Hi, Casey. The REST of the story is that everyone got tired of putting up with his garbage, so we came to a gentleman's agreement that we would not respond to his posts, no matter how irratating they were.

It drove him crazy! No matter what he said, nobody answered. It's kinda like how you handle a bootlegger on your 2 meter repeater! Meanwhile, we were laughing behind his back (via e-mail). It was priceless, believe me!

As with stray dogs: If you don't feed them, they go away. He has since moved on to another NG, where (this may be hard to believe) he is behaving himself and actually making intelligent contributions to the discussions.

Bad form old man, does anyone get the picture here? By QRMing a CB'er or pirate station your only creating MORE QRM for your fellow amateur. If the pirate is in the caribean or south america and has propagation to the east coast, by jamming him your could be creating QRM for a station in the mid west who doesnt even hear the pirate! This is the worst imaginable way to deal with this problem.

All GRE-made scanners that had/have cellular
capability in the first place. Also some,
if not all AOR scanners, and possibly some
Icoms. WiNRADiO also does 30 kHz steps.

Uniden never made a 30 kHz stepped
scanner, I don't believe.

Ridiculous. The QST he wrote would only take 30 seconds to send. If
you can't give way for a 30-second QST, considering the tremendous
benefit that could possibly result (illegals get run off), then you're
very short-sighted. Any serious 10m regular would surely understand
and welcome such an announcement.

Have they dropped all the cw split freq QSOs ?

2366. YAESU FT-1000MP

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-15 00:00:00 UTC
From: rj3@earthlink.nospam.net
Message-ID: <355c5ee5.705542@news.earthlink.net>
Source record: 172216

One more warning for any prospective FT-1000 buyers...I spent $2700
plus tax for one of these, and promptly returned it.....

The FT-1000 has 2 VFO's, EDSP, (not very impressive) BUT it is very
sensitive to antenna SWR and impedance.. EXTREMELY unforgiving,
compared to a KENWOOD or ICOM on the same antenna.....

I use a 40 meter half-wave dipole cut for 7.1 Mhz. at 51 ohms
impedance... This loads great on a 440AT and an ICOM 706.
(On ANY portion of 40, 30, and 15.)

The FT-1000 will only load around the 7.1 Mhz. range.....It will not
load properly at the low end of the CW portion of 40, nor will it load
properly at the high end for phone operation... When brouhgt into
Yaesu for a check, I was told it was O.K., and needs a very good
antenna with an SWR of LESS than 3:1....!! Now mind you, this
is NOT the case with my Kenwood or Icom!!
(Boston and Los Angeles.)

Later, it was suggested I use a seperate antenna for the low end of
40, and a different antenna for the high end of 40!! Preposterous!
(A direct quote from John Linn of Yaesu..)

After I picked this radio up a few days later, I received a letter
from Yaesu, saying it worked fine with an SWR of 5:1 !!!!! <----
(Go figure....GOING AGAINST THEIR ORIGINAL EXPLANATION.)

In any case, this is not the radio for me... If I want a $2700 radio
with all the bells and whistles, I would expect the same or better
operation than I get from KENWOOD and ICOM, that work
PERFECTLY on this 40 meter dipole not only on 40, but 30 and 15
meters!

These notes for your consideration if looking for a new HF rig.....

>
>Hi Tim,
>Good idea, except how would you legally transmit such bulletins on those
>frequencies which the law-breakers are using (non-phone segments of 10m)?
>CW, RTTY, and digital would be Greek to them.

Well Jeff, try reading USCFR 47 Part 97 111(b) for the answer. Anyone licensed to use the frequency can send code practice for those learning or updating code skills, and I note that information bulletins such as a year long listing of hamfests along with road instructions and whom to call sent on a digital mode is also lawful. Now Jeff, tell me, just how can an unlawful user have standing to complain to the FCC or other authorized federal enforcement about interference caused by a lawful user? Doesn't that user have to admit in effect to carrying out illegal actions before making the complaint? The usual rules apply, for example not interfering with other lawful transmissions, but bootleggers by definition aren't lawful transmissions or if somehow using Part 15 of USCFR 47, are required to accept any and all interference from other lawful users and required not to interfere.

It would be interesting to see the F.C.C. for example trying to revoke or suspend the license of someone sending code practice or informational bulletins because a bootlegger was interfered with, but it's also not likely to ever happen. Getting a Notice of Apparent Liability enforced would be even more difficult and also without lawful basis. One has to have legal standing to be harmed or appear in any matter, and a bootlegger can't have legal standing.

>assertion that morse is "stopping growth".

Let's see, the coded licenses are barely keeping up with deaths and
hams letting their licenses lapse, and even the tech growth
rate has dropped, but it is the only thing growing. Unless you want
to claim that techs aren't hams, newcomers aren't choosing to learn
or use CW as a statistical measure.

Since you're trying to ask difficult questions, do you have any evidence
that morse code is helping ham radio numbers grow in these United
States?

I wonder if you just had a unit with a bad tuner. When I first bought
my FT1000D, I had to return it to the factory twice because the tuner
kept blowing out. On the third return they finally got it right, and now
I can tune a coathanger with the thing.

I heard 440-450 MHz was allocated (?) to commercial services in the US
as a primary basis.

I am glad. I strongly suggest gov't to take our freq off since not
many people are interested in amateur radio anymore (ie. stupid
argument know code = know ham). 30m band is also a good one. Just
take it away.

I am sure "majority" of people in the US support the reallocation of
amateur freq such as 440 band to the commercial people. Hey, we are
majority !!

Going to put up an inverted EL for 160 meters and I am in need of a couple of air variable capacitors of around 300-400pf each. Smaller value ones will also be considered as I can just parallel up what I need for more capacitance. Close spacing should be ok as I will be running under 100 watts. Please email me with what you have and your asking price.

Hey Potato(e)head, KK7HO,

This doesn't have anything to do with
operations on 3950. It has to do with
Part 97 of the ARS rules, which defines
the Service as one for emergency
operations.

Clinton seems to have signed the orders
for illegal jamming at WACO, not necessarily
on 3950. If he didn't then the FBI operated
outside of the law at Waco, and the FCC
helped them. What authority does a bunch of
illegal jammers have to issue licenses to
us.

If you are concerned about NAZI's using your
precious spectrum, then get the FBI off the
amateur bands.

>KK7HO wrote:
> The "So Called" liberty nit thinks that
> only "they" can use 3950 and jams......

KK7HO hurts the Amateur Service by showing
that he is ILLITERATE. I haven't even listened
to 3950 in some five years because of all the
jamming and QRMing by dipshit socialist.

If you hate this country so much, then use the
ammunition at:
http://www.atlcom.net/~geozim/index.htm
to clean the Oval Office, the Speaker's
chair in the House of Representatives,
and the Congressman's Office in the 7th District
of Georgia, and the 6th District as well. Make
changes, quit your bellyaching and get your ass
in gear. Even if you replace these clowns with
your communists friends you could not possibly
do any worse than what we have now. Any move is
a winner, if you can get off you ILLITERATE ass
and actually do something. Gingrich is up for
re-election in November.

Newt is my congressman and I vote for the
Democrat opposition every time, does that

make me a NAZI or a ?socialist? Who cares, as long as Newt bites the dust on election day.

DE N4XDC

2386. Did jammers issue your license?

Newsgroup: rec.radio.amateur.misc

Fellow Radioexperimenters,

Look at your ham ticket, does it have the
words "Federal Communications Commission"
on it? Then read the evidence at:
http://www.atlcom.net/~geozim/impeach.htm
to find out if jammers issued your license.

Follow the links to the FBI letter to the
Speaker of the House of Representatives.
Find out how the FCC illegally jammed the
Amateur Radio Service, probably under
orders of President Clinton. If not under
orders, then illegally.

Most hams would not care where their licenses
come from, even if David Koresh himself signed
it. But those with some integrity will want
to know the truth, and THEY HAVE A RIGHT TO KNOW.

DE N4XDC.

The original Radio Shack 2006 is one that is easily modifiable and scans in 30 KHz steps. One of the reasons they still demand a premium price on the used equipment market, I suspect.

Hi Tim,
Good idea, except how would you legally transmit such bulletins on those
frequencies which the law-breakers are using (non-phone segments of 10m)?
CW, RTTY, and digital would be Greek to them.

Does anyone know of a suitable PLL synthesiser PCB/module to replace the crystals
in the Philips FM828 series UHF transceiver? The radios are cheap but a set of repeater crystals are not!.

Alternatively, can anyone recommend low cost (and readily available) PLL synth chips for VHF or UHF. I know of the Motorola MC145xx series but they can be difficult to get.

Hello, I'm experimenting with setting up an Email callsign server. If you would like to try it, send a message to qrz @ mibbs.xg.com
Subject doesn't matter, first line in Body of message should be the callsign of the person you want to lookup, or up to 4 or 5 callsigns at a time separated with a space between each callsign, ie; ka8xx n8xxx kc8xxx and so on. I don't have the latest callsigns (April '97) as I am just tinkering. Lemme know if it works for you. Thanks..

-Jeff

I agree totally. Last week my family and I were at the range practicing with a variety of weapons, including some hi/cap pistols and assault weapons. A jerk, of which there are many in society, started bellyaching to another patron about my wife. She was practicing for self defense, having twice been a victim of repeat rapists let out by liberal leftwing laws. Rather than the four members of my family, heavily armed, approach this twerp, we packed up and left. We could've easily overpowered, outshot, wasted, toasted, turned him into swiss cheese like the left wing liberals say we will. I had feelings of sympathy for the jerk, thinking it was his world and should rotate to his beat like the left wing twerps do. By "FORCING" his will upon others, he demonstrated his small person. I think he was intimidated because she was obviously shooting so much better than he was. It did not once cross my or any member of my famies mind, to defend our "southern culture" honor by shooting him.
Only the crimal element that might try to invade our privacy again, have antything to worry about. The normal every day citizens and jerks we encounter everyday will never see my firearms. Try to take anything from my family, be it sex, or property, including my firearms, and the shit will hit the fan.
One last point, neither of the men that assaulted my wife had weapons. The second went on to rape another young woman, and kidnap and rape a young girl. My wife claims had we owned a firearm, she had several opportunities to stop the second, before he went on to do his other deeds. He left the room then came back in and paused for 3 or 4 seconds looking at her on the phone to 922, before attacking her and ripping it out of her hand then beating her down. Had that phone been a gun, perhaps 2 other female victims would've been spared thier horrific tragedies. Several shots can be fired fairly acuratly from 10 to 12 feet in 3 or 4 seconds by just pointing and shooting. I dont want to hear a lot of crap about criminals turning the weapon on the victim. She readily admits the first rapist didn't give her the opportunities the second one did. Another point more criminals are shot each year by victims than by police.
To expound even further, per Justice files, 1,871 women are raped each day in America. Thats over 600,000 per year. 1 out of 4 women will be raped in thier lifetime. Per world almanac in 1996 19650 murders were committed, thats all murders including stabbings, vehicular, poisoning, clubs, hammers, etc... Had even 1/4 of the rapes committed during the same time been detoured by a CCW law, even if they didnt shoot thier attacker, the pluses would have far outweighed the minuses. 1/4 of 600,000+ is 150,000+. I begin to wonder how many murders would've been prevented that year by more liberal(UGH) CCW laws.

Be fore warned vile predators, by the end of this month my wife will be a legally armed citizen. Due to the extravagant state and training costs, I have to wait till next month to legally carry. If you can find me between now

and then you might stand a chance. no guarantees, I might be carrying illegallyu Muahahahahaha.
A final note, if your just some jerk that cuts me off on the way to work, or almost runs me into an 18 wheeler, you have no worries, except maybe to see my middle finger. After all none of you has seen my firearm yet have you???
Bill

Hi Steven. I am a Tosh owner... currently I use a 200CDS... has SB compatible sound, cdrom, external floppy. I actually seem to have LESS interference than with a regular desktop. The monitor seems to be the noisiest part of the computer and that big CRT really can dish it out. LCD doesn't seem so bad.

The only problem I have, which I had with an earlier Tosh pentium notebook also, is that the HAMCOMM interface doesn't work nearly as well as it did on the old 486 and faster 386 class machines. An external power supply for the interface helps, but it still doesn't work as well as I would like. For other uses it should present no problem. My HF rig currently is about 5 feet from my computer, no shielding between them, and I am using an end fed wire with radials on the floor. A noisy omputer would probably give me fits. I can tell, sometimes, that it is there, i.e. when I am listening to BBC and I start a program that really gets some spin time on the hard disk I hear a little faint static.

Any cable connecting your computer and your rig (my "big rig" is a TS-50S) should be made with shielded cable and have a couple of ferrite beads or a couple turns through a toroid. An iffy ground like mine could prove inadequate at times. simple proximity to your computer shouldn't bother your rig much, though.

Very nice post, Bill, and I heartily commend you and your wife on taking steps to help prevent becoming victims/statistics again. Honest men and women should not be required to meekly suffer at the hands of those who victimize those they percieve as helpless just because they can, and want to.

Yeh I agree there is a horse's behind in every crowd, and I think you met yours that day at the range. A gun is a "man's thing" and there are those who might feel inadequate or feel their manhood challenged by a woman who shoots well. Truly, a gun IS the great equalizer. Few other forms of defense are as "democratic" as the art of pistolcraft. Practice, proper care of the weapon, and a resolute will can completely negate an adversary's advantage of size, strength, youth, experience in crime and mayhem, or lack of scruples. Decent people can actually have an advantage over the criminal if they prepare themselves as you and your wife are doing.

Speaking of feelings of inadequacy, I bet the next dirtbag who tries to harm your wife feels HIS manhood threatened, too, among other things.

Ouch! Hey, my tripe is not liberal! Burt's and Ian's was the liberal tripe. I'm a proud supporter and defender of the constitution, including the Bill of Rights, and legally carry my .45 practically everywhere I may legally do so.

2399. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6jgqq2$lti@news.Hawaii.Edu>
Source record: 172301
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I agree with you that we need to be careful that an attempt to run illegal operation of 10M, as you say the propagation up there is such that QRMing illegal operators may have no effect whatever on them, yet cause harm to licensed operators. However, in some instances using semi-QRO CW can drive the bootleggers off. In NYC recently, hams drove legions of cabs of 10, using this method. They had been using modified CB rigs. The NYC Taxi & Limousine Commission jumped on the bandwagon later, after the FCC asked them to investigate complaints made by local hams about the illegal transmissions. Now the NYTLC randomly and without warning drops in on cab companies and looks their radio gear over.

2401. Cool Special Event!

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-15 00:00:00 UTC
From: "Daniel B. Mills" <millsd@river.it.gvsu.edu>
Message-ID: <Pine.HPP.3.95.980515064120.22331D-100000@river.it.gvsu.edu>
Source record: 172303

Hi All,

At W8GVU, we expect this to be a pretty cool special event. The gimmick with the clock tower might even get us in QST. BTW.. it works. We've made contacts on it already.

Special Event: National Science Olympiad

When:
May 15 and 16, 1300 - 2100 UTC both Friday and Saturday.

Where:
7.290, 14.265, 21.365, 28.365 MHz. VHF frequencies will be announced. Packet and satellite links will also be announced.

Why:
To commemorate the High School Science Olympiad National Competitions, which will take place at GVSU this year.

For more information:
See <http://www2.gvsu.edu/~w8gvu/event.html> or email <w8gvu@river.it.gvsu.edu>.

On Friday we will be operating maritime-mobile from aboard the W. J. Jackson and the D. J. Angus research vessels on Lake Michigan. On Saturday we will operate from the base of the Cook Carillon (clock) tower, actually using it as our HF antenna!

SASE for Certificate:
W8GVU Amateur Radio
115 Kirkhof Center
1 Campus Drive
Allendale, MI 49401

73 (International Morse Code abbreviation for "Best Regards")

Daniel B. Mills, N8PPQ/W8GVU

Date: 1998-05-15 00:00:00 UTC
From: k5pf@aol.com
Message-ID: <1998051511041800.HAA12290@ladder01.news.aol.com>
Source record: 172304

As you probably have heard, there is a proposed rulemaking before the FCC which would virtually wipe out the second most popular Amateur FM band. The best way to defeat this is with a massive letter writing campaign. And there is not much time. Reproduced below (from Newsline) is the Proposal's number, the address, and the critical date. Consider writing TODAY.

The commentary cutoff date on RM 9267 is June 1st. This leaves precious little time for radio amateurs around the nation to react. Those responding must be certain to reference RM 9267 at the top of your letter. Send comments to the:

Secretary
FCC

I am in need of one of those simple el Cheapo inline SWR bridges. The rectangular unit with SO-239's on each end and some of them could even be used as a FS meter. They had one knob to set the forward power and then a switch to read reflected. I need one that will go up into the VHF band and as I recall most of these units would read from 3-150mhz. They sold for around $19.95 new. Anyhoo that's what I need. Email me with what you have and a price.

2405. Please HELP with new Bencher BY-1 paddles!

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-15 00:00:00 UTC
From: see.reply-to@address.com
Message-ID: <FDDD06E174298399.0AB3DA5E626D82D2.8C960D6AC06C657A@library-proxy.airnews.net>
Source record: 172307
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am new to the HF world, and have a Yaesu 901dm.
I purchased a Bencher BY-1 paddles over the net, ready to hook into my "built in keyer" on the radio. The salesguy from HRO assured me you just hook the paddles into the radio and you're CW'ing within minutes.

I open up the package, and ... NO WIRES!
The paddles are just stand-alone.

So my obvious question is: How do I hook the paddles into my radio?
There's a phono-type plug in the back of my 901dm for a "straight key or paddles", and some contact leads at the bottom of the paddles.

Do I need to head for my local Radio Shack and buy some kind of wire-set?

Please help!

This is today's Daily Blowout Special.

These daily specials will be updated every morning on the "Specials" page of our website

http://www.valuetronics.com

The special for Friday, May 15 is:

Tektronix AM503 Curent Probe Amplifier $275.

The below listed equipment is also available at the listed price:

Hewlett Packard 6264B 0 - 20 VDC, 20 Amp Power Supply $195.

These instruments will be available for immediate delivery with your credit card purchase. No accessories will be supplied or warranty implied or offered. We do offer an unconditional 5 day right of refusal on these specials

For more information, please call:

ValueTronics International, Inc.
Schaumburg, Illinois

Anyone every told you to RTFM?

>Do I need to head for my local Radio Shack and buy some kind of wire-set?
>

I don't know about the 901dm, but most rigs need a 1/4" stereo phono plug.
You'll also need about a 4' chunk of 3 conductor wire. After you RTFM, you
should know what to do with them.

ARLP020 Propagation de K7VVV

ZCZC AP20
QST de W1AW
Propagation Forecast Bulletin 20 ARLP020
From Tad Cook, K7VVV
Seattle, WA May 15, 1998
To all radio amateurs

SB PROP ARL ARLP020
ARLP020 Propagation de K7VVV

Conditions certainly calmed down this week. Not only were solar flux and sunspot numbers off, but the most disturbed day, May 8, only had a planetary A index of 20.

W9JJ wrote to remind us that during recent geomagnetic storms that wiped out HF there were many interesting periods of propagation on VHF due to auroral activity. He also passed along some late word from WB2WPA in Florida about 2 meter signals from South Dakota and Minnesota, and also a report from N0JK about 2 meter exchanges between the Midwest and Cuba,

For the next few days no geomagnetic disruptions are forecast, with A indexes over the weekend around five. The solar flux for Friday through Sunday is expected to be 115, 115 and 110.

Solar flux may dip below 100 around May 18 or 19, and we could have geomagnetic disturbances around May 22 to 24. May 23 should see solar flux above 110 again and above 120 around May 25 and peaking just below 130 by the end of the month.

Sunspot Numbers for May 7 through 13 were 82, 81, 56, 61, 72, 90 and 90 with a mean of 76. 10.7 cm flux was 123.3, 118, 110.7, 107.2, 108, 112.1 and 116.6, with a mean of 113.7, and estimated planetary A indices were 13, 20, 12, 11, 13, 19, and 6, with a mean of 13.4.

> Puck

Hey, Puck... I know the feeling.... I used to work the USCG/NMN crewe
all the time, but IF noone is doing CW, anymore, much of the fun and
camarraderie is gone. The crewe at NMN could run some mean CW,
second to none, for sure.... but they did it for a living, then.
I will miss the music of Sergio or Burly on the sending irons.....

In tribute to them.....

ZUT, and may they have fair winds and following seas...

You've been around long enough to know that you don't need to know code to be a ham. And, you're in no condition to be calling anyone stupid. You don't have to know code to use the 70 cm band. It's a great place for hams that don't want to learn CW.

2414. The real hams fox hunt

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-16 00:00:00 UTC
From: Burt <burt@innocent.com>
Message-ID: <6jmeoddtj1@as1000.javanet.com>
Source record: 172117

In keeping with the spirit of the CQ-VHF National Foxhunting Weekend, the Santa Barbara Amateur Radio Club will be holding an International Style ARDF Foxhunt on Sunday, April 26th.

> This hunt will take place on foot and involve hunting for a total of five 34 year old 115 pound girls.

Each girl will be on for 1 minute and off for 4 minutes in sequence so that only one girl will be active at any given time. Each participant will have a total of 120 minutes from their assigned start time to find as do as many girls as possible. The hunt will take place on the Lake Los Caneros property just north of Santa Barbara and will start at the Stow House parking lot.

There will be two classes, Beginners, and Advanced. This will be a fairly easy hunt with our main objective being to introduce hams to females. The hunt is open to everyone and talk-in will be on the K6TZ repeater (146.79(-), pl 131.8.)

> KD7BFX

Yes, and I also agree with the above, and one would hope that this jamming of the NYC cabs was done at night when the band was shut down, the only part that got my goat was to just blindly start jamming or transmitting bulletins without 'thinking' first about whether the band is open to somewhere else, or who I may be creating QRM for. I'm not totally opposed to
the suggestion but rather the way it was presented. Without conditions or consideration for the side effects.

Most of the Cheap units dont work to well on VHFInfact most of them only
work "well" on the upper portion of HF (say 20 mhz to 30 mhz)
There are a few Cheap VHF/UHF units out there, the one Radio Shack carried
had
no adjustment for setting callibration on swr All it had was a power sw (5w
15w)
and a SWR/Power Sw. If I remember they were about $30 new

Now Curtis, you know that's not fair. Think back to just last week. You were allowed to engage in a lengthy QSO towards the end of the Net. We asked you questions, you answered, you asked us questions, and we answered. Nobody jammed you. Anyone who was monitoring The Great Liberty Net of 5/9/98 can confirm this.

Please get your facts straight ... 30 days for comment and 15 days for reply
commment is THE NORMAL period ... there is NO indication that the FCC has
done anything other than what they are REQUIRED BY LAW to do ... which is
put the Petition out for public comment.

A bunch of rednecks going off half-cocked and writing/encouraging others
to write nasty lettes to the FCC will only HURT our cause ...

PLEASE people ... if you want to save 420-430 and 440-450, file CALM,
SENSIBLE, WELL-REASONED comments with the FCC on why they should NOT
reallocate those bands as the LMCC has asked.

One of the most sensible reasons would be that the mobile radio folks
have done virtually NOTHING to seriously implement the narrow-band
technologies they are required to adopt under the FCC's recent "Spectrum
Refarming" initiative ... moving forward with that (instead of simply
demanding more NBFM channel space) would give them up to 4X the number
of channels they now have. They shold "give at the office" before they
seek to become charity cases at our expense.

Anyway ... one more time ... the FCC has only done their job so far.
They have not "screwed us" by putting the LMCC proposal out for comment,
they had no option but to do that. Let's not piss them off by flooding
them with nasty letters ...

Our 70cm band will survive regardless of what the Washington crooks and their high-dollar lobbyists on Capitol Hill decide to do. There are literally thousands of active amateurs on this band. Do you think we're going to throw our radios away and cease operations, simply because the government has stolen our frequencies away from us? I seriously doubt it. LMCC will not even want these frequencies when they realize the enormous amounts of QRM they will have to endure from angry amateurs whom have been sold out by the government.

No way, Jeff. Impossible. For Burt to be the father, there had to be a mother,
and the mother and father would have had to have met face to face, and she
would have had to have liked him at least a little bit and they would have had
to.... naaaaah.

Burt, if you're gonna troll, at least use some fresh bait. We seen this
already.

By the way, a good effort on your page. You would get more hits, tho, if you
streamlined it a bit. I cooked myself some breakfast while your page was
loading, and got quite a bit of it eaten. I only followed up on one link
because your page takes so long to load up. Even a man of leisure can't spend
ALL day on the web, especially at one site. Check mine out. True, I don't put
as much stuff in there, but check how fast it loads. My background is only a
2Kb GIF file. Feel free to ftp download my html file if you want to see how it
is done. Anybody who wants to can use bits of code from my humble page with my
blessing, even you.

I think it helps to make all cables out of the curly type wire. This is much more resistant to abuse, while there isn't so much slack cable hanging around you.

My ptt switch (factory made, Eggler's Headset) is located on the bar with velcro, but there is no need to take it off prior to landing; it can stretch to the point where the bar is on the ground and I stand.

Such a harsh critic online, I guarantee Burp wouldn't have the guts to appear on the net tonight. How about it, Burp? We'll be listening for K1OIK on The Great Liberty Net. The silence will be deafening.

Please give a few examples. You cannot, because there are none. Editors could care less about your beef with the ARRL and, sadly, about ham radio in general. Your "letter" is of absolutely no interest to the general public. It's inclusion would not help sell newspapers. Nobody cares.

Hey Thrower, why don't you tell us why you are no longer on HF? I brought this up last weekend and you told me it was because you had sold all your HF equipment. But then when I asked the question WHY you were no longer on HF, all I got was your usual stammering and sidestepping. You want to tell the story or should I?

He couldn't go to university because his family didn't have enough
money and there were/are no things such as scholarships.

He learned/is learning English and German by himself and he is fluent.
He can fix/repair most of the electronic devices, but he didn't go to
technical institute or something.

My father learns a lot by himself and I learn a lot by myself.

How about if you start to learn something by yourself instead of
waiting someone to point you out what is right and what is wrong (or
not to realize until you start to learn from someone else)?

Well as usual Noda san, you COMPLETELY MISSED THE PUNCH LINE! The comment had NOTHING to do with your father going or not going to a University. You see, if you would have read Michaels post, he said "Welp, I gotta go ... Time to tap some more code on my wife's marsupial pouch -- I want this one to come out holding a bencher paddle!"

Translation - My wife is expecting our next child and in hopes of having a son or daughter who will have an interest in amateur radio he's going to send some morse code on his wifes belly.

Now understanding that, the question was "What was YOUR father doing while you were in the womb" Get it Masa? It's a joke son, don't cha get it? Masa, if your not interested in people telling you how stupid you are, try shutting up for a while.

Bill,
Just to muddy the waters a little bit more, I found another reference that
indicates the index of refraction in the atmosphere is independent of
frequency. So this says that the amount of ray bending would be the same in
all freq bands.

>Well Jeff, try reading USCFR 47 Part 97 111(b) for the answer. Anyone
>licensed to use the frequency can send code practice for those learning

Hi Art,
Apparently you didn't understand the point of my query. The outlaws
on the lower end of 10 most certainly won't be able to copy your
Morse bulletins to them. Neither will they have the ability nor
desire to decode your RTTY or other digital transmissions directed
to them. You'd have to use AM or SSB, but using either of those modes
would then make you too a law-breaker.

Tim's idea of sending informational bulletins containing club meetings
and such is very good but the dilemma is in getting that info to the
outlaws on the lower end of 10m. *That* was Tim's point - try to get
the outlaws interested in ham radio and invite them to club meetings. Now
do you understand?

>or updating code skills, and I note that information bulletins such as
>a year long listing of hamfests along with road instructions and whom
>to call sent on a digital mode is also lawful.

Nothing unlawful, but we're trying to determine how to direct that info
to the outlaws in order to get them interested in becoming hams. Again,
this is what Tim mentioned.

>Now Jeff, tell me, just how
>can an unlawful user have standing to complain to the FCC or other
>authorized federal enforcement about interference caused by a lawful
>user?

Don't forget that I was the first on this NG (that I know of) to pose such
a question to the FCC over the telephone some two years ago. Everyone
already knows (several times over) what the FCC's response was: "It's
impossible to interfere with an unauthorized transmission..." (para-
phrased: "We give you our blessings to transmit on frequencies that happen
to be in use by the outlaws").

I hope you now understand the direction of this discussion, Art.

Bravo AB5VH for giving this new ham a good straight answer. "RTFM" (first response in this thread) is too harsh an answer to give to a new ham who is humbling himself by asking a group this size for help. Please folks, remember when YOU were new to hamming....

Only thing to add is that the wires that go to the keyer paddle input of the radio attach to the little tabs (with holes in 'em) UNDER the Bencher paddle. Lightly crimp them as you figure out which wire is dit, which is dah, and which is common.

One more note, if it wasn't said above -- For a right-handed person, dits should be formed by pushing the LEFT paddle and dahs with the RIGHT.

I also concur that a new cw op should get a good feel for a straight key before sending with a keyer. This is DOUBLY true today, when many code classes teach how to copy but not how to send! Your rig should have a straight key input too. Once you get good with the straight key, start working with the keyer off the air. When you are ready, hook up that Bencher and go to town!

Dave, we welcome you to HF... particularly to CW.

Just a quick little ditty on Dayton as I unwind from the long drive home.

A great fest, I usually stay the weekend but other engagements prevented it. BLAZING hot sun which showed its face around 9:00 am and didn't really go away until 7:00 pm
Seemed to actually have some radio gear in the flea market portion, as opposed to previous years of tons o computer equipment. Heathkit gear seem to be in abundance.

Saw a nifty little Allied, tube CW transmitter, but at $95 I wasn't ready to start a museum.

Spent very little time inside, could not take the heat and the crowd, would have liked to spent more money inside.
In certain areas the heat was miserable. I think the HARA Arena has outlived it's usefullness for the hamvention. There are too many vendors inside without enough room or adequate air conditioning. I've never been to any other commercial trade show that is so crowded you can't move.

Bought some old 6m gear which I enjoyed using on the drive home, it was already xtalled up on 52.525 nice for $20.
Also bought the Alinco 'credit card' sized UHF rig for $111 out the door, it worked all afternoon and into the evening with a 45 min charge off the car battery that morning.

What about you?

Tim, ka8ddz

The type of wire isn't critical. Just don't route it right next to your radio antenna. I've made finger PTT's with several different types of cable, shielded, coaxial, twisted, etc; no noticeable difference. The headphone cable that the other fellow suggested works pretty good, but it's kind of delicate and also not easy to solder. Try to find something really flexible, with stranded conductors, and with a really heavy sheath, like the wire on some telephone handsets. Built to take that kind of abuse.

The only time I ever got an effect from the wiring was while flying in front of the radio transmitter tower clusters on Sandia Mt, Albuquerque, NM, where my radio would transmit in regular short pulses, even if the VOX unit was turned off. Solved it by adding a switch to bypass the little VOX/PTT circuit board built in to my helmet.

HOW TO CLEAN YOUR MOUSE
- Submitted by Paul45IA

This memo is from an unnamed computer company. It went to
all field engineers about a computer peripheral problem. Theauthor
of this memo was quite serious. The engineers rolled on thefloor.
Mouse balls are now available as FRU (Field Replacement Unit).
Therefore, if a mouse fails to operate or should it perform
erratically, it may need a ball replacement. Because of thedelicate
nature of this procedure, replacement of mouse balls should onlybe
attempted by properly trained personnel.
Before proceeding, determine the type of mouse balls by examining
the underside of the mouse. Domestic balls will be larger andharder
than foreign balls. Ball removal procedures differ dependingupon
the manufacturer of the mouse. Foreign balls can be replacedusing
the pop-off method. Domestic balls are replaced by using thetwist-off
method. Mouse balls are not usually static sensitive. However,
excessive handling can result in sudden discharge.
Upon completion of ball replacement, the mouse may be used
immediately. It is recommended that each replacer have a pair of
spare balls for maintaining optimum customer satisfaction. Any
customer missing his balls should suspect local personnel of
removing these necessary items."

2477. The real ham code

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-16 00:00:00 UTC
From: burt2@my-dejanews.com
Message-ID: <6jjr7e$8iu$1@nnrp1.dejanews.com>
Source record: 172253

The Radio Amateur is:

CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

February 20, 1998

Dear President Stafford,

You have not responded to my letter of September 27, 1997 where I questioned why I was removed a VE. I have not violated any provisions of 97.525 or any other aspect of F.C.C. regulations that govern this hobby. Thus unless you restore my VE status FORTHWITH I shall send the following letter to newspaper editors throughout the country (on a staggered basis). This is a threat. I believe fully in what follows. The only reason I have not written this letter before was I was not motivated to actually send it.

Dear Editor,

There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.

The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).

We have had troubles trying to find someone that carries a Motorola Microcontroller for a Repeater Controller motherboard we have here. If anyone knows where we could find someone that sells this part individually, or if there is any sort of replacement part I could use in its place, that would help out alot. The part number is:

MOTOROLA XC68HC16Z1CFC16

It seems this may be an older part, and may be hard to find. If there is anyone experienced in Microcontrollers that could even let me know if there is any more current part# that would do the same job as a direct replacement - that would also help.

Thanks for your time everyone..

..AND READ ALL OF THIS NOW!!!!

THE 440 MHZ (AKA 70cm) HAM BAND MAY BE UNDER ATTACK!!!! THE LAND MOBILE COMMUNICATIONS COUNCIL (LMCC) HAS FILED A PETITION WITH THE FCC TO TAKE AWAY MOST OF OUR 70CM HAM BAND! PLEASE READ THE REST OF THIS AND FOLLOW THE INSTRUCTIONS TO DO YOUR PART NOW, NOT TOMORROW OR NEXT WEEK, NOW! THE FOLLOWING INFORMATION HERE HAS BEEN COMPILED BY REQUEST FROM SOME MEMBERS OF THE MARS REPEATER. I OBTAINED ALL OF THIS INFORMATION FROM THE ARRL. IF YOU WOULD LIKE TO VIEW IT DIRECTLY FROM THEIR WEB PAGE, PLEASE GO TO:

http://www.arrl.org

ALSO NOTE THAT NON-HAMS CAN ALSO PARTICIPATE IN THIS SINCE THIS CONCERNS SEVERAL ORGANIZATIONS WHICH HAVE NOTHING TO DO WITH AMATEUR RADIO. THEY CAN SIMPLY EXPRESS THEIR OPINIONS AS A MEMBER OF THAT ORGANIZATION OR A POTENTIAL FUTURE MEMBER WHO APPRECIATES THE SERVICE AMATEUR RADIO PROVIDES TO THE COMMUNITY. REMEMBER, IF WE LOSE OUR FREQUENCIES AND YOU DO NOTHING TO INTERVENE, YOU CANNOT COMPLAIN ABOUT IT AFTER THE FACT. PLEASE ACT NOW!!!!

IF YOU HAVE ANY QUESTIONS, PLEASE CALL ME OR SEND ME SOME E-MAIL.

THANK YOU,

GEORGE SFAIR, KJ6TQ
http://marsradio.org

(THIS IS FROM THE ARRL'S HOME PAGE)

RM-9267: A Threat to Amateur Radio Interests

On April 22, 1998, the Land Mobile Communications Council (LMCC) filed a petition for rulemaking with the Federal Communications Commission to have two-thirds of the 420-450 MHz band (70 cm) reallocated to the Private Mobile Radio Service. The petition is designated RM-9267, and the FCC is accepting public comment until June 1, 1998. The ARRL opposes the LMCC proposal. The 70 cm band is very popular among radio amateurs, and plays a critical role in our ability to provide emergency, public service, and public interest communications. The ARRL believes that the LMCC proposal is incompatible with continued amateur use of the band. RM-9267 is still only a proposal, and has not been acted upon by the government. We need your help in communicating our concerns to policy makers as they consider how to handle the LMCC's request.

Frequently Asked Questions About RM-9267

What is the LMCC?

The Land Mobile Communications Council (LMCC) is a non-profit association of organizations representing users of land mobile radio systems, providers of land mobile services, and manufacturers of land mobile radio equipment. The user community includes public safety, business, industrial, private, common carrier, and land transportation radio users.

The membership of LMCC includes the following organizations:

Association of American Railroads (AAR)
50 F Street, NW
Washington, D. C. 20001
202-639-2100

American Association of State Highway and Transportation Officials (AASHTO)
444 North Capitol Street, NW, Ste. 249
Washington, D. C. 20001
202-624-5800

American Automobile Association (AAA)

Why are they seeking more radio spectrum for land mobile radio?

In response to a provision of the 1993 Omnibus Budget Act calling for regulatory parity among wireless Common Carriers and certain private wireless licensees that were providing service that was substantially similar to Common Carrier Service, the FCC developed separate definitions for Commercial Mobile Radio Services (CMRS) and Private Mobile Radio Services (PMRS). LMCC members mainly are interested in PMRS. They claim that the FCC is favoring CMRS over PMRS because CMRS licenses can be auctioned, generating substantial revenues for the Federal Treasury.

What is the actual proposal, and how would it affect Amateur Radio?

Based on its own spectrum requirements analysis, LMCC claims that the future additional spectrum needs of the PMRS community are as follows: 15 MHz by the year 2000, 44 MHz (i.e., another 29 MHz) by 2004, and 125 MHz (i.e., another 81 MHz) by 2010. It proposes:

Immediate needs be satisfied by a reallocation of 420-430 MHz, paired with 440-450 MHz, from Federal use to PMRS;

Immediate/mid-term needs be satisfied by FCC allocation of 1390-1400, 1427-1432, and 1670-1675 MHz to PMRS, pursuant to its reallocation to the private sector from the government;

Reallocate 85 MHz of the aeronautical band, 960-1215 MHz, to the PMRS by the year 2010 to satisfy longer term needs, shared with the developing DOD JTIDS/MIDS service.

At present in the United States, the Amateur Radio Service is secondary to military radiolocation (radar) in the 420-450 MHz band. Originally a primary allocation, secondary status came about during the 1950s when Cold War concerns made national security a high priority. Limited non-government, non-amateur use of the band is permitted -- but amateurs have priority over such use. LMCC misinterprets the significance of amateur secondary status and states that "Amateur applications in the 420-430/440-450 MHz should remain secondary to PMRS." LMCC also suggests the possibility that, "recognizing that amateur radio service will see a

net constriction by the recommended reallocation of 420-430/440-450 MHz," 1390-1395/1427-1432 MHz might be allocated to the amateur service to offset this constriction. "Constriction" is, of course, a bit of an understatement; LMCC has offered no ideas as to how amateurs could continue to share the bands.

What should amateurs do?

First, what you shouldn't do: Don't complain to your Congressman about the FCC, or write a nasty letter to the FCC. The LMCC petition is a private-sector initiative, not a government proposal. By law, the FCC has to put the petition on public notice and invite comment. That's all the FCC has done with it. Criticizing the FCC at this stage would be inappropriate and counterproductive.

Here is what you should do.
---
1. Examine the list of LMCC members. You may be a member of one or more of these organizations. If you are, write to that organization as a member and inform them that the LMCC, which has listed them as a member and supporter, has taken an action that is contrary to your interests. Don't assume that they know anything about the petition or its implications for Amateur Radio, but do make it clear that as a member, you expect them to disavow the LMCC petition insofar as it affects Amateur Radio. (A SAMPLE LETTER TO "TRIPLE A" IS AT THE END OF THIS)

2. Prepare a comment on RM-9267 and submit it to the FCC. At the top, it is very important that you clearly indicate the file number: RM-9267. Send an original and four copies to: Office of the Secretary, Federal Communications Commission,
Room 222, 1919 M Street NW, Washington, DC 20554.

In your comment, explain how the loss of access to the 420-430/440-450 MHz band segments would affect you personally, and how it would affect the ability of radio amateurs in your community to provide needed public service. Even if you do not use these segments yourself, it is likely that loss of access would result in more crowding and interference in the part of the band, or in another band, that you do use. Don't overlook the fact that if you use linked voice or packet systems, it is quite likely that some of the links you rely on are in either or both of these segments.

3. If you are involved in amateur radio public service communications, arrange for the government and non-government agencies that you serve and ask for a written statement of their support.

4. Arrange for any Amateur Radio organizations that you belong to, to submit comments. This is especially important in the case of organizations with interests in the 420-450 MHz band.

What if, in spite of our comments, the FCC decides it likes the idea?

The primary occupant of the 420-450 MHz band is the military. Before the FCC can take the next step toward reallocation, it must first obtain the agreement of the federal government. Then it would have to issue a Notice of Proposed Rule Making and must solicit public comments on its proposal. In other words, nothing is going to happen overnight and there will be at least one more opportunity for public comment.

It seems we hear about threats to the amateur bands all the time. How serious is this one?

The threat must be regarded as very serious. The LMCC is a bona fide and respected organization. We must assume that their proposal will be taken seriously.

Where can I get a copy of the LMCC petition?

The petition, with attachments, is 72 pages. It is available here as an Adobe Portable Document Format (PDF) file.

Prepared May 12, 1998, by the American Radio Relay League, Inc., as an information service to members.

ARRL, 225 Main Street, Newington, CT 06111 USA

HERE IS THE SAMPLE LETTER TO "TRIPPLE A"

American Automobile Association
1000 AAA Drive
Heathrow, FL 32746

Dear Sirs:

I have been a satisfied member of AAA-Connecticut since (the year). (Include your member number) Recently, however, I have learned that an organization of which AAA is a member has taken a position, allegedly with the support of AAA. that is contrary to my interests.

On April 22, the Land Mobile Communications Council filed a petition with the Federal Communications Commission (designated RM-9267) that seeks to reallocate the frequency bands 420-430 and 440-450 MHz for the use of the Private Mobile Radio Service. These bands are now heavily used by radio amateurs, operating in the Amateur Radio Service, for a variety of public service and public interest communications. The reallocation proposed by LMCC is incompatible with these operations.

As a licensed radio amateur for 35 years, I am dismayed by the LMCC proposal. I am even more dismayed to find that AAA, an organization I have long supported, is listed as an apparent sponsor of this proposal.

I ask you to determine whether AAA has, in fact, adopted a position in support of RM-9267, and if so, what steps can be taken to request reconsideration of this position. If AAA has not adopted a position in

support of RM-9267, I request a written statement to that effect.

Thank you for your attention to this important matter.

Sincerely,

(You)

(GOOD LUCK, AND PLEASE DO THIS TODAY!!!!!!!)

Is there any users out there that use the ICOM-725. I am looking for a little history on them and some reports on how good or bad they are. I would also like to know how to modify the transmit freq. on this radio.

Any and all help would be very welcome.

Please post your replies in the news group. I like every one to read them, I know I feel cheated at time when some people ask questions and I know some one replies and I don't know what was said.

Thanks

> would be
> rather offended by the above paragraph.

Many people, these days, are indeed offended -- deeply offended -- by the truth. In fact, lies and distortions seldom offend, since they can usually be proven false. But there is nothing quite like the sting of truth.

However, grown up ladies and gentlemen, if they are interested in making anything of their lives, should dispense with the "sensitivity" that prefers silence, lies, or euphemisms to facing hard facts. Only by acknowledging and facing hard and difficult truths can solutions be found. This goes for all races.

Even Jesse Jackson admits the essential truth I posit above: he stated that, alone at night on a city street, he is more apprehensive at the approach of young Black males than of young White males. If Jesse Jackson can be that honest, so can we.

> It leads one to believe that
> you think
> crime is a genetic rather than a cultural issue.

It is, indubitably. Even among Whites, those with low IQs commit more crime than those with high IQs. The prisons are filled with borderline morons, largely unemployable and uneducable. And IQ is highly heritable -- about 80 per cent.

Actually, the structure of every organ of every living being is determined within rather strict limits by the genetic code of that being. This law is not suspended for the human brain.

And it is human brains that create culture -- not the other way around.

> In fact, maybe I AM

> "Nigger"? A clever euphemism used in an insulting generalization
> doesn't make
> it any nicer.
>

I'm not trying to be mean -- just honest. Congoid is a scientific term, not a euphemism. It distinguishes the equatorial African race from the Capoids, and from the largely Caucasian Semites of North Africa. I try not to use slang, especially not insulting slang.

Most Blacks aren't criminally inclined: at least 70 per cent. are not. But living in a society composed of 20 to 30 per cent. criminals is vastly different from living in a society with only 3 to 5 per cent. criminals.

Regardless of our wishes on the matter, it remains true that the races which evolved further from the Equator seem to have the advantage when it comes to the skills of civilization -- creating civilizations, maintaining and advancing them, and living peaceably within them.

It may be that living where the Winters are severe killed off the impulsive and the dull, and selected the reflective, the thoughtful, and those capable of long-term planning. And it may be that life in the crowded, relatively unchanging tropics selected for quick, often violent "eat or be eaten" reflex actions, which are maladaptive in a modern technological society.

> Don't think I am making excuses for the Black race, but having seen

> racial
> correlation, but this is incidental to cultural factors, and not
> directly
> caused by genetic ones.
>

Look at Africa herself before the arrival of Europeans -- or thirty years after their departure. Look at what South Africa is becoming.

Then look at the Irish and the Italians, who certainly lived in inner city "poor warrens" but who never descended to the savagery of, say, Washington DC, or Monrovia.

> Here is your homework... dig up all the figures you can on crime
> committed by
> RURAL Black youth, and compare it to figures on rural White crime. I
> bet the
> statistical differences there become a non-issue.
....

By all means, let's try to find those figures. I suggest you start by looking at states with large Black populations, like Mississippi, and comparing them to states with the same or larger degree of urbanization, but smaller percentages of Blacks. If the statistics are broken down by race, so much the better.

But that really shouldn't be necessary. Africans and Europeans have both been on this planet for millennia. For most of those millennia neither interfered with the other. The Europeans created, with all its faults and virtues, Western Civilization. The Africans created... Africa.

With best wishes,

Kevin, WB4AIO.

He was run off of HF. 3894.5, specifically. We got tired of his whining, so we cranked 'er up and his weak station could not compete. After several months of unsuccessful attempts at jamming and disrupting the communications of others on 3894.5, 3950, 3901, and 3898, he decided to sell his rig and buy a computer instead so that he could take his frustrations out on the Internet. This is why you now have to be subject to his endless tirades on this newsgroup. On behalf of amateur radio operators worldwide, I hereby apologize for the actions and behavior of this poor misguided soul.

"WE" got tired? What a laugh. This poor pathetic punk has no HF
license. He can't even get on 3894.5 as he is a Tech Plus, which is
2/440 and 10 meter only. I know you folks are tired of him, but when
the Arbitron ratings come out for his radio program, he will be run
off to another 3rd rate station playing Big Crosby or something. he We
will soon have a break from him as I'm sure he will have to move
again. As you know, they don't have any telephones on Trailways buses
for him to get on the internet.

31 posts since Saturday at 10:00 am.. What a pityful troll you are. I can't
imagine what it must feel like to hide behind a keyboard and call others names,
does it feel powerful? does it make you feel like something your not?, a man
perhaps? Sharing an anonomous opionion about something is one thing, hiding in
the corner calling names is another. The only one here whining and whimpering
seems to be you. At least trolls like Masa and Burt are man enough to sign
thier posts.
When will TheLibNet anon finally make a stand? Probably never, your a gutless
troll and that's all you'll ever be. My father taught me to stand up and be
heard right or wrong, what did yours teach you? or was he a mouthy anon too?

Tim, ka8ddz

Sorry, Thrower. That's not how it works in the real world. An accused person is innocent until proven guilty. You're the one making the accusations; let's see you provide proof that I am who you say I am.

Better tell it to your friend Thrower. He's the one who chose to engage me, so to speak. I was merely refuting some of the nonsense being spewed forth by our mutual adversary Burp. Then, here comes Thrower with his usual whiny vendetta against anyone who posts from an AOL account. Read the threads and you'll see the truth. I made absolutely no mention of Thrower until he began his tired crusade against me (or whomever he claims me to be.)

Closed Circuit Advisory

The following advisory is not for transmission over amateur radio. Once again we are forced to ask our listeners for their financial support. According to Support Fund Administrator Andy Jarema, N6TCQ, Newsline is again existing on a week to week basis. Andy says that the creditors could pull the plug at any time.

So please help by contributing what you can, as soon as you can to the Newsline Support Fund. The mailing address is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1078 for release on Friday, April 10th, 1998 to follow.

<*>

The following is a QST

New York hams drive taxi CBers off 10 meters and Minnesota hams provide aid in the wake of a killer tornado. These stories and more on Newsline Report number 1078 coming your way right now!!!

<*>

Hams drive taxi's off 10 meters in NYC

New York City radio amateurs are claiming an early victory in their war to run non ham taxi dispatch communications from the 10 meter ham band. As previously reported on Newsline, hundreds of Big Apple taxi drivers had installed illegally modified citizens band radios in their cabs. The radios were being used to run dispatch and other voice communications in the CW portion of 10 meters.

According to the latest reports, the taxis are now leaving 10 meters faster than they came onto the band. This, as more and more hams are coming into the spectrum between 28.0 and 28.2 MHZ running high power Morse code practice transmissions.

Also helping matters is a recent edict from the New York City Taxi and Limousine Commission. That agency warned all 14,000 of the city's taxi drivers of the severe consequences if they were found to have non-approved radio equipment in their cabs.

The FCC also gotten into the act. Under New York City taxi regulations each cab is obligated to go through an overall vehicle safety inspection four times per year. Once a week, the FCC is visiting an inspection site in Queens, New York with frequency measuring equipment. Taxis with two-way radios are diverted to a special holding area where an inspector can evaluate the radio.

So far, 98% of the radios inspected have been found to be illegal for taxi dispatch use. The FCC is warning the drivers in person about the possible penalties. Drivers of cabs equipped with illegal radios are also receiving a follow-up letter that's says any recurrence will result in the issuance of a "Notice of Apparent Liability" and a possible fine of up to $5,000 for each violation.

Needless to say the drivers are not all that happy about the effort to make them vacate the band, but they are moving away. To make sure the problem does not again take place, leaders of the campaign to run the taxi's off 10 meters are saying that there are additional enforcement actions being

planned.

<*>

Birmingham amateurs respond to tornado hit

A powerful tornado rips through Birmingham, Alabama with amateur radio operators assisting before and after the storm.

The death toll stood at nearly 20, amid fears that rescuers would find more victims trapped in debris. An estimated 150 people were hurt. The tornado hit April 8th, damaging or destroying about 150 homes in residential communities less than 10 miles west of downtown Birmingham. Alabama's governor declared a state of emergency. Entire houses were picked up and moved, others were leveled. More than 12 hours after the storm hit, rescuers were still going house to house, looking for victims.

Amateur radio operators were busy hours before the tornado hit, providing Skywarn communications for the National Weather Service. After the tornado struck, hams stayed on the air, assisting emergency management officials with disaster recovery communications.

Preliminary surveys classified the tornado as an F4, just one step below the most devastating F5.

<*>

Minnesota Tornado

Ham radio operators from across Minnesota became a communications lifeline after tornadoes struck two towns on March 29th. The twisters flattened Comfrey and badly damaged St Peter. Both are in the southern part of the state. And in both, electricity and telephone service were knocked out. That's here ham radio came into service.

For Minnesota Section Manager Randy ''Max'' Wendel, N0FKU, this was more than a disaster that required the helping hand of ham radio. St Peter was his hometown, and the place where his parents still lived. Wendel and Minnesota SEC Gary Peterson, N0ZOD were among dozens of ARES members who responded. Wendel and Peterson alerted other ARES members to be prepared to assist with communication, then headed for St Peter. ARES members from

Rochester and the nearby Mankato area were among the others who turned out. Wendel himself arrived in St Peter after nightfall, using his ARES identification to get past state police barricades. Wendel found his parents safe and their home damaged. Others, including their neighbors, found themselves suddenly homeless.

Wendel said hams already had situated themselves at key locations, including the Nicolet County Emergency Operations Center, a shelter for victims, and at a sports arena. The ARES team set up an emergency base station at Gustavus Adolphus College. While most students were out of town for spring break, 28 students remained on campus and had no contact with the outside world.

During the next day or so after the tornado struck, ham radio was the only communication out of the city and the primary means to coordinate supplies into the city from the Red Cross in Mankato to the shelters in St Peter. The morning after the tornado, the Salvation Army arrived to distribute food. Hams provided logistical support for that effort as well. Other hams shadowed disaster assessment officials who went door to door throughout the city or handled net control duties at the EOC. Still others simply made themselves available as needed to cooperate in the recovery effort." Rick Lindquist, N1RL

<*>

NYC/LI SM recalled

The embattled New York City and Long Island ARRL Section Manager has been removed from office. Members of the New York City-Long Island Section have voted to recall Leonard Buonaiuto, KE2LE, from office.

Len Buonaiuto, KE2LE, got the news that he was out as the New York City and Long Island Section Manager after a committee of ARRL Tellers counted the votes on Thursday, April 2nd. The outcome was 699 League members voting in favor of recalling KE2LE. Only 347 members thought he should remain. Joe Tomasone, AB2M, was the ham who headed up the

recall drive against Buoniuoto:

"I hope that the message it would send is that if you do undertake a position of this importance with this many responsibilities -- and you don't intend to discharge the office, you don't intend to live up to those responsibilities, nor explain yourself to or communicate with your constituents in your area as to why you are not performing these duties, then you should not undertake the job in the first place." Joe Tomasone, AB2M

The ARRL has appointed George Tranos, N2GA, the immediate past president of the Long Island Mobile Amateur Radio Club to complete the remainder of Buonaiuto's term. That ends on January 1st, 1999.

Meanwhile, Tranos already has restored to office some of the field appointees dropped by KE2LE. This includes Section Emergency Coordinator Mario Maltese, WF2T.

"We've had a lot of forward motion before this section manager came in and we just want to pick up that forward motion again and go on as if the whole thing was a mistake." Mario Maltese, WF2T

Others reappointed to their former offices include Official Observer Coordinator Rob Todaro, N2JIX, Section Government Liaison Mark Nadel, W2UFO, and Nassau County District Emergency Coordinator George Gluck, WA2WKV. Tranos has said that he will be making additional appointments in the very near future. So far there has been no comment on his ouster from KE2LE.

Newsline did attempt to e-mail Buoniauto to get his reaction but the note was returned as undeliverable.

Joe Tomasone, AB2M, who organized the recall tells Newsline that this is only the second time in League history that a Section Manager has been successfully recalled office.

The first call for nominations in the regular New York City and Long Island Section Manager election will appear in the July 1998 issue of the Leagues' QST magazine.

<*>

Mitnicks jail computer

A federal judge says that computer hacker Kevin David Mitnick, N6NHG may be getting access to a computer, but he will not be alone when he uses it. U.S. District Judge Mariana Pfaelzer has rejected Mitnick's request for a computer in his cell, but she may permit him the use of a computer in what she terms as a supervised atmosphere.

If the plan is approved later this month, a computer will be set up in a room in the downtown federal building where Mitnick could be brought to use it under supervision. There will be no modem installed and Mitnick will not have access to the Internet or the world wide web.

Mitnick and an accomplice are charged in a nearly three year alleged hacking spree. His lawyer, Donald Randolph, said his client needs access to a computer to review massive amount of evidence the government says it has against him.

<*>

New 220 MHZ handheld by Premier Communications

ADI says it will soon introduce a new handheld radio for the 1.25 meter band. Dubbed the ADI PR-222, the HT is a compact, rugged radio that offers 5 watts of output on the 1.25 Meter amateur band. Other features include built-in CTCSS encode and decode, 40 channel memories, the ability to store a different CTCSS tone and repeater shift in each memory, a real BNC antenna connector and much more. ADI says that the PR-222 should be available at the end of May. A 6 meter HT is expected to follow shortly.

(Via ADI Premier news release)

<*>

Another ham business fails

Meantime, another business has left the ham radio industry. The latest to depart is Shack Attack of Orem, Utah. This, according to a recent announcement from proprietor Blaine Watkins, KB7VRD. Shack Attack produced callsign license display plaques, a wooden HT desktop radio holder and a wooden desktop callsign display.

<*>

REACTS new DC home

REACT International has finished the relocating to its new offices in the Washington, DC area. Their new address is:

REACT International, Inc.
5210 Auth Rd. Suite #403
Suitland, Maryland
20746

Their phone number is:

(301) 316-2900

or you can e-mail the group at:

react@reactintl.org

(Via REACT)

<*>

Ham Books remailer

Ham-Books is an Internet remailer devoted to the literature and periodicals of amateur radio. Covered are magazines, newsletters, books and much more. To be added to the mailing list, send e-mail to:
majordomo@qsl.net

In the body of message simply type subscribe ham-books.

(Via press release)

<*>

Repeat@repeater.net

The repeater owners remailer has taken on a whole new look.

Repeat@repeater.net is the latest incarnation of the Repeater Owners Remailer. Hosted by Corey Dean, N3GZW, it recently replaced a similar Internet listserver run for two years by Bob Biekert, KA5GLX, in Houston, Texas.

repeat@repeater.net uses majordomo protocol. To join, simply send e-mail to:

majordomo@repeater.net

Leave the subject line blank. In the text of the message simply type subscribe repeater-list.

And, oh yes. Corey says that he wants to thank all the subscribers for making the list happen. He says that without them the remailer would not exist.

If you want to join thus remailer but missed the address, you will find it in the printed version of this weeks newscast.

(Via Newsline)

<*>

Stan Harter, KH6GBX - SK

Some sad news. Word that Stanly Harter, KH6GBX, the Assistant Chief of Telecommunications with the California Office of Emergency Services, died suddenly the evening of April 2nd near his home in Sacramento. The cause of death was believed to have been a massive heart attack. He was 68.

As an Emergency Services manager, there was nobody who could possibly match the enthusiasm of Stan Harter. While employed as the state communications officer in Hawaii, KH6GBX pioneered what would later become the nationwide Emergency Broadcast System, and later the new Emergency Activation System or EAS. He left Hawaii to take a position with the California Governor's Office of Emergency Services. At the time of his death, he was Program Manager for the states Auxiliary Communications Service, as well as EAS Vice Chairman and Executive Director of the FCC' California State Emergency Communications Committee.

Stan Harter's contributions will long be remembered in all circles where people dedicate themselves to helping others through the magic of radio. He is survived by his wife Alicia, son Mitchell and daughter Annette. A website has been established at:

www.garlic.com/oes/harter.htm

for anyone wishing to express condolences to the Harter family.

<*>

Scout hams on hamsats

Utah will be having Boy Scout events in three different cities on May 1 and 2. According to Randy Kohlwey, N7SFI, several hams will be active on the Amateur Radio satellites that would like to set up some scheduled contacts with other scout groups. If you are interested contact Randy by e-mail to:

n7sfi@amsat.org

(Via N7SF)

<*>

New satellite tracking antennas arrive in Moscow

And John Heath, G7HIA reports on the AMSAT bulletin board that Leonid Labutin, UA3CR has received the new satellite tracking antennas and rotor sent to him. In a packet message received by G7HIA, Leo confirms the safe arrival of the package in Moscow. Leo also sends his thanks to everyone who made a contribution to getting the new gear to him.

G7HIA adds that package included all of the QSL cards he had received from stations who worked RS3A with a request to Leo to send QSL cards in return.

(Via AMSAT-NA BBS)

<*>

Space papers wanted

The 16th Annual AMSAT Meeting and Space Symposium slated for October 16th to the 18th in Vicksburg, Mississippi has issued its first call for papers. Subjects of the papers should be topics of interest to the amateur radio satellite service. One page abstracts are due no later than June 1st. E-mail them to:

w5xx@magnolia.net

(Via AMSAT)

<*>

28 MHZ pedestrian mobile - V.K. to U.S.

>From the international file comes word of what is believed to be the first pedestrian mobile contacts between Australia and the United States on 10 meters for the new cycle 23 took place Saturday, March the 28th. That's when Peter Parker VK1PK contacted KZ5MM and NE6GN across the Pacific pond.

What makes these contacts unique is that Parker was a walking mobile. He used a converted Johnson CB transceiver powered by a 12 volt battery feeding a home made groundplane as a station. The contacts to the U.S. followed a successful pedestrian mobile QSO with ZL2RR earlier that same morning.

This is believed the first time that the Pacific was able to be spanned by a pedestrian mobile station not using a remote base or other type of relay configuration. Output power of Parker's station was only 12 watts PEP.

(Via Q News)

<*>

T-Hunting Special - Part 2

And finally, some hams think that finding hidden transmitters is one of the greatest thrills in ham radio. The CQ VHF National Foxhunting Weekend, April 25 and 26.

"Hidden transmitter hunts in the USA have traditionally involved cars, trucks or vans full of direction finding gear, roaring off for miles of fun. But the folks in China, Korea, Japan and many countries of Europe such as Belgium and Sweden, well, they think we're sissies. To them, a ham radio foxhunt involves a couple of hours of running through thick forest, using hand-held direction finding sets to seek out five to seven one-watt transmitters.

It's not unusual to have to run or walk three to five miles to punch your ticket at all the transmitters, or "foxes" as they call them. It's a sport for all ages, fit and not-so-fit. They even have national and world championships, the last World Championship was September 1997 in Germany.

Competitors are grouped into age and gender categories, and there are medals for individual and national team winners. Just like the Olympics, right? Well, European and Asian foxhunting leaders would indeed like to see it become an Olympic sport. And they would also like it if hams in North and South America would get more involved. Next week, I'll tell you about upcoming opportunities for that to happen.

Meantime, consider an international-style foxhunt for one of your activities during the National

Foxhunting Weekend. For more information, see the
April issue of CQ VHF magazine and my Web site,
which you can access by link from the Amateur Radio
Newsline site." Joe Moell, K0OV:

Be here next week for the conclusion of Joe's 3
part series.

[1082]

Newsline report number 1082 for release on Friday, May 8th, 1998 to follow.

<*>

The following is a QST.

The Land Mobile Communications Council tells the FCC to give the 70 centimeter ham band to private mobile operators, the Radio Society of Great Britain takes a new stand against worldwide Morse code testing and the Dayton Hamvention is almost here. These stories and more on Newsline report number 1082 coming your way right now...

<*>

LMCC demands 70 cm ham band for commercial use

The Land Mobile Communications Council has issued a demand to the FCC that it immediately reallocate of most of the 70 centimeter Amateur band over to private mobile operations with private land mobile designated as the primary user.

Technically the document is nothing more than a formal rule making request to the FCC that has been designated RM 9267. In reality it is more a demand by the LMCC for the FCC to immediately reallocate

420 to 430 MHZ and 440 to 450 MHZ away from the federal government and over to the Private Mobile Radio Service on a primary basis. The Land Mobile Communications Council is also asking for news allocations at 1390-1400 MHZ, 1427-1432 MHZ, and 1670-1675 MHZ. It is also demanding a walloping 85 MHZ at 960-1215 MHZ and it wants all of this turned over to the Private Mobile Radio Service no later than 2010.

But LMCC is not willing to wait until 2010 to take over the 70 centimeter band even though this is the second most popular of the Amateur radio services' VHF and UHF allocations. Amateur Radio is a secondary user of 420-450 MHZ. There are thousands of FM repeaters operating from 440 to 450 MHZ and a variety of modes on the air every day in the 420-430 MHZ segment. While the Land Mobile Communications Council petition indicates that it is willing to permit Amateur Radio to retain some sort of secondary status, this would be only on a non-interfering basis with the new commercial interests.

Experts say that the best way to kill RM 9267 is though a massive letter writing campaign to the FCC. A campaign that outlines the specific use of the band by Amateur Radio Interests -- informational filings that detail how every hertz of 420-430 and 440-450 MHZ is utilized on a day to day basis by hams.

The commentary cutoff date on RM 9267 is June 1st. This leaves precious little time for radio amateurs around the nation to react. Those responding must be certain to reference RM 9267 at the top of your letter. Send comments to the:

Secretary
FCC
Washington DC
20554

Again, that June 1st as the commentary cutoff date on RM 9267.

(Via FCC, ARRL, VHF REflector, Newsline)

<*>

RSGB on Morse

The Radio Society of Great Britain says that it no longer supports mandatory Morse code testing for access to the amateur bands below 30 MHZ. This according to several sources in the U.K. who tell Newsline that the national society will lobby the International Amateur Radio Union to try to get a rules change passed at the 2001 World Radio Conference to support the abandonment of the international statutory requirement for a Morse testing.

The change in policy by the RSGB comes only eighteen months after its December 1996 announcement of the results of a survey on The Future of Amateur Radio in that nation. At that time, thirty percent of the societies members responded. Two-thirds said that Morse code should remain as an international licensing requirement.

And that's not all. These same sources say that the RSGB will propose to the nations Radiocommunications Agency that a new class of ham license be introduced in the United Kingdom. One that will give all amateurs access to the HF bands below 30 MHZ by passing a very simple slow speed CW test. Possibly as slow as five word per minute. Word is that the nations Radiocommunications Agency supports this proposal.

(Via Newsline)

<*>

Verbal Morse

The Morse code has a new group of supporters in military circles but not the kind you might expect or want. Australia's Q-News reports that radio operators that are believed to be members of the Southern Sudan Peoples Liberation Army have been heard on the 40 meter ham band. What they are doing is sending messages by vocalizing the Morse code in both English and Sudanese local languages. According to VK2EA, the pirate operators are actually speaking each dot and dash. Presumably they think its giving them a measure of military security.

(Via Q-News)

<*>

Canadian Amateur's licence suspended for willful interference

A Canadian ham has had his license suspend for six months. This, after an investigation by Industry Canada proved that the Central Ontario amateur was the source of malicious interference to an area repeater.

The suspension follows an investigation by the Department into complaints by amateurs about interference on the particular two meter repeater spanning a period of more than two years. Industry Canada says that repeater users played a major role in the investigation by collecting evidence and assisting in identifying the offender.

One side note. Industry Canada says that the amateur whose license was suspended cannot be named. This is because the information concerning the suspension relates to a matter between a private individual and the Government of Canada. And, since it is considered personal information, it is protected under Canada's Privacy Act.

(Via Radio Amateurs Canada)

<*>

Hamvention '98 is coming next week

Hamvention '98 is only a week away and it appears as if its going to be bigger and better than ever before.

Those attending the 47th Annual Dayton Hamvention will find some changes there. A dine around tour of Dayton Friday evening the 15th. The dismantling of forum rooms 1 and 2 resulting in the well attended Saturday Contest and DX Forums being moved to the near by Middle Dale High School. There should be twice as many buses to get you over there this year. A Ronnie Milsap Concert Saturday Evening. Newslines Bill Pasternak, WA6ITF moderating the Second Annual Town Hall Meeting Sunday Morning to be simulcast on the internet. Add to these hundreds of vendors and exhibitors, an enormous flea market. tens of thousands of dollars of prizes, 30,000 ham radio enthusiasts, and you've got all the ingredients for the best Dayton Hamvention ever! All we need is mother nature to cooperate. Hopefully the only rain you will see there is the RAIN Booth, number 719. And I'll be sharing will Newsline, and This Week In Amateur

Radio. Again that is booth 719. See you there!!!

(Via Newsline)

<*>

O'Connell recovering

One ham who will not be at this years Dayton Hamvention is Chicago attorney Jim O' Connell, W9WU. Jim, who traditionally hosts the Hamvention's Legal Forum is home from the hospital and recuperating following heart bypass surgery. Get well wishes can be sent to Jim at his callbook address. O'Connell tells Newsline that ARRL General Counsel Chris Imlay, W3KD, will take his place as forum host.

(Via Newsline)

<*>

For the birds

Remember our story a few weeks ago asking hams to help monitor for a flock of radio tagged migrating whooping canes? Well word from the organization involved in tracking the birds is that their migration cycle is now complete.

The radio-tagged birds are part of a federal migration experiment. They were recently detected by satellite tracking to be about 30 miles south of Rock Springs, Wyoming. This is the end of their migration cycle and members of the research team have expressed their appreciation to all of the radio hobbyists who volunteered to help in this airborne transmitter hunt.

(Via news release)

<*>

Tandy CEO to retire

Some names in the news. From Ft. Worth, Texas word that Tandy Corporation Chief Executive Officer John Roach will retire at the end of this year. It was under Roaches tenure that ham radio gear was introduced into the Radio Shack line of products.

Roach will be succeeded as CEO by Tandy President Leonard Roberts. Roberts won rave reviews since coming to Tandy in 1993 to run its chain of Radio Shack electronics stores. He will take over from

Roach on January the 1st, 1999.

(Via news release)

<*>

Chicago resources webpage

Also, KB9RTM says that has developed a webpage which lists amateur radio resources for hams visiting the Chicago area. This webpage includes listings of repeater frequencies, nets, and radio club meetings. This to provide visiting hams the opportunity to enjoy ham radio while in the Chicago-land area. The URL for the webpage can be found at:

www.netcom.com/~ckuter/kb9rtm.htm

(Via KB9RTM)

<*>

Techtalk

And Techtalk is a radio program on technology from a business point of view. Produced and co-hosted by Sanford Weinberg, KO6PZ, the show' focus is on how to help your business through the use of technology along with inside reports on ham radio. Currently, TechTalk airs only KYPA on 1230 AM in Los Angeles, California but the producers are looking to put it into syndication. You can find out more information and hear the shows at:

www.techtalk.net

(Via KO6PZ)

<*>

Russia causes another ISS launch delay

Ham radio's new presence aboard the International Space Station will once again be delayed.

The launch of the ISS is being delayed once again. This time due to space hardware production problems in Russia. While the first modules of the ISS are still slated to be launched later this year, Russia admits that is far behind schedule in finishing its main contribution to the station.

A top Russian space official has told the press corps that the launch of the new station's first

module will have to be pushed back from June until late this fall. This, because his nation had not finished construction of the service module where astronauts will live.

The current launch plan was already eight months behind schedule before the latest unexpected change. This means the first crew will not arrive until late spring or early summer of 1999. Ham radio is still slated to be an integral part of the station as soon as the first Astronauts arrive.

With ISS being delayed again, and few shuttle flights scheduled to carry SAREX gear, don't look for a lot of live ham radio from space except for operations from the aging Mir spacecraft.

(Via Newsline)

<*>

New hams for space

Meanwhile, NASA has two new astro-hams. They are astronauts Winston Scott and Daniel Tani. Scott is KD5DXD, and Tani is KD5DXE.

(Via ARRL, NASA)

<*>

DARA SAREX QSL'S

And the Dayton Amateur Radio Association has agreed to handle QSL duties for this fall's SAREX space shuttle STS-95 mission. That's the October flight that will carry former astronaut John Glenn into space for the first time since the 1960s. Two hams are also among the STS-95 crew.

(Via ARRL)

<*>

Israeli ham sat launch date announced

On the international front, Israel has just confirmed that the tentative launch date for the TechSat-1b ham radio satellite. Look for the bird to go into orbit sometime between June 23rd to the 24th.

According to Assi Friedman, 4X1KX, the TechSat-1b ham satellite will be very similar to the ill-fated TechSat-1a in the communications modes it will

provide. It will use 9600 Baud Frequency Shift Keying and will have VHF and L-band uplinks, with the downlinks in the UHF band.

(Via IRAC, 4X1KX)

<*>

DX

In DX, Mike Smith, VE9AA reports that the CY9AA QSL's finally arrived from the printer. Mike notes that they are quite similar to the bi-fold photo CY9AA cards from 1997. Mike says that he hopes those that are owed a cards will feel it was worth the wait.

Look for K6CT, N6CW and K9VV to be active as from the British Virgin Islands as VP2VDX in the CQ World Wide CW Contest. The group will be there May 27th through June 2nd. Activity outside the contest will be on the Warc bands and 6 meters. QSL via K6CT.

And KH2D reports that the KH2 prefix QSL bureau now is being run by the:

Mariana Islands DX Association
Box 445
Agana, Guam
96932

(Via various DX sources)

<*>

Communicating with babies

And finally, this story about another form of communications. Communications to very young children.

A new study says babies as young as six months can not only imitate actions, but remember them a day later. But only if the circumstances are exactly the same.

This information comes to us from down-under in New Zealand. That's where researchers in child communications used hand puppets and toys in their study.

In one test, babies watched as an adult would pull a mitten off a hand puppet, jingle a bell inside and then put the mitten back. When offered the

same puppet twenty-four hours later, the babies would pull off the mitten and ring the bell, but only if they were in the same place with the same people.

Further experiments found that twelve and eighteen month old babies could remember the actions they'd seen for a longer time. Some could retain and replicate actions for up to a month. One or two were even able to do so under different circumstances.

This discovery may have amazed scientists but its really something that any mother already knows. With my own son Corey listening intently, well sort of.

So far, nobody we know of has tried to teach these 18 month olds the amateur theory or the Morse code.

(Via News Australia)

<*>

With thanks to the ARRL, the Hudson Division Loop and the Radio Society of Great Britain, that's all from the Amateur Radio Newsline. Our web page is at:

www.arnewsline.org

and our e-mail address is:

newsline@ix.netcom.com

Before we go, we have an update on Newslines financial condition. According to our Support Fund Administrator, Newsline has only received enough monetary support to keep the service going though the end of May. In other words, the bills from April have been paid, but now money has to be raised to keep from losing the phones and e-mail service in early to mid June.

Andy says that Newsline still exists on a week to week basis. He says that if the funds dry up, he will pull the plug and Newsline will go away forever.

It's really up to you the listeners to see that this does NOT happen. The address is the:

Newsline Support Fund
P.O.Box 660937

Arcadia, California
91066

Please help keep Newsline on the air.

For now, with Bill Pasternak, WA6ITF at our editors
desk, we at Newsline say 73 and we thank you for
listening.

[1081]

Closed Circuit Advisory

Newsline report number 1081 for release on Friday, May 1st, 1998 to follow.

<*>

The following is a QST

Another challenge to a ham band, a real life ham radio hero and more on Newslines financial crisis. These stores and more coming your way right now...

<*>

1.2 GHz threat

Ham radio could loose part of an important UHF band if the second civilian frequency for the global positioning system frequency is assigned an allocation at 1.2 GHz.

The Amateur Radio 23 cm band runs from 1240 to 1300 MHZ. A decision on whether the new, second frequency will be 1205 or 1250 MHZ is expected to be made in August. An allocation at 1250 MHZ could mean the end of hams in the band from 1240 to 1260 MHZ.

In February 1997, the Department of Transportation and the Department of Defense announced an agreement assuring civilian GPS users of a second frequency. This frequency is considered essential for critical civilian GPS uses.

According to a Department of Defense news release, the White House Commission on Aviation Safety and Security has called for the establishment of a second civil frequency as part of a broader program to maintain U.S. leadership in aviation and satellite technology. Unfortunately this leadership position could come at a high price for Amateur Radio.

(Via FCC, ARRL, W5YI)

<*>

ARRL request on bandplans gets RM instead of declatory ruling

The FCC has assigned a rulemaking number to the ARRL's request for an declaratory ruling. One that equates band plan compliance with good amateur practice.

Since the ARRL announced that it was going to seek such a ruling, there has been growing criticism of the its position among two groups. First are newer hams who use FM on two meters as their only mode. They say that the proposal is targeted directly at them because many are unwilling to abide by the so-called gentlemens agreement bandplans. These hams say there is no reason to follow a bandplan that they had no voice in creating and would not have voted to put in place. And, as previously reported, some go so far as to say that they believe no mode other than FM belongs on any ham band above 50 MHZ.

The proposal is also coming under attack from the weak signal community. They point to the ARRL's willingness to permit all bandplans to be codified as good operating practice. The weak signal people are worried that different bandplans could develop in different parts of the country. They say it would make SSB and CW DXing impossible. They say that the only acceptable solution is a single national bandplan where certain pieces of spectrum are designated as off limits to FM.

In issuing Rule Making number RM-9259, the FCC has indicated that is not going to accept the League's

call for it to issue a declatory ruling in this matter. Rather, it has set May 21st as the due date for the first round of comments. What it hears back from the ham pubic will probably be the deciding factor as to whether it will issue the ruling that the league requests, issue a formal Notice of Proposed Rule Making or simply let the matter die. Again, comments on RM-9259 are due to the FCC no later than May the 21st.

(Via FCC release, VHF Reflector, others)

<*>

Michigan Doctor ham saves lives

A retired Michigan doctor has been proclaimed as a hero after saving the lives of four men shipwrecked on a deserted island. And Earl Weston, W8BXO, did it right from the basement of his home in the town of Bloomfield.

Usually, Amateur Radio is recognized for its value during disasters. In this instance, disaster was averted.

It all started Tuesday morning, April 21. That's when Earl 'Doc' Weston, W8BXO, was monitoring the Intercontinental Traffic Net on 14.313 MHZ from his suburban Detroit, Michigan basement:

"A captain from a fifty foot sailing yacht; Capt. Heinze Schilling, HB9HFS; called in with emergency traffic.

The captain was sailing off the coast of a small island in the Bahamas and was attracted by a flashing mirror" Earl Weston, W8BXO

Four men, all believed to be Cuban refugees, were shipwrecked on that island. They had been there several days without food or water. The Coast Guard was contacted:

"The Coast Guard said '...very fine...we will get right into action.' Within an hour Capt. Heinze reported that a Coast Guard helicopter was overhead and landing to pick up the men. They were taken to the city of Nassau because they were in Bahamian waters.

Capt. Schilling certainly is a hero in this event. He even took time to go ashore to talk with the men. He certainly is a fine radio amateur." Earl Weston,

W8BXO

And so is Earl 'Doc' Weston, W8BXO, a fine radio amateur.

(Via Newsline)

<*>

Nashville Hams and CB'ers

We have more information regarding the involvement of both hams and CB radio operators in the aftermath of tornadoes that hit Nashville, Tennessee on Thursday, April 16th. According to Tom Delker, K1KY, the communications center was activated with hams responding from Sumner, Rutherford, Davidson, Dickson, Robertson, Wilson, and other Tennessee counties. For several days following the twisters, hams provided communications in support of Red Cross relief operations, primarily in the areas of feeding victims and relief workers, and assessing damage.

But hams were not alone this time. Al Smith of Brentwood, Tennessee tells Newsline that members of his off road CB group were asked by county officials to do welfare checks on several people who live in had to access areas. Smith says that the off roaders used their 11 meter equipped four wheel drive vehicles to reach over two dozen isolated homes in rural areas outside of the city.

(Via K1KY, Tn. Off-Roaders)

<*>

Newsline Special Bulletin

Here the report on Newsline financial condition. The good news is that Newsline is here this week. This is because some people close to Newsline and the Newsline staff have chipped in to pay a substantial part of the back bills. The bad news is that Newsline is still broke and could disappear without warning.

As reported last week, Newsline is currently operating without any meaningful funds. The service literally exists day to day and is struggling to survive.

Newsline must raise an estimated $1200 a month each month to keep the service operational. All support

is welcome. The address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

Now, back to the news.

(Via Newsline)

<*>

Japanese economy affecting ham radio

The combined net profits of major Japanese companies plunged almost 25 percent in the last fiscal year. This, as the slumping Japanese economy is forcing many firms to dump bad assets including investments in the United States. This say some might even impact on imported ham radio gear.

A survey by a leading Japanese financial newspaper of 1,744 listed companies shows that net profits for fiscal 1997 nosedived 24.5 percent. Non-manufacturing businesses were in particularly bad shape. Their net profits fell 51.5 percent in the fiscal year that ended March 31.

This is both good news and bad news for the domestic U.S. buyer of ham radio gear. As the Yen and dollar continue to collide, prices will continue to drop. The downside is that the slide cannot go on forever. It means lower ad lower profits that can reach a point where there is no profit at all. At that point some companies might decide to withdraw from the North American market, eventually drying up the supply of new gear available to hams.

(Via various published news reports)

<*>

Buy and Sell Website

Speaking about buying and selling, Karen Johansen, KC5FCU of Metrie, Louisiana tells Newsline that the ARES National web site has established a classifieds page. This, to help hams buy, sell or trade equipment. Karen says that this is a free service. The URL is very simple to remember. It's:

www.ares.org

(Via KC5FCU)

<*>

Radio station license revocation

The FCC has revoked a Texas radio station's license after a judge's finding that the owner engaged in a pattern of outright falsehoods, evasiveness and deception.

The Commission's action was issued on Wednesday, April 22nd. It was the first revocation of a station's license since 1993.

<*>

New WTB Chief

Still with the FCC, word that D'wana R. Terry has been named Chief of the Public Safety and Private Wireless Division of the FCC's Wireless Telecommunications Bureau. This is the bureau that oversees both the Amateur Part 97 and Citizens Radio Part 95 services. Terry has been acting chief since January.

(Via FCC Press Release)

<*>

Arnold on the radio

Bob Arnold, N2JEU, the New York state ham who runs a remotely controllable shortwave receiver on the world wide web is about to become a personality on the radio. Bob tells Newsline that he has completed talks with Radio New Zealand International to host a seven minute computer report as part of their bi-weekly "Mailbox" program. He starts on the air in late May.

(Via N2JEU)

<*>

New Nebraska EC

Matt Anderson, KA0BOJ has been appointed the Emergency Coordinator for Saunders County, Nebraska. He replaces Jim Sweeney, KB0DYY.

(Via news release)

<*>

Five year old YL passes element 1A

A New Jersey pre-teen is on her way to becoming the nations youngest ham radio operator. On Saturday, April 25, Ashley Kopacki, age 5, passed her 5 word per minute Morse code test at an ARRL VEC administered examination session hosted by the County Line Amateur Radio Club.

Ashley is a kindergarten student in Mount Olive, New Jersey. She frequently attends radio club meetings with her father Dave Kopacki, KF2EW. There, she helps with the sign in sheets, and is Official Cookie Taster. Ashley now has a year to study for the Novice written exam.

(Via Hudson Division Loop)

<*>

Big passing grade

A Las Cruces, New Mexico, radio club had eleven candidates pass their Technician exam after a recent Friday night, all day Saturday, and half a day Sunday weekend course.

According to information supplied by Jay Miller, WA5WHN, Mesilla Valley Radio Club had eighteen at the start. Eleven passed both elements, two more passed one element, but five failed both elements. The club also had two upgrades to Tech Plus and one attempt to upgrade to Extra. That candidate passed the theory but failed the code.

K5OI coordinated the effort with help was from five other hams. Tim says that it was heavily based on the ARRL video tapes and the accompanying workbook. This was a lot of work but it was well worth the effort.

(Via WA5WHN)

<*>

The Ian Varley Fund Established

Ian Varley, N2XUB, is in need of assistance from his fellow hams. This, according to Brenda Lee Spagna, N2TTO, writing in the Hudson Division Loop newsletter Spagna says that Ian, who has had epilepsy since childhood, is now also suffering from failing eyesight and frequent seizures. Arrangements have been made for an animal handler called Sheppy's Disability Dogs to training a puppy

to act as Ian's companion and to come to his aid in time of a seizure. The pup will be able to press an alarm pedal in the Varley home and stay by Ian's side until help arrives.

Spagna says that having a dog like this will give Ian back his independence. It will let him go back to enjoying his club meetings and helping out with radio communications at the various charity events with which he has been so active in the past. But the price of Ian's independence will not be cheap. The cost of this dog is $4,300.

As a result, any financial help Ian and his parents can get to help pay for the dog would truly be appreciated. All donations would go directly to Sheppy's for Dogs" and marked to the attention of the 'Ian Varley Fund.' The address is:

Sheppy's Disability Dogs Inc.
125 Marie Drive
Clarksville, Tennessee
37042

For more information about the 'Ian Varley Fund,' you can contact Brenda by e-mail to:

kf2sb@bestweb.net

(Via N2TTO)

<*>

VITA-SAT

Volunteers in Technical Assistance, an organization with close ties to ham radio has received FCC authorization to launch and operate an additional satellite. The bird will be in low Earth orbit operating on 149.81 to 149.9 MHZ for uplink and 400.5983 to 400.645 MHZ as downlink. The satellite will be licensed for non-voice, non-geostationary operation in the Mobile Satellite Service.

<*>

Dayton AMSAT Eatfest

Amateur satellite operators who plan to attend the 1998 Dayton Hamvention are invited to also drop by the AMSAT-North America dinner. This years food extravaganza will be held on Friday, May 15th, starting at 7:00 p.m. at Dayton's Amber Rose Caf,. Cost including tax and tip is $20.00 per person.

Those interested are asked to please pre-register with Ed Collins at his e-mail to:

edcollins@worldnet.att.net

<*>

UK Pirate operations

On the International front, the Radio Society of Great Britain reports that ham radio style pirate operations are on the rise in the United Kingdom. The nations Radiocommunications Agency says that the pirates are centered around 6.600 MHZ. The regulatory agency also says that it plans to take enforcement action against any unlicensed operations it hears in the 6.525 to 6.767 MHZ spectrum, This band is assigned in the U.K. for exclusive use by aeronautical services.

<*>

92 year old CW test

Congratulations to British amateur Les Breeze, 2E1FXS who has become the oldest known U.K. citizen to pass a 5 word per minute Morse code test. It was even more of a challenge for Breeze because he is blind. He was assisted in learning the code by his wife Doreen who is not a ham but studied with him in order to help him understand the code.

But Les Breeze is not finished yet. He has announced his intention to study the code and theory so he can upgrade to a full privilege U.K. Class A license.

<*>

DX

In DX, the "DX News Sheet" reports that DL1DA, is expected to be active from Mayotte as FH/DL1DA, on CW. The details on his stay are not known.

And F5PFO will be active from New Caledonia for the next three years. As of air time his callsign is not yet known.

And there are several stations active from Estonia using the special prefix ES80. This is in celebration of the 80th Anniversary of the Estonian Republic. The length of their activity is unknown. QSL as directed on the air.

And the World Association of Christian Radio Amateurs and Listeners will celebrate its 40th Anniversary with a live operation from the grounds of the Newsome South Methodist Church in West Yorkshire, England. Using a unique radio callsign GB4OWR, the on air celebration will take place the on May 5th, 6th, 8th, 9th and-10th. Listen for GB4OWR on 3.747, 7.047, 14.333, 18.133, 21.350 and 28.333 MHz. Times of operation subject to propagation and operator availability. Further information available from Harold Turner, G4YRH, at his callbook address.

Also, effective immediately the addresses and managers for the ARRL W5 and Alaska Incoming QSL Bureaus have changed. The W5 QSL Bureau now is the:

Magnolia DX Association
P.O.Box 999
Wiggins, MS
39577

The new Alaska QSL Bureau is at:

P.O.Box 520343
Big Lake, Alaska
99652

<*>

Newsline around the world

And finally, each week we recognize a bulletin station or organization that retransmits the Newsline service. This week, we are proud to announce that Newsline is now part of a Sunday Morning net in Western Australia.

Word from Will McGhie, VK6UU, that for the past eight weeks, Newsline is heard Sunday Mornings at 10:15 local time -- that's 02:15 UTC on a repeater network originating on 2 meters at VK6RAP and on 70 cm on VK6RUF, both in Perth. The linked 2 meter stations include VK6RCT, VK6RMS, VK6RAW, VK6RMW and VK6RBN. Add an FM simplex HF gateway on 29.120 MHZ in Perth and the Network is complete. Almost.

VK6UU says there is a possibility of High Frequency re-broadcast on 80M through to 15 meters depending how many HF rebroadcast stations stay on after the VK6WIA QST.

Our thanks and 73 to Will and the Hams down under who make Newsline available to Amateurs in Western

Australia.

(Via VK6UU)

<*>

With thanks to AMSAT, the ARRL, the Hudson Division
Loop, Australia'a Q-News and the W5YI Report,
that's all from the Amateur Radio Newsline. You
can write to us at:

Newsline
P.O.Box 660937
Arcadia, California
91066

Our web page is at:

www.arnewsline.org

and our e-mail address is:

newsline@ix.netcom.com

A quick item before we go. Thanks to Hap Holly,
KC9RP of RAIN, Newsline will have a booth location
at the upcoming Dayton Hamvention. Hap has
graciously extended an invitation for Newsline to
share his booth. The location number is 719 and we
hope that you can drop by.

For now, with Bill Pasternak, WA6ITF at our editors
desk, we at Newsline say 73 and we thank you for
listening.

[1083]

Newsline #1083 for release Friday, May 15th 1998 to follow.

<*>
The following is a QST

Hamvention '98 is on. This story and more on Newsline report number 1083 coming your way right now!!!

<*>

Hamvention '98 opens

Hamvention '98 is on. The worlds greatest ham radio convention opened on Friday, May 15th, to record crowds.

Hamvention '98 will be held Friday, Saturday and Sunday the 15th, 16th, and 17th at Hara Arena located in Dayton, OH. Sponsored by the Dayton Amateur Radio Association, Hamvention '98 will sport many changes including major traffic pattern changes. Forums will now start at 8:00 am each day. All forums are now in enclosed rooms. DX and contest forums have been moved larger rooms. Walk-in amateur exams. A new banquet location and new for this year, information booths located

throughout the Hara Complex. This years Hamvention features over 250 indoor exhibitors. With the largest Amateur Fleamarket in the world. Consisting of 2,500 plus spaces.

Activities at this years Hamvention gets underway on Friday morning when the fleamarket opens at 8:00 AM. Indoor exhibits open at 12 noon. The fleamarket opens at 7:00 AM on both Saturday and Sunday along with indoor exhibits at 8:00 AM.

Ronnie Milsap, WB4KCG will be the guest speaker at this years gala banquet to be held at a new location for '98 - the Nutter Center at Wright State University located in Fairborn, OH. Milsap, an award winning singer will perform in concert following the presentation of the prestigious Amateur of the Year, Special Achievement and Technical Excellence Awards.

Talk-in to Hamvention '98 will again be provided by the Dayton Amateur Radio Association on the clubs 146.94 Dayton repeater.

Hamvention '98 - the greatest spectacle in Amateur Radio.

A complete report on Hamvention '98 next week.

(Via Newsline)

<*>

Ham radio open Town Meeting

The second annual Ham Radio Open Town Meeting of the Air can be heard this Sunday, May 17th in Real Audio direct from Hamvention '98. The Two hour session will discuss the ARRL's call for codification of currently voluntary bandplans. Also discussed will be the accomplishments of No-Code Technician class hams who have left repeaters and have left their mark in other areas of VHF and UHF ham radio. The session will be netcast from 10 am to noon, this Sunday, May 17th. To hear the session visit our website at:

www.arnewsline.org

and click on the link to the Hamvention Town Meeting.

(Via Newsline)

<*>

WRC '99 and the ARRL

The American Radio Relay League says that it is gearing up for the 1999 World Radio Communications Conference. While nothing dealing directly with amateur radio is on the agenda, there are a number of issues that hams need to watch.

With WRC-97 behind us, preparations already are under way for the next World Radiocommunication Conference. In fact, WRC-97 was barely over before the first Conference Preparatory Meeting for WRC-99 was held last fall. While it's not entirely clear right now if the next WRC will be held in 1999 or 2000, it's still being referred to as WRC-99. The ITU Council may decide the question of when it meets May 20-29 in Geneva. For now, planning on the assumption that the next conference will be held in the fall of 1999.

The FCC WRC-99 Advisory Committee held its initial meeting in February.

Earlier this year, ARRL Technical Relations Manager Paul Rinaldo, W4RI, represented the League on U.S. delegations to several ITU Radiocommunication Sector meetings in Geneva. Working Party 7C met in late February. This committee is responsible for studies relating to the Earth Exploration Satellite Service that has been eyeing the 430 to 440 MHZ band for use by synthetic aperture radars (SARs). These systems are capable of penetrating the upper canopy of a rain forest to monitor ecological changes. Ken Pulfer, VE3PU, who represented the International Amateur Radio Union, introduced an IARU paper expressing concerns with respect to the 420 to 450 MHZ band. An ARRL authored paper also was introduced by the U.S., expanding on the theme and reviewing the status of technical sharing studies.

Working Party 8A met in mid March. This group, Amateur Radio's "home" in the ITU is responsible for the amateur and the amateur-satellite services, among others. Representing the IARU at this session was ARRL International Affairs Vice President Larry Price, W4RA. He introduced an IARU paper detailing progress in HF data communication in the Amateur Service and setting out the characteristics of PACTOR I and II, CLOVER, and G-TOR. Several ARRL papers also were submitted by the US to update existing documentation.

Something called "fixed wireless access" could become a hot topic for Amateur Radio at the next WRC. The idea is to connect user telephone or data equipment via radio instead of wirelines to an access point in the public switched telephone network. FWA proponents are looking at the suitability of more than 100 frequency bands between 27 MHZ and 66 GHz, some of which involve amateur bands. A committee called Joint Rapporteur Group 8A/9B is looking at FWA issues.

The ARRL is heavily involved in preparations for WRC 99 and the meetings to come after it. A good part of the Leagues budget is now devoted to planning and participation in these conferences.

The full ARRL Audio News is at:

www.arrl.org

(Via ARRL, W4RI)

<*>

Hams assist in wake of Italy mudslides

Italian radio amateurs have been active assisting rescuers after devastating mudslides in southern Italy killed at least 91. According to news reports, firefighters in Sarno found one man alive at the base of a well near his house after he was spotted by an unidentified ham radio operator who called for help.

The mud has also washed out telephone service to the affected cities making ham radio an important communications pipeline. Authorities say that the mudslides were brought on by days of heavy rain.

(Via news reports)

<*>

Tennessee tornado follow-up

Amateur radio operators played a major role in spotting a tornado which ravaged Lawrence County Tennessee on April 16th.

According to Bill Phillips, WD4KQV, it was the Lawrence County Skywarn Net operating on the W4RDM repeater that was the first to report the tornado entering the county about 5:50 PM. Information provided by the Skywarn net was relayed to the National Weather Service Office in Nashville,

and to media outlets in Lawrenceburg and Huntsville, Alabama.

After the tornado cleared the county, Skywarn members began an immediate damage assessment. Hams also pinpointed the path of the tornado to within 200 yards.

Amateurs were again utilized on April 17th. This, to complete the formal damage assessment which eventually led to Lawrence County being named a Federal Disaster Area.

(Via WD4KQV)

<*>

Red Cross honors NY RACES

The American Red Cross of Northeastern New York has recognized the role amateur radio played in last January's Ice Storm relief operations and the continued support hams provide the disaster relief agency throughout the year. The Annual Good Neighbor Award recipient for 1998 was presented to the group on April 28th in Albany. Anthony Pazzola, WB2BEJ and April Stack, K2ZCZ, accepted the award on behalf of all New York State ARES and RACES amateurs operators.

(Via K2ZCZ)

<*>

Deer hunting help

A ham out deer hunting last November may have saved the life of another ham visiting the region. John McClellan, KB8GGK, was out hunting on the last day of Deer Hunting season when he heard an urgent call over the Cherryland Amateur Radio Club repeater in the Traverse City area of Michigan.

The call was coming from Ken McClurken, KB8VG, who was Traveling through the area from out of town with his wife when he developed chest pains and needed directions to the nearest hospital. McClellan directed the couple to a local hospital. Another ham, Jane Newton, KC8HJQ heard the call and dialed the local 911 emergency line. KB8VG was released from the hospital a week later and returned home to Grandville, Michigan to recuperate.

(Via ARRL)

<*>

New RTTY Journal

Bill Henry, K9GWT, says that he is bringing back the popular RTTY Journal as the New RTTY Journal. Henry, the president of HAL Communications Corporation purchased the assets of the failed publication from Dale Sinner, W6IWO, who published the magazine from 1986 until 1994.

Henry says he'll try for a leaner magazine and expressed hopes to begin regular printing this summer. The introductory price for an annual subscription will be $12.00 in the U.S., Canada, and Mexico and $17 elsewhere.

(Via news release)

<*>

New ham repair service

And two former Alpha/Power Corporation employees have started up their own ham radio servicing bureau. Dave Wilson, AA0RS and Brad Focken, K0HM, have opened Frontier Engineering. You can contact:

Frontier Engineering
P.O.Box 837
Platteville, CO
80651

or e-mail the company at:

frontier@lanminds.net

(Via ARRL)

<*>

Time gentlemen time

Attention hams who must know exactly what time it is. Q News reports that an Australian company, HPM Technologies, has launched the world's most advanced time system. Called Telechron, the clocks are stand alone units which are automatically corrected for time at least 4 times per day from a paged radio signal. Reportedly, the systems accuracy is better than 250 milliseconds.

(Via Q-News)

<*>

Newsline financial crisis update

We have another update on Newsline financial crisis.

We would like to thank everyone who has responded to our funds request. Thanks to some quick work and sacrifices by our own news anchors and producers we were good for another week.

Thanks to the present response from you, our listeners we are now good through mid June. Please, we ask that you all respond so that we can continue this service into the future!!!

All the feedback we have gotten from you so far would indicate that this is a service that you value highly. If everyone who uses this service would respond, we could insure it's survival.

We will keep you posted.

The address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California

(Via Newsline)

<*>

Private FCC inspections

The FCC is outsourcing another of its duties. The agency has amended its Rules to permit the Commission to use FCC licensed technicians in private sector organizations to inspect all U.S. ships.

Inspections are required by statute or treaty for compliance with the Communications Act of 1934 and the international Convention for the Safety of Life at Sea. Ship inspections had, until now, been an important part of the duties of the FCC's Compliance and Information Bureau.

(Via FCC release)

<*>

Stanford and Smith to retire from FCC

Gary L. Stanford, W4FDP, the associate bureau chief in the FCC's Wireless Telecommunications Bureau, has retired, effective May 1. Stanford joined the Commission in 1961.

He retires as Associate Bureau Chief for operations within the Wireless Telecommunications Bureau in Gettysburg.

And Richard M. Smith announced that he will be leaving his position as Chief of the Commission's Office of Engineering and Technology at the end of June to pursue other opportunities. Smith, the Chief of the Office of Engineering a Technology since 1994, has been the senior engineer responsible for providing technical, engineering and scientific direction for matters before the Commission, including the recent Digital Television proceeding.

(Via FCC release)

<*>

GB2RS cancels 20 meter transmission

On the international scene, the Radio Society of Great Britain says that it has terminated its experiment with a 20 meter GB2RS bulletin service. The RSGB spent last winter experimenting with an SSB voice bulletin transmission on 14.308 MHZ. It evaluated the results and found that a regular listener ship cannot be established for such a service. GB2RS transmissions will continue on 1.990, 3.640, 3.650 MHZ and 7.040 MHZ at their regularly scheduled times.

(Via RSGB)

<*>

70 MHZ U.K. ham casts

The Radio Society of Great Britain is currently experimenting with GB2RS news broadcasts in the U.K. 70 MHZ band. The transmissions are currently taking place on 70.425 MHZ on FM from the home of G3LEQ in Cheshire. If you are surfing the bands listening for overseas propagation, these transmissions are a good indicator that the bands are open, at least through the top of the Region 2 six meter band. Reception reports go to Gordon Ames, G3LEQ, at his callbook address.

(Via RSGB)

<*>

F6FBB listserver

If you are a user of the F6FBB Amateur Radio Bulletin Board Software, there is now a listserver for you. The F6FBB list is available to all sysops and users alike for information exchange. If you are interested in learning more or sharing of information send e-mail to:

listserv@phx-az.com

In the body of your message type subscribe f6fbb-list.

(Via F6FBB)

<*>

Hervey Bay

While many clubs in northern Australia have club nets, the Hervey Bay Club is the only group providing it's members with six, count them, six CW club nets. Headed up by VK4OH, the Hervey Bay nets meet Monday to Friday at 8:30 am and again on Fridays at 7:00 PM. All nets operate on 3.528 MHZ.

(Via Q-News)

<*>

New head of ARRL RF Safety Committee

Closer to home, ARRL President Rod Stafford, W6ROD, has appointed Greg Lapin, N9GL, as chairman of the RF Safety Committee. Lapin holds a PhD in electrical engineering from Northwestern University and is a member of the IEEE. He succeeds Bill Raskoff, K6SQL, who served as chairman for several years.

(Via ARRL)

<*>

DX

In DX, some news about the upcoming 1998 JW operation by Carlos Ferreira, LA9PJA. Ferreira says that he thinks that it will be possible to operate from the Svalbard Island from June 12th to the 16th. Carlos adds that these dates are still tentative based on flight availability and weather conditions.

(Via LA9PJA)

What could be the first 2 meter transequatorial propagation in the current solar cycle has been reported. JR4ENY reports that on April 16 at 10:59 UTC, JH4JPO in Yamaguchi, Japan, monitored the Darwin, Australia, VK8VF CW beacon. That beacon operates on 144.480 MHZ and the path distance was approximately 5,000 miles. The opening lasted until 11:25 UTC.

(Via VHF Reflector)

Meantime in the United States, a new solid state transmitter has just been installed at the W3VD six meter beacon. According to Bob Carpenter, W3OTC, writing to the VHF Reflector, power output is 10 watts. At the moment the frequency is 50.065 kHz but it may be moved to 50.064 in the future. The beacon is located in grid square FM 19.

(Via W3OTC)

<*>

Cellfone Armed

Owning a cellular telephone can get you arrested. Just as the trucker recently found out when he was taken into custody in Los Angeles because another driver thought his telephone was a gun.

According to news reports, the incident took place in late March. California Highway Patrol officers arrested the unnamed truck driver early in the morning on the southbound Interstate 405 freeway at Imperial Highway. This, after the driver of a sports utility vehicle reported the trucker had pointed a weapon at him.

Police say that the big-rig driver pulled out a cellular phone to make a call. The other motorist thought it was a gun and he called for help on his cell phone. The truck driver was initially charged with allegedly brandishing a firearm at another motorist. He was released after investigators determined the object was a cellular phone, not a gun.

(Via published and broadcast news reports)

[1080]

Newsline report number 1080 for release on Friday, April 24, 1998 to follow.

<*>

The following is a QST

This may be the last ever Newsline Report you hear. Find out why on Newsline report number 1080 coming your way right now...

<*>

This may be the last Newsline Report

Newsline is in major financial difficulty and this could be the last time you ever hear it. Andy Jarema, N6TCQ, is Newslines' Support Fund Administrator. He says that there is no money left at all to keep the service going and the plug could be pulled this week:

"I have instructed Newslines' editor to take us off the air in one week unless something drastic in contribution receipts occurs. Month after month, Newsline receives average receipts of under 30% of what it costs to gather the news and produce a report. It does not take an accountant to realize what this means.

Many of you have written to tell us what the Newsline service means to you, but this seems to be a small corps of supporters. But there are thousands of Amateur Radio clubs here in the United States and around the world that retransmit the weekly Newsline newscast. Their members are receiving a service.

Why their members do not feel it an obligation to help to support this type of service?

We only hear from an average of 100 or less clubs a year. We don't want to be the P.B.S. (Public Broadcasting System) of Amateur Radio, always going to a 'pledge break'.

If you want to keep this service, we need to hear from you NOW! If the service is silent next week, a lot of your nets will not be getting the late breaking news about Amateur Radio that you have grown accustomed to receiving on a weekly basis.

You will be without this information. It is all up to you. One week!

Please, after so many, many years of Newsline service, don't let it end like this." Andy Jarema, N6TCQ

If you want Newsline to be here next week, and for the weeks that follow, then only you can save it. The Address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

If you missed the address it will be repeated at the end of this weeks newscast.

Nashville Tornado Ham Help

Ham radio operators in and around Nashville, Tennessee are still involved in the aftermath of tornadoes that swept through the area a week ago.

Amateur Radio springs into action as two tornadoes ripped through the Nashville, Tennessee area last Thursday afternoon the 23rd. Approximately 100 people were injured by flying glass and blowing

debris. While one man who was hit by a falling tree in Centennial Park was listed in serious condition following the destruction of the tornados.

Amateurs were first called out at 7:00 AM by the National Weather Service to man the local Amateur Skywarn Net. Robert Harris, N4PQV was net control and said things got hairy even before the actual tornados hit.

"Earlier in the morning one of the storm cells we tracked through the Brentwood area. There were, there was one gentleman I do believe it was WD4ICI is a school teacher in Brentwood. And he checked in with net control who was me at the time. He checked in with net control to check on the status of a storm and with the National Weather Service help we had an operator at the National Weather Service that was looking at the local radar. With their help we had the students at that particular school go into their storm watch areas. At that particular time they put them in the hall ways and set them on the floor.

Then a little bit latter on another school just east of that location that we also did the same thing to. And there was a different ham that was local right there at the school had them in the same position because of the storm cells that moved through.

There were three different storm cells move through that particular area that morning. All three of which looked, from the National Weather Service, they looked to be tornadic." Robert Harris, N4PQV

Not only did amateurs man the Skywarn Net for 13 hours, they provided communications for the Office of Emergency Management, the Red Cross, and Damage Assessment teams after the tornados knocked out virtually all cellular and land based telephone systems.

Weather service officials say that more storms could threaten the area before the tornado season comes to an end. The hams say that they are ready if this should occur.

<*>

Virginia Governor signs statewide Ham Antenna Bill

Hams in Virginia win an important victory as Governor Jim Gilmore signs into law that state's new Amateur Radio antenna bill that limits local regulation of Amateur Radio antennas. The measure requires local ordinances involving the placement, screening, or height of antennas to impose the minimum regulation necessary to accomplish the locality's legitimate purpose.

But it does not end there. The new law also sets a height of 200 feet as the regulatory minimum in localities having a population density of fewer than 120 persons per square mile. It also provides for a 75 feet regulatory minimum height in more densely populated communities. And best of all, localities may not regulate the number of support structures in either case. In other words, a ham can put up as many antennas as he or she wants.

Bob Ham, KK4IY, of Vinton, Virginia was the prime mover behind the bill. He worked with state Senator John Edwards of Roanoke to get it into the legislature and get it enacted into law. It goes into effect on July 1st.

(Via ARRL, others)

<*>

Southern California APRS

One of the few holdouts in the "APRS QSY" movement may be changing its mind. At a recent meeting of Southern California's 2 Meter Area Spectrum Management Association the question was posed as to if there were any objections to the concept of the frequency change. At that time no overt objections were heard and the chairman stated the committee would move forward with the matter. It was also noted that since this was a designation of a simplex frequency, that the Technical Committee could make the necessary decisions in the matter and they would be final.

Amateur Television interests that use 2 meter simplex for an audio intercom were well represented at the meeting as were users of APRS. The only ones who were a no-show were the old time AM'ers who steadfastly refuse to recognize the existence of any mode other than theirs. Either way, it now appears as if the APRS QSY proposal is on track for a possible acceptance in Southern California. As we go to air, no target date for the frequency

shift to take place has been announced.

(Via public notice)

<*>

Ham Radio bumped from Circus Train

After thirty years of dedicated service, ham radio has been kicked off the annual run of Wisconsin's Great Circus Train to make way for commercial communications. Circus World Museum which sponsors the annual rail event cites severe space limitations for its decision to drop ham radio in favor of an offer of free digital and analog communications services.

The Great Circus Train runs each summer between Baraboo and Milwaukee. Baraboo is where the Ringling Brothers Circus got its start in 1884. Milwaukee is the site of Wisconsin's annual Great Circus Parade.

Ham radio first came aboard the circus train in 1965. This, when an ARES member named Don Evenson, K9JYX, got permission to install a VHF station in one of the cars. That station relayed messages to an High Frequency mobile station that was chasing the train. As the years progressed, improvements in VHF technology simplified communications. In 1994 onboard HF gear was added to complete the ham station on the rails.

But now that's all gone. The museum says that it evicted the hams because it is attempting to eliminate as much clutter as it can from the train cars. This, to open up more space for the passengers. As a result, all communications will be provided by a commercial communication supplier named Primeco instead of the Wisconsin amateur radio community.

(Via various sources)

<*>

FCC comes down on unlicensed ops

The FCC has gone on the war path against unlicensed stations. On April 2nd, the Commission issued Orders to Show Cause and Notices of Opportunity for Hearing against five people the agency says are operating unlicensed FM transmitters and are refusing to follow government orders to shut them

off.

Hit with the notices are unlicensed operators in Lender Texas, San Marcos, Texas, Cleveland, Ohio, Oroville, Washington and Chewelah, Washington. All are charged with continuing unlicensed FM broadcast operations. This, despite warnings from the Commission that the unlicensed radio transmissions were in violation of Section 301 of the Communications Act of 1934.

Each operator has been notified that he faces a possible fine of $11,000 and each has been told that he can request a hearing before the FCC.

(Via FCC release)

<*>

Mann removed from MIREX

Miles Mann, WF1F, the Director of Educational Resources for the Mir Amateur Radio Experiment or MIREX appears to have been relieved of all official duties with the group.

In a public notice posed to the Amsat North America bulletin board, MIREX President, Dave Larsen, N6CO, says that as of Tuesday, April 21, 1998, Mann is no longer a member of nor a spokesperson for MIREX. Larsen says that any actions or comments made by Mann as of April 21st, are to be considered to be of his own volition and not those of "MIREX".

No reason was given by Larsen for Mann's removal from his post but Larsen did say that he regrets Mann will no longer be a part of the MIREX team.

<*>

Three East NY DECs quit

Three Eastern New York Section Amateur Radio Emergency Service officials have quit their appointments as District Emergency Coordinators. The three resigned from the program "en masse" in an e-mail message sent to ARRL Field Services Manager Rick Palm, K1CE.

Those leaving the program are District Emergency Coordinator for Administration and Operations April Stack, K2ZCZ, Northern District Emergency

Coordinator Tom Woznack, N2SQO, and Central District Emergency Coordinator Ken Goetz, N2SQW. Goetz also serves as the New York State RACES Radio Officer.

No reason was given for their decision resign.

(Via Hudson Division Loop)

<*>

Alinco VHF+UHF "Credit Card" HT

Just in time for Hamvention '98, Alinco has announced the introduction of its new credit card sized dual band Handy-Talkie.

The DJ-C5T covers 144 to 148 MHZ on 2 meters and 420 to 450 MHZ on the 70 centimeter band. While only slightly larger and thicker than a credit card the HT does have an internal speaker and lithium ion battery. The tiny radio has 50 memories, CTCSS encode and decode, a removable rubber coated antenna and includes AM aircraft band receive.

Alinco says that the DJ-C5T has already won FCC type approval and is expected to be available at its dealers in mid-May. While no pricing has been announced, the company says that the anticipated "street price" of the radio will place it among the most affordable dual band HT transceivers.

(Via Alinco release)

<*>

Kit building at Hamvention '98

And kit building is making a big comeback in ham radio. In fact, its fast becoming the newest old fad to hit the service in years.

So as to accommodate the growing number of requests for more information in this almost lost art, Joe Eisenberg, WA0WRI of Lincoln, Nebraska is teaming up with some of todays hottest kit makers to host a first-ever Kit Builders forum at the 1998 Dayton Hamvention. Eisenberg tells Newsline that just like the song, everything old is new again:

"What we are going to do is to try to show people the fun of building kits. We will even try to have a soldering iron for someone to try his hand at building with. We are going to show all the fun it

is to put together kits and then make QSO's using gear you have built yourself." Joe Eisenberg, WA0WRI

Eisenberg says that he will be joined by a number of todays popular kit manufacturers:

"We will have representatives from Ramsay Electronics, Ten-Tec, Elenco, the G-QRP Club and Electronic Rainbow." Joe Eienberg WA0WRI

WA0WRI's Kit Builders Forum takes place on Friday afternoon, May 15th at the Hara Arena in Dayton. For more information on this and other exciting Hamvention events, visit their website at:

www.hamvention.org

(Via Newsline, WA0WRI)

<*>

Windtracks '98

It's spring and its time for hams to start launching and chasing more radio equipped balloon flights.

It was a perfect day for flying the blue skies of Indiana. Frosty temperatures greeted two dozen Green Field High School students as they prepared to launch Windtracks 16. A high altitude balloon experiment. The nine pound payload containing 3 amateur radio transmitters and equipment soared into the skies over central Indiana and began its 68 mile trek south east toward Kentucky. The balloon burst at 65,000 feet, but not before sending back sharp color pictures from its two onboard cameras.

Students at the high school and at a second elementary school in South Port, Indiana monitored the balloons progress via the onboard gps packet system.

Eight chase teams converged on a small farm near Milan, Indiana to recover the parachute and transmitter packages from the top of a 70 foot tree. It took nearly two hours to cut all of the packages free. Students at both schools ran all the radios used to communicate with the chase teams.

The next launch is set for 12:00 UTC on Saturday, April 25th from the Challenger Center in Brownsburg,

Indiana.

Hams can view live and archived pictures of
Windtracks flights via the web at:

www.windtracks.org

(Via Amateur News Weekly)

<*>

Noisy planet

The blue planet Earth may be too noisy for radio telescopes. This, as radio astronomers say that signals from communications satellites, cellular phones and pagers are hampering efforts to search the skies.

One case in point involves the ten radio telescopes that stretch from Hawaii to the Virgin Islands. One astronomer at the University of Iowa, says that all this modern telecommunications equipment is operating in the upper UHF and microwave region are emitting radio waves are disturbing radio astronomy.

Some astronomers say the only solution is to limit the amount of RF that is emitted into the bands that they use to search the skies. Others go so far as saying that its time to start plans to build a radio telescope on the far side of the moon. This, they say will shied it from noise generated on the Earth and from satellite in Earth orbit.

International - Help catch a U.K. Thief

In international news, word that police in the United Kingdom are asking hams around the world for help in solving a robbery that took place at about 22:00 UTC on Friday, March 27th in the town of High Leigh near Cheshire. Witnesses say that those involved in the crime were using two-way radio gear to communicate with someone that they believe to be an accomplice.

The police say that have no idea of what frequency band the criminals may have been talking on or where the third person was located. They are asking anyone who may have heard a suspicious conversation to call Detective Sargent Lowe or

Detective Constable Ryder at the Winslow police barracks. The phone number is international dialing plus:

01-224-613-643.

(Via GB2RS)

<*>

International - Hard politics in VK-LAND

Meanwhile, from down under comes news that Peter Naish, VK2BPN, is the new president of the Wireless Institute of Australia. Naish defeated incumbent Neil Penfold, VK6NE, at what can only be termed as a tumultuous annual meeting of the society that took place on March 28th and 29th in Melbourne.

According to Australia's Q-News, The meeting got off to a tenuous start when a major portion of the business agenda was declared out of order. This, because it was publicized improperly before the meeting took place.

When parts of the agenda finally were taken up, a politically volatile proposal was introduced. Some divisions want voting rights for divisions at Federal Meetings to be based on the number of members in a division, It was voted down for the second time in two years.

The overall meeting agenda could not be completed within the two days scheduled to complete it. As a result and the group will reconvene at a later date.

<*>

DX

In DX, Scottlands' Otley Amateur Radio Club will mount a DXpedition to Bute Island for this year's IOTA Contest. The event takes place July 25 and 26th. Their entry will be Multi/Single. A special callsign has been applied for.

(Via QRZ-DX)

And this years Islands On The Air Convention will be held May 1st to the 3rd, at Las Palmas in the Canary Islands. This is an unique opportunity to attend one of the most important conventions in

Europe. For more information go to the shows website at:

www.ure.es

(Via IOTA)

And the ARRL Membership Services Department has announced the appointment of Bill Moore, NC1L, as the Century Clubs Branch Manager. His new duties became effective as of April 20th.

(Via ARRL)

Lastly, another record has been set on the new UK 136 Kilohertz band by Peter Dodd, G3LDO. It happened on March 21st when Peter made contact with OH1TN in Finland. This is amazing when you consider that G3LDO was only running 150 watts into a 45 meter long wire while OH1TN used similar power into a 28 meter high vertical.

(GB2RS)

*****

Blinking CW

And finally, word that not knowing the code can be expensive an expensive proposition. At least it was for one branch of the U.S. Military.

In the conflict between the pro and no-code segments of our hobby, one side usually brings up the argument that the military has abandoned the use of cw. In a recent set of sea trials by two vessels of the U.S. Navy, a combination of tests resulted in a total breakdown in conventional communications. Messages concerning maneuvers, course and speed had to be relayed in morse code by blinker lights. This once common naval communications mode is evidently a lost art. Because the inability to quickly transmit and receive the messages involved resulted in an aircraft carrier backing into a cruiser at considerable speed. Damage to both ships totaled over $10,000,000.

It's not known if the problem with the Navy's blinking light CW was on the transmitting or the receiving end.

[1079]

Closed Circuit Advisory

The following advisory is not for transmission over amateur radio. As spring and summer approach, we are again forced to ask our listeners for their financial support. According to our Support Fund Administrator, we currently have only enough in the bank to keep going through the middle of May. And that does not take into account our fixed annual expense in presenting the annual Young Ham of the Year Award to some worthy young radio amateur. Our administrative costs in that area alone is in excess of a $2,000.

So please help by contributing what you can, as soon as you can to the Newsline Support Fund. The mailing address is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1079 for release on Friday, April 17, 1998 to follow.

<*>

The following is a QST

Hams take the lead when a powerful tornado rips through central Alabama, mandatory bandplans may be on the way and the ARRL says it wants hams to arbitrate rather than litigate. These stories and more on Newsline report number 1079 coming your way right now.

<*>

Birmingham Tornadoes

At least 30 people were reported killed in the wake of a devastating tornado that tore through residential communities in Jefferson county, Alabama. Before, during and after the storm, amateur radio operators played a major role.

The first amateur radio report of Alabama's worst tornado to strike since 1932. It was a storm of rare magnitude, impossible to see in the night sky. An F5, packing winds estimated at over 260 miles an hour. The tornado rips a nearly 30 mile path of destruction as it plows through neighborhoods barely 10 miles west of Birmingham. 1200 homes are destroyed or damaged. With rescue crews unable to get through streets covered by fallen trees and power lines, some storm victims lay trapped in debris for hours. That leads to calls for help on the 147.140 repeater. One of those responding is emergency medical technician Janice Rock, KF4PVR:

"There was a ham radio operator who was on the scene. He couldn't hit the repeater with his HT. So we, as soon as we got there. We were all simplex, were able to talk to him and relay information back about how bad it was. And he warned us before we got there about how bad it was. I've never seen anything like that." KF4PVR

A man bleeding from a head injury needs to be taken to an ambulance. But debris covering the ground makes vehicular access impossible. Rock and two others find a front door in the debris. They take turns, carrying the man on the door through nearly a quarter of a mile of downed trees and pieces of homes to an ambulance.

"We spent a lot of time going from house to house asking people to put candles out. The gas was just

hanging in the air. Multiple gas leaks. There was one lady that we went after who was in a storm shelter who was injured trying to get to the storm shelter. And when we got there they had already gotten her out. From what we understand she didn't make it." KF4PVR

A veteran of disasters turns out to be a victim himself. Mark Parmley, WA4UHC, is the Birmingham Amateur Radio Clubs Director of Emergency Communications. Parmley lives in Edgewater, one of the communities pounded by the deadly storm:

"I knew about the warning about twenty minutes before it actually hit. They were talking to the Skywarn Net Control at the time and heard it coming. Just fifteen seconds to react. There was a real dull roar off in the distance. But, I could tell it was coming toward us. And it was real low frequency. The ground was shaking. We were praying like crazed and had our fingers crossed. That was about all we could do." WA4UHC

Parmley and his girlfriend ride out the tornados attack while sitting in a bathtub with a large cushion over them. They escape injury, although the house sustains damaged.

As the storm moves northeast, its fury never lets up. Members of ALERT, the Alabama Emergency Response Team, stay on the air, helping the National Weather Service track the storm. Five churches within a one mile area are leveled. The tornado offers stark displays of its awesome power. One home is gone, while the house next door might have lost a shingle. Canceled checks from storm ravaged areas are found nearly 150 miles away in Georgia.

"Roger, had to park and walk over to the old building which is and eighth of a mile maybe. With radios in hand."

Members of HEART, the Hueytown Emergency Amateur Response Team, activate on VHF and UHF frequencies. They stay busy for nearly 2 days, providing communications support for emergency management and Red Cross operations. President Clinton and Vice President Gore visited the disaster scene. They promise to do everything possible to help victims rebuild from a disaster Alabama will never forget.

The mighty storm barely missed making news elsewhere. Had it maintained its course on the ground, it would have hit high rise buildings in downtown Birmingham just four miles to the east, and two miles beyond that, the Birmingham Airport. To learn more about what the Birmingham amateurs did, go to the ALERT website at:

www.bandmaster.com/alert

(Via Newsline)

<*>

Nashville Tornado

Hams went on alert as a series of deadly tornadoes swept across parts of the south on Thursday, April 16th. The worst of the twisters was rated at an F3. It set down near Centennial Park in Nashville,, Tennessee. That's where it ripped off roofs in the downtown area, knocked over at least one eighteen wheeler on the nearby interstate highway and splintered mobile homes in rural areas.

Ham radio severe weather spotters have been active since the first warnings were issued by the National Weather Service early in the day. As we go to air about 12 hours after the twisters hit, hams are still at work. Some are providing back-up relief communications across Tennessee. Others are donating their time as storm spotters in Alabama, Georgia and western North Carolina.

The National Weather Service says that the worst may be yet to come. This is because mid April is traditionally the worst month for these kind of killer storms.

More on this tornado story in a future Newsline report.

(Via Newsline compiled from various reports.)

<*>

Cincinnati Storms

Another area hit by the wrath of Mother Nature were parts of Indiana, Ohio and Kentucky. There, hams went on alert wondering if tornadoes were on their way.

Severe weather rocked the tri-state during the early morning hours of Tuesday, April 7th.

Amateurs from northern Kentucky and Cincinnati, Ohio were awakened from their beds to an early spring storm. Many amateurs checked in to the Cincinnati Skywarn Net held on the 146.88 repeater.

"Yes, I'm here in Lakeside Park. Do you copy? We are having very large hail. Appears to be at least 3/4 inch in diameter. It is very windy. I'm at a high point, my second floor. I'm not seeing any rotation or nothing. There is an awful lot of lightning and it's very windy.

Roger, Lakeside Park in Kenton County. 3/4 inch diameter hail, very windy. Net stand by."

The storm, with golf ball sized hail and high winds caused frayed nerves and some minor property damage. But, luckily no personnel injury.

Possible mandatory adherence to bandplans

The ARRL has filed its long awaited request to the FCC to codify adherence to what have been till now, voluntary bandplans. Following up on action taken at the January ARRL Board of Directors' meeting, the League has asked the Commission to equate observance of voluntary band plans with good amateur practice.

The League filed its request for a declaratory ruling on April 3rd. In it, the national society asks for codification of several points of ham radio

operation. First, it wants the FCC affirm that any amateur radio operation that conflicts with established voluntary band plans, and which causes interference, or, adversely affects those operating in accordance with these band plans to be considered as being in direct violation of FCC rules. It also requests the Commission direct that hams should be familiar with current voluntary bandplans and that they are required to abide by them. Finally, the ARRL wants the FCC to state that those radio amateurs who don't operate in harmony with those band plans are not operating in accordance with good amateur practice.

The League has asked the FCC to issue this Declaratory Ruling as fast as it legally can. Other

hams who oppose mandatory bandplans are vowing a court fight if the Commission proceeds without first issuing a Notice of Proposed Rule Making and permitting them time to comment.

As previously reported, Newsline will be presenting a live to the internet debate on this ARRL request from Hamvention '98 next month. This netcast takes place at 10 AM Eastern on Sunday, May 17th. A hot link to the Real Audio server will be available from our website at:

ARRL to hams: Arbitrate - don't sue

The American Radio Relay League is going to try and stop the escalating level of ham versus ham lawsuits. This, by getting radio amateurs to first try arbitrating their ham radio related disagreements.

The League has inaugurated an arbitration service for hams, ham organizations, citizens and other groups having disputes relating to Amateur Radio. The ARRL Arbitration Service offers a substitute for litigation by providing binding arbitration to settle disputes. Arbitration will be arranged through the office of Chris Imlay, W3KD, the League's General Counsel. Arbitrators will include ARRL volunteer counsel. Potential cases could involve neighborhood interference situations, disputes within local radio clubs, disagreements between a hamfest committee and an attendee or exhibitor, or even the use of a frequency, typically, but not necessarily, involving one or more repeaters.

Creation of the Arbitration Service is the first step toward a complete Alternative Dispute Resolution system, as envisioned by the ARRL Board at its January 1997 meeting. The ADR system ultimately could include mediation and non-binding arbitration.

Cases may be instituted under the ARRL Arbitration Service by filing a signed Arbitration Agreement together with the $50 per party filing fee with the Leagues' General Counsel. For complete details on

this service, contact:

ARRL General Counsel
Christopher D. Imlay
5101 Wisconsin Ave North West
Suite 307
Washington, DC
20016

Wireless privacy bill passes house

>From Washington, word that HR 2369, also known as the Wireless Privacy Enhancement Act of 1998, has passed the House of Representatives. The house passed version of the bill includes a report that specifically resolves concerns that the Amateur Radio community raised with the staff of the House Telecommunications Subcommittee.

When HR 2369 was first introduced, the American Radio Relay League feared that it unintentionally could have outlawed all out of band operations including MARS and Civil Air Patrol, as well as most scanning and short wave listening. Working with the office of the bills sponsor, representative Billy Tauzen, the ARRL and the hobby radio industry got the language changed so as to protect the legitimate concerns of radio enthusiasts.

The bill now awaits action in the Senate.

(Via ARRL and other published news reports)

<*>

No I-Phone fees

If you use Internet Phone for repeater linking, we have some good news for you. For the time being, making calls over the Internet will remain free of tariffs other than regular Internet Service Provider fees.

In a report to Congress, the Federal Communications Commission, says it is not ready to conclude that the long-distance calls carried over the Internet or other data networks should be regulated as a

telecommunications service. That could change, says the FCC, but not anytime soon.

(Via published news reports)

<*>

FCC Electronic filings

The FCC has amended its rules to allow the public to file comments and other pleadings electronically via the Internet in many rulemaking proceedings. Starting later this spring, the FCC will permit electronic filing in most notice and comment rulemaking proceedings, most proceedings involving petitions for rulemaking, Notice of Inquiry proceedings, and petitions for reconsideration.

(Via FCC release)

<*>

ULS Comment deadline announced

The FCC has also set May 7th as it's the deadline for you to file your comments on the agency's proposal to expedite the creation of a Universal Licensing System. Your letters must address WT Docket 98-20. Reply comments in that proceeding are due at the FCC no later than May 22nd.

(Via FCC release)

McKim killer sentenced to life

Alan Eugene White, KA0QNB, has avoided the death penalty for the brutal bludgeoning deaths of a 5 year old boy, his grandmother and his great grandmother, but he will spend the rest of his life in prison.

Alan, Eugene White, KA0QNB, avoided the death penalty on Friday, April 10th for a triple murder in Salina, Kansas in 1996. White, 27, pleaded guilty to the murders of Christopher Abercrombie, Carol Abercrombie and Dolores McKim. The widow of Jim McKim, W0CY. He will spend the rest of his life in prison. White was sentenced to 157 years without the possibility of parole.

Prosecutors decided not to seek the death penalty after relatives of the victims accepted a plea bargain in which White agreed to a video taped

confession and to answer any questions that the victims families might have. And to give up his right to appeal or to seek clemency.

When asked by the judge, if he understood that he would spend the rest of his life in Prison, White answered yes.

There will be no appeals and no more court appearances.

White was arrested several months after the crime at a homeless shelter in Boston after being profiled on the Fox television program America's Most Wanted. While the plea bargain spares his life, it also means he will never again see the light of day outside of prison bars.

APRS World Internet Network

Turning to APRS news, Bob Bruninga, WB4APR, the father of the mode and winner of this years Dayton Technical Achievement Award reports that his working group is making good progress in established an Internet linked ground station network for amateur satellites. As we go to air, Bob says that there are full time sites on line in Maryland and in Mexico city with others scheduled to join from Texas, Illinois, Argentina and South Africa. There is also progress with reporting stations in California, Hawaii, Taiwan and Australia.

Still needed are feeds from Japan, eastern Europe and any other areas more than 1000 miles from any other site. Those interested in taking part can contact Bob at his call book address or by e-mail to:

bruninga@nadn.navy.mil

You can also get to meet Bob if you attend the Dayton Hamvention.

(Via VHF Reflector)

<*>

Sedan Network Expansion

KC8GOQ says via the AMSAT BBS that he is looking for some packet radio operators in Michigan, Indiana, and Ohio who would like to set up a packet node that would connect into the SEDAN network. The SEDAN network is a very large packet radio intertie currently located along the east coast but does not provide service into the upper midwest. Its website is:

www.sedan.org

KC8GOQ says that he is trying to start a branch that would eventually link up to this network. If you live in the area and are interested in this project, contact Chris via e-mail to:

kc8goq@aol.com

(Via AMSAT-NA BBS)

<*>

NYC 10 GHz beacon

A new flea power 10 Gigahertz beacon has been placed into operation from the top of the World Trade Center in New York City. Del Schier, KD1DU, reports via the VHF Reflector that the beacon was established by Larry Lipitz, NY2US. It operates on 10368.210 MHZ and runs 80 milliwatts output to a slot antenna. The location is some 2200 feet above the surrounding concrete average terrain.

(Via VHF Reflector, KD1GU)

<*>

Manitoba Canada SM elected

>From the international wire, Radio Amateurs Canada reports that Patricia Giesbrecht, VE4PLG has been elected as the Section Manager for the Canadian Province of Manatoba. This, for a two year term that will begin on July 1st. VE4PLG ran unopposed, eliminating the need for a balloted election.

(Via RAC)

<*>

Marconi Day to be celebrated on April 25

And this year International Marconi Day will be celebrated on inventors actual birthday. That date is Saturday, April 25th and numerous radio clubs around the world have announced that they will be

active with commemorative stations. How many? Far to many to list all of them here.

(Via International Marconi Day Commission news release)

<*>

DX

In DX, I4LCK reports that his recent operation from Mozambique netted almost 11,000 contacts. The operation ran for thirteen days, used the callsign C91LCK.

(Via I4LCK)

And the U.S. Islands Awards Program club station KL7USI will be active from Islands On The Air location NA-041. That's in Alaska with the station operational from June 6th to the 13th. 14.260 MHZ will be for phone contacts. QSL direct or to the operations website at:

www.eng.mu.edu/~usi

(Via IOTA)

And a new world-wide six meter world wide dx club has been formed. According to N0EDQ and KA0NNO, you can get information about it by going to their site on the world wide web at:

http://6mt.com/club.htm

(Via VHF Reflector)

Also 3W5FM in Vietnam has been heard on 20 meter CW. Check around 14.007 MHZ beginning at 13:30 UTC and also between 23:00 to midnight UTC. 3W5FM can be heard daily on 1.826 MHZ on 160 meters around his sunrise. QSL via:

UA0FM
P.O. Box 66
Vladimir City,
630011, Russia

(Via Modern DXer)

And listen for Nepal coming this summer to 160 meters. Word is that 9N1AA, is nearly done building his new home. Once completed, he will have the capacity to be active on all bands and all modes. He hopes to be active by the end of July or

early August. The good news is that he already has permission to go over his neighbor's property to tie off the far end of his 160 meter wire antenna.

(Via OPDX)

<*>

Foxhunting Weekend

And finally, do you want to be a world champion? International style radio direction finding, or foxhunting, is coming to America. The ARRL recently appointed Joe Moell, K0OV as the United States Amateur Radio Direction Finding Coordinator. Here he is with the third and final report in his series on the National Foxhunting Weekend.

Last week I told you how hidden transmitter hunts in many countries of Europe and Asia closely resemble Orienteering meets, when hunters run or trot or walk--through a large woods looking for hidden fox transmitters. There's a movement afoot to bring this kind of radio orienteering to the Americas, so we can compete for World Championship medals.

There have been two such formal events here in southern California, and more are in the works. But the biggest force behind international style foxhunting is the Friendship Amateur Radio Society, or FARS.

Founded in Portland, Oregon about ten years ago, this organization now has chapters in the USA, Canada, Japan and Asiatic Russia. They have held five multi-national get-togethers for camaraderie and ham radio contests, including QSO parties and on-foot foxhunts. They're called the Friendship Radiosport Games.

The last one was in Khabarovsk, Russia last year, and the next will be next year in Portland. If the FARS folks have their way, it will also be the first International Amateur Radio Union Championship hunt to be held here in Region 2, which encompasses North and South America. If you think you have what it takes to be an international radio-athlete, a good way to get started would be to make this kind of transmitter hunting a part of your club's National Foxhunting Weekend activities.

There's more information in the April issue of CQ VHF Magazine, and also on my Web site, which you can access via link from the Amateur Radio Newsline site. See you on the hunt!

Remember, the National Fox Hunting Weekend takes place April 25th and 26th. All the details can be found in the April issue of CQ VHF Magazine.

LOOKING FOR CPI EQUIPTMENT BROKEN OR WORKING!
pkruzel@aol.com

2514. New England balloon launch May 30.

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-17 00:00:00 UTC
From: h1riley@umassd.edu
Message-ID: <355f2bd0.0@gatekeeper.umassd.edu>
Source record: 172082

A ham radio equipped weather balloon will be launched between
1:00 and 2:00 PM, unless adverse weather interferes, from the
upcoming National Weather Service Open House on May 30 in Taunton,
Massachusetts. In case of a postponement, we'll try Sunday, May 31.

The SkyQuest hamradiosonde can be heard on home scanner radios and
VHF ham radios on the 2 meter band at 145.61 MHz FM. It should
be real* easy to hear all over eastern Massachusetts, Rhode Island,
southern New Hampshire, and northeastern Connecticut. After gaining
some substantial height I hope amateur radio operators with more
sensitive receivers will be able to hear the radiosonde from as far
away as southern Connnecticut, New York, New Jersey, Vermont, northern
New Hampshire, and Maine. Maybe even parts of eastern Canada at peak
altitude.

Two temperature channels (inside and out) and altitude will be
measured continuously by means of audio tones. The tones will be
heard for the duration of the flight, going up and down in frequency
as the transmitter switches among the three channels. There will be
an occasional morse code ID.

There is some preliminary information available at the North American
balloon launch website (listed below), but a better way to keep up
with developments (exact launch time, weather forecast, expected flight
track, reception tips, etc.) is to email me with a request to be added
to the SkyQuest mailing list.

2523. Re: The truth about gun owners

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-17 00:00:00 UTC
From: rcrusoe@aol.com
Message-ID: <1998051718590300.OAA23057@ladder01.news.aol.com>
Source record: 172091

In article <355F084E.A24845C5@innocent.com>, Kevin Alfred Strom
<kevin.strom@innocent.com> writes:

>
>And those countries also have almost no Congoids, who, when left to
>their own devices with or without guns, commit violence far more often
>than other population groups.
>
>

Generally, I agree with your position, Kevin, but if I were Black, I would be rather offended by the above paragraph. It leads one to believe that you think crime is a genetic rather than a cultural issue. In fact, maybe I AM offended. You are speaking on behalf of us gun-owners and gun wearers, and I would rather not be branded with the same iron as you just because you share my belief in the right to keep and bear arms. Why not just go ahead and come out and say "Nigger"? A clever euphemism used in an insulting generalization doesn't make it any nicer.

Don't think I am making excuses for the Black race, but having seen first-hand that a kid of any race when raised in the inner-city poor warrens where crime breeds most pestilently, by a single parent especially, has just as much a chance of turning to crime. The factors do statistically show a racial correlation, but this is incidental to cultural factors, and not directly caused by genetic ones.

Here is your homework... dig up all the figures you can on crime committed by RURAL Black youth, and compare it to figures on rural White crime. I bet the statistical differences there become a non-issue. Poverty has nothing to do with it. A loving and most of all attentive upbringing, and healthy outlets for juvenile energy are more important. Sadly, these things are in short supply in our urban ghettoes, and as circumstances have it, a dis-proportionate number of blacks live in these areas.

Now... let me beat the pro-gun drum a moment. Anybody care to explain the fact that places in this country with the strictest gun laws have the highest incidence of violent crime? I am talking about crimes committed both with and without a gun in the hand of the perpetrator. I am told it has nothing to do with the fact that the victims don't have guns, but somehow I have a hard time with that. I know that if I made my living robbing people, or rape was my chief recreational activity, I would much rather be in a place where honest people don't have guns. It would really suck getting shot by somebody who just doesn't agree that I should be allowed to terrorize others just because I want to. No, I think I would go somewhere nice and safe, where people rely on the cops for protection instead of on themselves.

The best deterrents to crime are a lack of suitable victims, and the chance of immediate application of effective and permanent behavioral modification techniques such as those I practice at the range.

Hey I think I like the sound of that... maybe I'll put it in my sig....

Come on, Casey... give it a rest. Drew has been pretty restrained lately. Don't egg him on again, huh? At least wait till he gets out of line again, and lighten up on the name calling just a bit. You aren't presenting ham radio's best face to the non-ham readers here. You are just picking on him because nobody will come to his defense. That is bullying. A bit more restraint is called for, don't you think? Read your posts, and tell me you would reccomend the neighbor's kids check out the ng for info on amateur radio. Not saying I haven't criticised the Drewster... but you must admit my criticism and that of most others has been mostly of his posts and not of him personally. Relax... pull out a cold one and chill out. Be human. It's Sunday. check out the funny papers and be mellow.

All correct. Of course, Thrower wouldn't know this since, by his own admission, he sold all his HF gear and is no longer active.

2534. Has anybody noticed (an observation on the ongoing Drew vs Casey feud)

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-17 00:00:00 UTC
From: thehamguy@aol.com
Message-ID: <1998051719265200.PAA21340@ladder03.news.aol.com>
Source record: 172102

Greetings, all! I decided to come back here in high hopes that things had improved since I left the group. Sad to see this isn't the case. Seems to have gotten worse.

After wading through all the posts of the past few weeks I have made an observation that I would like to share with the group. I am not looking for flames here. I do this simply in the hope of getting this settled so that we can get back to talking about ham radio on here. I see a pattern. "TheLibNet" posts a comment and is immediately attacked by Casey as "Drew". Nobody else responds. Only Casey. Then "Drew" and Casey go at it for a few days until "Drew" disappears. Again, nobody else responds. Just these two. After a few days of silence, Casey begins posting notes like "Where's Spew?" and "I'm not done with him yet." A few more days pass and then the whole process starts all over again. Usually on a weekend. Again, nobody but Casey ever responds nor mentions anything about "Drew." Only Casey.

Is it possible that Casey and TheLibNet are the same person? Is Casey creating a second persona and arguing with himself? Maybe not. But it sure looks that way.

For the benefit of non-AOL users, let the record show that TheLibNet has not filled out a user profile. This is simply another anonymous screen name--one of 5 allowed on each account. It is typical of AOL users who have NOT filled out profiles to demand identification from everyone else.

This has been a public service announcement. No response necessary. In fact, no further discussion is the best thing we can do at this point. I salute the other NG participants who have agreed among themselves to totally ignore TheLidNet hereafter.

I type this at 7:45 PM Central time (8:45 Eastern) on 16 May, 1998.
It is not yet even 10:00 Eastern time, and already K5BLB, along with
KK7HO and WA9KJI are already QRM-ing the frequency of 3950 kHz with
music and tape playing. What will it take to shut these ASSHOLES down?
A knuckle sandwich, or perhaps another form of "friendly persuasion?"

Hey, you QRM-ing ASSHOLES ---> Many SWL'ers like myself and hams alike
like to listen to the Liberty Net on Saturday night. If you do not like it,
then
give that big knob on your radio a good spin and go elsewhere.

You'd think the clowns mentioned above would have
better things to do with their time. Perhaps when someone
walks up to one of these schmucks at a ham fest and busts
one of them in the jaw, then mabey they'll get the message.

Do you mean to say that these "TRUE AMERICANS" are interfering with your right to speak freely, peaceably assemble, etc? Do they follow a liberal philosophy or what?

Suggestions:

Start flooding the FCC with complaints. When the FCC ignores you, and they certainly will, go to your congressman (republican or democrat, they are all the same) with a campaign donation in hand and a promise of more to follow.

Visit them in the middle of the night and pull down their towers.

Attention: ALL U.S. hams!

..AND READ ALL OF THIS NOW!!!!

THE 440 MHZ (AKA 70cm) HAM BAND MAY BE UNDER ATTACK!!!! THE LAND MOBILE COMMUNICATIONS COUNCIL (LMCC) HAS FILED A PETITION WITH THE FCC TO TAKE AWAY MOST OF OUR 70CM HAM BAND! PLEASE READ THE REST OF THIS AND FOLLOW THE INSTRUCTIONS TO DO YOUR PART NOW, NOT TOMORROW OR NEXT WEEK, NOW! THE FOLLOWING INFORMATION HERE HAS BEEN COMPILED BY REQUEST FROM SOME MEMBERS OF THE MARS REPEATER. I OBTAINED ALL OF THIS INFORMATION FROM THE ARRL. IF YOU WOULD LIKE TO VIEW IT DIRECTLY FROM THEIR WEB PAGE, PLEASE GO TO:

http://www.arrl.org

ALSO NOTE THAT NON-HAMS CAN ALSO PARTICIPATE IN THIS SINCE THIS CONCERNS SEVERAL ORGANIZATIONS WHICH HAVE NOTHING TO DO WITH AMATEUR RADIO. THEY CAN SIMPLY EXPRESS THEIR OPINIONS AS A MEMBER OF THAT ORGANIZATION OR A POTENTIAL FUTURE MEMBER WHO APPRECIATES THE SERVICE AMATEUR RADIO PROVIDES TO THE COMMUNITY. REMEMBER, IF WE LOSE OUR FREQUENCIES AND YOU DO NOTHING TO INTERVENE, YOU CANNOT COMPLAIN ABOUT IT AFTER THE FACT. PLEASE ACT NOW!!!!

IF YOU HAVE ANY QUESTIONS, PLEASE CALL ME OR SEND ME SOME E-MAIL.

THANK YOU,

GEORGE SFAIR, KJ6TQ
http://marsradio.org

(THIS IS FROM THE ARRL'S HOME PAGE)

RM-9267: A Threat to Amateur Radio Interests

On April 22, 1998, the Land Mobile Communications Council (LMCC) filed a petition for rulemaking with the Federal Communications Commission to have two-thirds of the 420-450 MHz band (70 cm) reallocated to the Private Mobile Radio Service. The petition is designated RM-9267, and the FCC is accepting public comment until June 1, 1998. The ARRL opposes the LMCC proposal. The 70 cm band is very popular among radio amateurs, and plays a critical role in our ability to provide emergency, public service, and public interest communications. The ARRL believes that the LMCC proposal is incompatible with continued amateur use of the band. RM-9267 is still only a proposal, and has not been acted upon by the government. We need your help in communicating our concerns to policy makers as they consider how to handle the LMCC's request.

Frequently Asked Questions About RM-9267

What is the LMCC? ---------- The Land Mobile Communications Council (LMCC) is a non-profit association of organizations representing users of land mobile radio systems, providers of land mobile services, and manufacturers of land mobile radio equipment. The user community includes public safety, business, industrial, private, common carrier, and land transportation radio users. The membership of LMCC includes the following organizations:

Association of American Railroads (AAR)
50 F Street, NW
Washington, D. C. 20001
202-639-2100

American Association of State Highway and Transportation Officials (AASHTO)
444 North Capitol Street, NW, Ste. 249
Washington, D. C. 20001
202-624-5800

American Automobile Association (AAA)
1000 AAA Drive
Heathrow, FL 32746

Why are they seeking more radio spectrum for land mobile radio? ----------
In response to a provision of the 1993 Omnibus Budget Act calling for regulatory parity among wireless Common Carriers and certain private wireless licensees that were providing service that was substantially similar to Common Carrier Service, the FCC developed separate definitions for Commercial Mobile Radio Services (CMRS) and Private Mobile Radio Services (PMRS). LMCC members mainly are interested in PMRS. They claim that the FCC is favoring CMRS over PMRS because CMRS licenses can be auctioned, generating substantial revenues for the Federal Treasury.

What is the actual proposal, and how would it affect Amateur Radio? ---------- Based on its own spectrum requirements analysis, LMCC claims that the future additional spectrum needs of the PMRS community are as follows: 15 MHz by the year 2000, 44 MHz (i.e., another 29 MHz) by 2004, and 125 MHz (i.e., another 81 MHz) by 2010. It proposes:

Immediate needs be satisfied by a reallocation of 420-430 MHz, paired with 440-450 MHz, from Federal use to PMRS;

Immediate/mid-term needs be satisfied by FCC allocation of 1390-1400, 1427-1432, and 1670-1675 MHz to PMRS, pursuant to its reallocation to the private sector from the government;

Reallocate 85 MHz of the aeronautical band, 960-1215 MHz, to the PMRS by the year 2010 to satisfy longer term needs, shared with the developing DOD JTIDS/MIDS service.

At present in the United States, the Amateur Radio Service is secondary to military radiolocation (radar) in the 420-450 MHz band. Originally a primary allocation, secondary status came about during the 1950s when Cold War concerns made national security a high priority. Limited non-government, non-amateur use of the band is permitted -- but amateurs have priority over such use. LMCC misinterprets the significance of amateur secondary status and states that "Amateur applications in the 420-430/440-450 MHz should remain secondary to PMRS." LMCC also suggests the possibility that, "recognizing that amateur radio service will see a net constriction by the recommended reallocation of 420-430/440-450 MHz," 1390-1395/1427-1432 MHz might be allocated to the amateur service to offset this constriction. "Constriction" is, of course, a bit of an understatement; LMCC has offered no ideas as to how amateurs could continue to share the bands.

What should amateurs do? ---------- First, what you shouldn't do: Don't complain to your Congressman about the FCC, or write a nasty letter to the FCC. The LMCC petition is a private-sector initiative, not a government

proposal. By law, the FCC has to put the petition on public notice and invite comment. That's all the FCC has done with it. Criticizing the FCC at this stage would be inappropriate and counterproductive.

Here is what you should do. ---------- 1. Examine the list of LMCC members. You may be a member of one or more of these organizations. If you are, write to that organization as a member and inform them that the LMCC, which has listed them as a member and supporter, has taken an action that is contrary to your interests. Don't assume that they know anything about the petition or its implications for Amateur Radio, but do make it clear that as a member, you expect them to disavow the LMCC petition insofar as it affects Amateur Radio. (A SAMPLE LETTER TO "TRIPLE A" IS AT THE END OF THIS)

2. Prepare a comment on RM-9267 and submit it to the FCC. At the top, it is very important that you clearly indicate the file number: RM-9267. Send an original and four copies to: Office of the Secretary, Federal Communications Commission, Room 222, 1919 M Street NW, Washington, DC 20554.

In your comment, explain how the loss of access to the 420-430/440-450 MHz band segments would affect you personally, and how it would affect the ability of radio amateurs in your community to provide needed public service. Even if you do not use these segments yourself, it is likely that loss of access would result in more crowding and interference in the part of the band, or in another band, that you do use. Don't overlook the fact that if you use linked voice or packet systems, it is quite likely that some of the links you rely on are in either or both of these segments.

3. If you are involved in amateur radio public service communications, arrange for the government and non-government agencies that you serve and ask for a written statement of their support.

4. Arrange for any Amateur Radio organizations that you belong to, to submit comments. This is especially important in the case of organizations with interests in the 420-450 MHz band.

What if, in spite of our comments, the FCC decides it likes the idea? ---------- The primary occupant of the 420-450 MHz band is the military. Before the FCC can take the next step toward reallocation, it must first obtain the agreement of the federal government. Then it would have to issue a Notice of Proposed Rule Making and must solicit public comments on its proposal. In other words, nothing is going to happen overnight and there will be at least one more opportunity for public comment.

It seems we hear about threats to the amateur bands all the time. How serious is this one?

The threat must be regarded as very serious. The LMCC is a bona fide and respected organization. We must assume that their proposal will be taken seriously.

Where can I get a copy of the LMCC petition?

The petition, with attachments, is 72 pages. It is available here as an Adobe Portable Document Format (PDF) file.

Prepared May 12, 1998, by the American Radio Relay League, Inc., as an information service to members.

ARRL, 225 Main Street, Newington, CT 06111 USA

HERE IS THE SAMPLE LETTER TO "TRIPPLE A"

American Automobile Association
1000 AAA Drive
Heathrow, FL 32746

Dear Sirs:

I have been a satisfied member of AAA-Connecticut since (the year). (Include your member number) Recently, however, I have learned that an organization of which AAA is a member has taken a position, allegedly with the support of AAA. that is contrary to my interests.

On April 22, the Land Mobile Communications Council filed a petition with the Federal Communications Commission (designated RM-9267) that seeks to reallocate the frequency bands 420-430 and 440-450 MHz for the use of the Private Mobile Radio Service. These bands are now heavily used by radio amateurs, operating in the Amateur Radio Service, for a variety of public service and public interest communications. The reallocation proposed by LMCC is incompatible with these operations.

As a licensed radio amateur for 35 years, I am dismayed by the LMCC proposal. I am even more dismayed to find that AAA, an organization I have long supported, is listed as an apparent sponsor of this proposal.

I ask you to determine whether AAA has, in fact, adopted a position in support of RM-9267, and if so, what steps can be taken to request reconsideration of this position. If AAA has not adopted a position in support of RM-9267, I request a written statement to that effect.

Thank you for your attention to this important matter.

Sincerely,

(You)

(GOOD LUCK, AND PLEASE DO THIS TODAY!!!!!!!)

I have an AEA CP-1 interface unit for RTTY, AMTOR, etc.
It is used with a Commodore 64 and MBA-TOR software.
I have not used the interface for several years now, and I would like to set it up to work with an IBM based PC. Does anyone know of a good software package that will allow me to use the CP-1 with an IBM computer. Or, am I better off scaping the whole interface and buying a new unit. I am mainly interested in AMTOR.

I can think of several effective although not necessarily legal ways to solve the problem. By the way, why is this being crossposted to alt.pirate.radio? We're talking about illegal amateur radio operators here, not pirate broadcasters.

** Replace "gateheap" with "g8eap" to respond by E-Mail**

BURY RADIO SOCIETY - LECTURE PROGRAMME 1998

The Bury Radio Society is pleased to announce its Lecture Programme for the remainder of 1998 as follows:-

9th June - "The CIA and RFE/Radio Liberty" Gordon Adams G3LEQ

14th July - Pedestrian Excursion with Radios

11th August - Vehicle Outing with Radios

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

The Lectures in May and June will commence at 8.00 pm but why not come along a little bit earlier and enjoy the Informal Gathering of Members from about 7.45 pm.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

73 de Keith G8EAP and G0WQD

Bury Radio Society, C/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB. Telephone 0161 761 2079 (Office Hours).

Burt your posts seem to focus on young girls, meeting them, talking to them, putting them in Fox Hunts. Was your pre-occupation with other women and their relationship to hams the reason for the demise of your FIRST marriage?

Perhaps if you spent more time taking care of your first wife, you wouldn't have had to look for another.

John Dinklemeyer gave his presentation on "DXing on the new 5 kHz band the easy way". Dinklemeyer, who goes by the call "John !", demonstrated proper operating practice by screaming to a volunteer in another room. Best DX so far is 2 city blocks, reports John.

At the other end of the spectrum, the daylight portion of the "DC to daylight" presentation was cancelled when a light switch became stuck.

ICW showed off its new portable rig. Developed in conjunction with a major producer of batteries, the handheld rig is said to have a range of 1/2 mile in the dark, and less in daylight. A keyer is available or just use your thumb.

In article <6jjrfm$8vu$1@nnrp1.dejanews.com>, burt@innocent.com says...

-I saw this statistic the other day RE: the number of people *KILLED*
-by guns per country in 1996
-I'm doing this from memory so the actual figures may be off a bit
-except for the USA but none of the following were over 200Japan - 60
-Austrailia - 70Canada - 120England - 70
-Countries Above have STRICT gun control laws

-USA - 9430 !!!!!!!

-Yeppers We NEED *MORE* guns *AND* easier access to them !!! More
-bloodshed that's what we need !!! More 11 and 13 year old boys
-BLASTING their schoolmates, just think in the Arkansas incident if
-their schoolmates (11 -13 year olds) had all been carrying say 9MM
-Glock17's and some 12 Ga "Streetsweepers" they could have retaliated
-with round after round of opposing fire until the police arrived. More
-GUNS that's the ANSWER !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Nazi Germany had strict gun control laws as well. Number of dead: 7 million.

Since you completely missed the point (you still talk about rg8 of any
kind) Here is the real point i tried to make.
Anyone that spents the time to read the specs of a $3k radio ought to
spend a litle time to investigate varius cables that cost litle and
are better than ANY rg8, like RG214 or RG 217.
If one can afford a $3K radio where is the (and why) savings on a
better cable.

VINTAGE FIELD DAY!!

Last month Barry announced the date - the weekend of June 13/14. This month after receiving input from a number of people, I'm announcing the rules. There was considerable opposition to the idea that VFD should be a contest, so we've deleted that part of it. Instead, we'll print reports from as many stations as we can fit into the August issue. The reports should consist of station logs (with all the usual information), descriptions of equipment used/power source/antennas, etc and of course we would like photos. Reports must be submitted to arrive here no later than July 15. Jim Hanlon, W8KGI, will be producing an article on the event and extracting material from the reports sent in. The rules are pretty darn basic: The event starts at 7 pm local time on Saturday, June 13, and ends at 7 pm local time on Sunday, June14. Incidentally, the first FD held back on the weekend of June 10/11, 1933, used the same starting and finishing times. All stations participating in VFD must use vintage tube-type equipment, operate CW or AM and fullfill the following, taken from the original 1933 rules, "Only portable stations, actually in the field, away from home addresses are eligible to submit field day scores". QST will have a mention of our VFD in their May issue and I'm asking everyone with a website to help publicize the event. Let's hope this VFD is a big success. Barry Wiseman, N6CSW

Are you delusional? I've never mentioned anything about a CW test.

2589. Re: The truth about gun owners

....

And those countries also have almost no Congoids, who, when left to their own devices with or without guns, commit violence far more often than other population groups.

Guns, on the other hand, when left to their own devices, kill no one.

The "liberal" theory, of course, is that race has nothing at all to do with it and that guns and poverty are to blame for violent crime.

So nearly all-White West Virginia, where the people are extremely poor and have an extremely high rate of gun ownership, should, according to the "liberal" theory, be a hotbed of violent crime.

Something must be wrong with the "liberal" theory.

With all good wishes,

Kevin, WB4AIO.

Who's gonna be whimpering when the Arbitron ratings come in and find
your show dead last in your market? You gonna start crying when you
have to move to Alaska where ratings don't matter? BWAHAHAHHAHAH!!!

A loser, plain and simple. We ran him off of HF, so now he sits here on the Internet all day, spamming the ham radio newsgroup with his whimpering, whining, and wannabeisms.
